SOURCES OF KNOWLEDGE USED IN INNOVATION: AN EXAMPLE OF ESTONIAN WOOD INDUSTRIES

KADRI UKRAINSKI
TABLE OF CONTENTS

THE LIST OF AUTHOR’S PUBLICATIONS AND CONFERENCE PRESENTATIONS....................................................... 8

INTRODUCTION ..................................................................................................................................................... 13

1. CATEGORIES AND SOURCES OF KNOWLEDGE USED IN THE INNOVATION ACTIVITIES OF THE FIRM ................................................................. 20
   1.1. Categories of knowledge used in innovation ................................................................. 20
       1.1.1. Theories dealing with the firm, knowledge and innovation: Basic concepts ................................................................. 20
       1.1.2. General categories of knowledge used in innovation ........................................... 27
       1.1.3. Object-specific categories of knowledge used in innovation ............................... 31
   1.2. Sources of knowledge for the innovative activities of a firm ........................................ 37
       1.2.1. Internal knowledge sources of a firm ................................................................. 37
       1.2.2. Business partners as external knowledge sources ............................................... 40
       1.2.3. Universities and R&D institutes as external knowledge sources ......................... 53
   1.3. Integrating the types and sources of knowledge used in innovation ............................ 59
       1.3.1. Synthesis of the types and sources of knowledge used for innovation in the context of the wood sector ................................................................. 59
       1.3.2. The substitutability and complementarity of knowledge sources .......................... 66

2. SOURCES OF KNOWLEDGE USED IN INNOVATION OF ESTONIAN WOOD SECTOR FIRMS ................................................................. 74
   2.1. Innovation activities in Estonian wood sector firms ...................................................... 74
       2.1.1. Data and methods ................................................................................................. 74
       2.1.2. Innovation activities in the Estonian wood sector 1990–2006 ............................. 80
       2.1.3. Use of knowledge sources in Estonian wood sector firms ................................... 94
   2.2. Innovation sources in Estonian wood sector companies ............................................. 98
       2.2.1. Research hypotheses ......................................................................................... 98
       2.2.2. Use of knowledge sources in the innovation processes of firms .......................... 107
       2.2.3. Factors determining the choice of innovation sources ........................................ 120
       2.2.4. The complementarity and substitutability of knowledge sources in innovation processes ........................................................................................................ 142
   2.3. Policy implications for fostering the knowledge transfer in the wood sector ................. 151
       2.3.1. General principles and practices in fostering knowledge exchange in the context of the Estonian wood sector ................................................................. 151

5
2.3.2. Estonian S&T policy in the context of the wood sector .......... 158
2.3.3. Simulation of innovation policy impacts on the basis of the
Estonian wood sector ................................................. 164

CONCLUSIONS AND DISCUSSION ........................................ 170

REFERENCES ..................................................................... 176

APPENDICES ................................................................... 191
Appendix 1. General categorisations of knowledge used in innovation .... 191
Appendix 2. Detailed categorizations of knowledge used in innovation .... 195
Appendix 3. Comparison of the samples of empirical analyses for
categorising knowledge ................................................. 201
Appendix 4. Intensity of use of different knowledge resources ............. 202
Appendix 5. Broad types and sources of knowledge ................................. 203
Appendix 6. Distribution of categories of knowledge used for innovation
by units of information ................................................... 204
Appendix 7. Distribution of knowledge used for innovation between
internal and external sources (%) ........................................... 205
Appendix 8. Distribution of categories of knowledge from external
sources (units) ................................................................. 206
Appendix 9. Relevance of sources of knowledge in the innovation
process (units) ................................................................. 207
Appendix 10. Relevance of sources of knowledge in the innovation
process (%) .................................................................. 208
Appendix 11. Relevance of sources of knowledge by sectors (%) .......... 209
Appendix 12. Relevance of public sector research (PSR) contacts by type
(%) ............................................................................. 216
Appendix 13. Questionnaire of ERIS innovation strategy study ............. 218
Appendix 14. List of interviewed firms and managers ................................. 221
Appendix 15. Results of the interviews ................................................... 222
Appendix 16. A set of initial research hypotheses ....................................... 226
Appendix 17. Descriptive statistics of CIS 4 sample ................................. 230
Appendix 18. Descriptive statistics of CIS 4 sample .................................... 231
Appendix 19. Estimated marginal means for the internal and concern
knowledge sources ........................................................ 233
Appendix 20. Estimated marginal means for the suppliers as knowledge
sources ....................................................................... 235
Appendix 21. Estimated marginal means for the customers as knowledge
sources ....................................................................... 237
Appendix 22. Estimated marginal means for the competitors as knowledge
sources ....................................................................... 238
