

**Advising on Research Methods:
A consultant's companion**

**Herman J. Adèr Gideon J. Mellenbergh
with contributions by David J. Hand**

Contents

Preface	13
I Preliminaries	19
1 Giving advice on research methods	21
(by David J. Hand)	21
1.1 The consulting environment	23
1.2 Communication	25
1.3 Problem formulation	30
1.4 The consultant's tools	33
1.5 Training consultants	37
1.6 Conclusion	37
1.7 Further reading	38
2 Methodological consultancy problems	39
(by Gideon J. Mellenbergh)	39
2.1 Design questions	40
2.2 Questions on measurement instruments	42
2.3 Data analysis questions	45
2.4 Questions concerning reporting	46
3 Methodological quality	49
(by Herman J. Adèr)	49
3.1 Research question and research plan	52
3.1.1 Literature assessment by systematic reviewing	52
3.2 Study design	55
3.2.1 Quality of the measurement instruments	57

3.3 Implementation and data collection	58
3.3.1 Data collection and data quality	59
3.3.2 Distributed data collection	59
3.4 Data quality	60
3.5 Data quality and data analysis	61
3.5.1 Data quality and consultation	63
3.5.2 Data quality in data mining	64
3.6 The interpretation of the analysis results	65
3.7 Methodological Quality in practical consultation	66
3.8 Further reading	67
Exercises	70
4 Dissemination and publishing	71
(by David J. Hand)	71
Further reading	77
Topics for classroom discussion	78
 II Sampling and Design	 81
5 Sampling	83
(by David J. Hand)	83
5.1 Background fundamentals	87
5.2 Sampling methods	89
5.3 Simple random sampling	91
5.4 Stratified sampling	94
5.5 Cluster sampling	97
5.6 Choice of sampling frame	99
5.7 Other issues	101
5.8 Further reading	104
Exercises	104
 6 General issues of research design	 107
(by Gideon J. Mellenbergh)	107
6.1 Scientific problems	108
6.2 Constraints	110
6.3 Elements of the systematic plan	111
6.3.1 Units	111
6.3.2 Variables	111

- 6.3.3 Measurement occasions 114
- 6.3.4 Precision 119
- 6.3.5 Generalization 121
- 6.4 Typical topics for consultation 125
- Exercises 126

- 7 Research designs: Description, exploration, prediction 129**
 (by Gideon J. Mellenbergh) 129
 - 7.1 State description 130
 - 7.2 Process description 132
 - 7.3 State exploration 134
 - 7.4 Process exploration 135
 - 7.5 State prediction 136
 - 7.6 Process prediction 140
 - Exercises 142

- 8 Research designs: Testing of research hypotheses 143**
 (by Gideon J. Mellenbergh) 143
 - 8.1 State hypothesis-testing problems 143
 - 8.1.1 Independent variable types 144
 - 8.1.2 Design types 146
 - 8.1.3 Data collection for hypothesis-testing designs 148
 - 8.1.4 Multiple substantive independent variables 149
 - 8.1.5 Background variables 151
 - 8.1.6 Null hypothesis testing 154
 - 8.1.7 Alternative explanations 156
 - 8.1.8 Prevention of alternative explanations
 in experimental designs 157
 - 8.1.9 Prevention of alternative explanations
 in quasi-experimental designs 164
 - 8.1.10 Prevention of alternative explanations
 in correlational designs 170
 - 8.1.11 Combining quantitative and qualitative studies for
 causal interpretations 172
 - 8.1.12 Giving advice on State hypothesis-testing problems 173
 - 8.2 Process hypothesis-testing problems 175
 - 8.2.1 Discussion topics
 (Process hypothesis-testing problems) 178
 - 8.3 Further reading 179
 - Exercises 179

III Measurement	181
9 Surveys	183
(by Gideon J. Mellenbergh)	183
9.1 Blueprint	184
9.2 Questions and response formats	185
9.2.1 Questions	185
9.2.2 Response formats	187
9.3 Administration modes	191
9.4 Question ordering	195
9.5 Pretests	195
9.5.1 Experts	196
9.5.2 Respondents and interviewers	196
9.5.3 Coders	197
9.6 Pilot	200
9.7 Nonresponse reduction	200
9.7.1 Unit nonresponse prevention	200
9.7.2 Item nonresponse prevention	204
9.8 Data processing	206
9.9 Discussion topics	208
9.10 Further Reading	208
Exercises	209
10 Tests and questionnaires:	
Construction and administration	211
(by Gideon J. Mellenbergh)	211
10.1 Blueprint	213
10.1.1 Construct Method	214
10.1.2 Facet Design Method	215
10.2 Item production	217
10.2.1 Test items	217
10.2.2 Questionnaire items	223
10.3 Pilot studies	230
10.4 First draft of the instrument	231
10.4.1 Test assembly	232
10.4.2 Questionnaire assembly	233
10.5 Administration modes	233
10.6 Try-out	234
Exercises	234

11 Tests and questionnaires: Analysis	235
(by Gideon J. Mellenbergh)	235
11.1 Data processing	236
11.2 Observed score analysis	237
11.2.1 Classical observed score analysis	237
11.2.2 Classical item analysis	241
11.3 Item response analysis	243
11.3.1 Linear item response functions	245
11.3.2 Logistic item response functions	250
11.3.3 Monotonically nondecreasing item response functions	255
11.4 Measurement invariance	258
11.5 Validation	259
11.6 Compound scores	261
11.6.1 The gain score	261
11.6.2 The product score	264
11.7 Consultation topics	264
11.8 Software	266
Exercises	267

IV Data analysis: Basics **269**

12 Modelling	271
(by Herman J. Adèr)	271
12.1 Hypothesis testing, estimation, prediction and modelling	273
12.1.1 Statistical hypothesis testing	273
12.1.2 Estimation	275
12.1.3 Prediction	277
12.1.4 Modelling	279
12.2 Statistical modelling	280
12.3 Methodological modelling	282
12.4 Justification versus discovery	283
12.4.1 Modelling in the context of justification	285
12.4.2 Modelling in the context of discovery	286
12.4.3 Methodological modelling and the contexts of justification and discovery	288
12.5 Fitting	289
12.6 Stepwise approaches	290
12.6.1 User control	292
12.7 Model search	293

12.7.1 Once more: User control	299
12.8 Practical issues	300
12.9 Further reading	302
Exercises	302
13 Missing and biasing information	305
(by Herman J. Adèr)	305
13.1 Bias caused by defects in sampling frame	307
13.2 Missing data	307
13.2.1 A Methodological versus a statistical view of the missing data problem	312
13.3 Imputation	314
13.4 Handling outlying observations	316
13.5 Hidden and overt bias	318
13.6 Randomization	319
13.7 Propensity scores	322
13.7.1 Estimating propensity scores	324
13.8 Confounding	326
13.9 Software	327
13.10 Further reading	329
Exercises	331
14 Phases and initial steps in data analysis	333
(by Herman J. Adèr)	333
14.1 Data maintenance	336
14.2 The initial data analysis (IDA) phase	337
14.2.1 Analyses to assess data quality	338
14.2.2 Analyses to assess measurement quality	341
14.2.3 Initial transformations	344
14.2.4 Has the implementation of the research design been successful?	344
14.2.5 Analyses aimed at establishing the structure of the sample	345
14.2.6 ‘Corrective actions’ and adapting the plans for the main analysis phase	345
14.3 Techniques used during IDA	346
14.3.1 Nominal and ordinal variables	349
14.3.2 Continuous variables	351
14.3.3 Costs. A special kind of continuous variable	354
Exercises	355

15 The main analysis phase	357
(by Herman J. Adèr)	357
15.1 Documentation	358
15.2 Comparability of measurements	359
15.3 Exploratory versus confirmatory approaches	360
15.3.1 Once more: Statistical modelling	362
15.4 The main and final analysis phase	363
15.5 Controlling and checking the stability of the results	368
15.5.1 Crossvalidation: analyses on strictly different cases	368
15.5.2 Sensitivity analysis: analyses on data of the same cases	369
15.6 Methodological aspects of bootstrapping	371
15.6.1 Situations in which bootstrap procedures are useful	373
15.6.2 Disadvantages and objections	375
15.7 Cross-sectional data analysis	375
15.7.1 Ordinal variables	375
15.7.2 Exploratory cross-sectional data analysis	376
15.7.3 *Confirmatory cross-sectional data analysis: the use of multilevel analysis	378
15.8 Effect studies	379
15.9 Analyzing change and the development over time	381
15.10 Further reading	383
Exercises	384

V Data analysis: Techniques **387**

16 The analysis of longitudinal designs	389
(by David J. Hand)	389
16.1 Preliminaries	391
16.2 Methods based on analysis of variance	394
16.2.1 The univariate analysis of variance approach to re- peated measures analysis	394
16.2.2 The multivariate analysis of variance approach to repeated measures analysis	397
16.3 General regression models	399
16.3.1 Regression approach with arbitrary covariance matrices	399
16.3.2 Multistage models	401
16.4 Non-normal data	404

16.5 Further issues	406
16.5.1 Survival analysis	407
16.6 The literature	408
16.7 Data analysis and software	411
16.8 Conclusion	412
Exercises	413
17 Regression analysis and beyond	415
(by Herman J. Adèr)	415
17.1 Regression analysis, analysis of covariance and multilevel analysis	416
17.2 Regression analysis	423
17.2.1 Regression diagnostics	425
17.2.2 Special topics in regression analysis	426
17.3 Univariate analysis of covariance	427
17.3.1 Reducing from complex to simple	429
17.3.2 Checks on assumptions at the end of the analysis cycle	432
17.3.3 Once more: Contrasts	434
17.3.4 Analysis of covariance	435
17.3.5 Covariates in the analysis of repeated measurements	436
17.4 When to use what?	440
17.5 Multivariate analysis of variance models	442
17.6 Multilevel analysis	443
17.6.1 Some technical remarks	447
17.7 The analysis of longitudinal data	448
17.7.1 Repeated measures analysis of variance	449
17.7.2 Repeated measures multilevel modelling and gener- alized estimating equations	451
17.8 Assessment of interobserver agreement	453
17.9 Software	456
17.10 Further reading	456
Exercises	458
18 Principal component and factor analysis	463
(by Herman J. Adèr)	463
18.1 Exploratory and confirmative factor analysis	464
18.2 Principal component analysis	467
18.3 Confirmatory factor analysis	478

18.4 Mokken's scale analysis	483
18.5 Special topics	484
18.6 Further reading	486
18.7 Software	486
Exercises	487
19 Epilogue: Structural equation modelling	489
(by Herman J. Adèr)	489
19.1 Structural equation modelling	491
19.2 Graphical modelling	496
19.3 Further reading	498
19.4 Software	499
Exercises	499
Appendices	503
A A submission process	503
B Functional notation	519
C Imputation: Theoretical background	525
D Standard software used in this book	527
Index	530
List of authors	546
References	553
