

**AN INTRODUCTION TO
MATHEMATICAL ANALYSIS
FOR
ECONOMIC THEORY
AND ECONOMETRICS**

Dean Corbae
Maxwell B. Stinchcombe
Juraj Zeman

PRINCETON UNIVERSITY PRESS

Contents

Preface	xi
User's Guide	xiii
Notation	xix
Chapter 1 ♦ Logic	1
1.1 Statements, Sets, Subsets, and Implication	1
1.2 Statements and Their Truth Values	3
1.3 Proofs, a First Look	6
1.4 Logical Quantifiers	9
1.5 Taxonomy of Proofs	11
Chapter 2 ♦ Set Theory	15
2.1 Some Simple Questions	16
2.2 Notation and Other Basics	17
2.3 Products, Relations, Correspondences, and Functions	21
2.4 Equivalence Relations	26
2.5 Optimal Choice for Finite Sets	28
2.6 Direct and Inverse Images, Compositions	33
2.7 Weak and Partial Orders, Lattices	39
2.8 Monotonic Changes in Optima: Supermodularity and Lattices	42
2.9 Tarski's Lattice Fixed-Point Theorem and Stable Matchings	49
2.10 Finite and Infinite Sets	56
2.11 The Axiom of Choice and Some Equivalent Results	62
2.12 Revealed Preference and Rationalizability	64
2.13 Superstructures	68
2.14 Bibliography	69
2.15 End-of-Chapter Problems	70
Chapter 3 ♦ The Space of Real Numbers	72
3.1 Why We Want More Than the Rationals	72
3.2 Basic Properties of Rationals	73
3.3 Distance, Cauchy Sequences, and the Real Numbers	75

3.4	The Completeness of the Real Numbers	82
3.5	Examples Using Completeness	87
3.6	Supremum and Infimum	90
3.7	Summability	92
3.8	Products of Sequences and e^x	99
3.9	Patience, Lim inf, and Lim sup	101
3.10	Some Perspective on Completing the Rationals	104
3.11	Bibliography	105
Chapter 4 ♦ The Finite-Dimensional Metric Space of Real Vectors		106
4.1	The Basic Definitions for Metric Spaces	107
4.2	Discrete Spaces	113
4.3	\mathbb{R}^ℓ as a Normed Vector Space	114
4.4	Completeness	120
4.5	Closure, Convergence, and Completeness	124
4.6	Separability	128
4.7	Compactness in \mathbb{R}^ℓ	129
4.8	Continuous Functions on \mathbb{R}^ℓ	136
4.9	Lipschitz and Uniform Continuity	143
4.10	Correspondences and the Theorem of the Maximum	144
4.11	Banach's Contraction Mapping Theorem	154
4.12	Connectedness	167
4.13	Bibliography	171
Chapter 5 ♦ Finite-Dimensional Convex Analysis		172
5.1	The Basic Geometry of Convexity	173
5.2	The Dual Space of \mathbb{R}^ℓ	181
5.3	The Three Degrees of Convex Separation	184
5.4	Strong Separation and Neoclassical Duality	186
5.5	Boundary Issues	194
5.6	Concave and Convex Functions	199
5.7	Separation and the Hahn-Banach Theorem	209
5.8	Separation and the Kuhn-Tucker Theorem	214
5.9	Interpreting Lagrange Multipliers	228
5.10	Differentiability and Concavity	232
5.11	Fixed-Point Theorems and General Equilibrium Theory	239
5.12	Fixed-Point Theorems for Nash Equilibria and Perfect Equilibria	245
5.13	Bibliography	258
Chapter 6 ♦ Metric Spaces		259
6.1	The Space of Compact Sets and the Theorem of the Maximum	260
6.2	Spaces of Continuous Functions	272
6.3	$\mathcal{D}(\mathbb{R})$, the Space of Cumulative Distribution Functions	293
6.4	Approximation in $C(M)$ when M Is Compact	297
6.5	Regression Analysis as Approximation Theory	304
6.6	Countable Product Spaces and Sequence Spaces	311

6.7	Defining Functions Implicitly and by Extension	321
6.8	The Metric Completion Theorem	331
6.9	The Lebesgue Measure Space	335
6.10	Bibliography	343
6.11	End-of-Chapter Problems	344
Chapter 7 ♦ Measure Spaces and Probability		355
7.1	The Basics of Measure Theory	356
7.2	Four Limit Results	370
7.3	Good Sets Arguments and Measurability	388
7.4	Two 0-1 Laws	397
7.5	Dominated Convergence, Uniform Integrability, and Continuity of the Integral	400
7.6	The Existence of Nonatomic Countably Additive Probabilities	411
7.7	Transition Probabilities, Product Measures, and Fubini's Theorem	423
7.8	Seriously Nonmeasurable Sets and Intergenerational Equity	426
7.9	Null Sets, Completions of σ -Fields, and Measurable Optima	430
7.10	Convergence in Distribution and Skorohod's Theorem	436
7.11	Complements and Extras	440
7.12	Appendix on Lebesgue Integration	448
7.13	Bibliography	451
Chapter 8 ♦ The $L^p(\Omega, \mathcal{F}, P)$ and ℓ^p Spaces, $p \in [1, \infty]$		452
8.1	Some Uses in Statistics and Econometrics	453
8.2	Some Uses in Economic Theory	456
8.3	The Basics of $L^p(\Omega, \mathcal{F}, P)$ and ℓ^p	458
8.4	Regression Analysis	474
8.5	Signed Measures, Vector Measures, and Densities	490
8.6	Measure Space Exchange Economies	498
8.7	Measure Space Games	503
8.8	Dual Spaces: Representations and Separation	509
8.9	Weak Convergence in $L^p(\Omega, \mathcal{F}, P)$, $p \in [1, \infty)$	518
8.10	Optimization of Nonlinear Operators	522
8.11	A Simple Case of Parametric Estimation	528
8.12	Complements and Extras	541
8.13	Bibliography	550
Chapter 9 ♦ Probabilities on Metric Spaces		551
9.1	Choice under Uncertainty	551
9.2	Stochastic Processes	552
9.3	The Metric Space $(\Delta(M), \rho)$	553
9.4	Two Useful Implications	562
9.5	Expected Utility Preferences	563
9.6	The Riesz Representation Theorem for $\Delta(M)$, M Compact	567
9.7	Polish Measure Spaces and Polish Metric Spaces	569
9.8	The Riesz Representation Theorem for Polish Metric Spaces	571

9.9	Compactness in $\Delta(M)$	574
9.10	An Operator Proof of the Central Limit Theorem	578
9.11	Regular Conditional Probabilities	583
9.12	Conditional Probabilities from Maximization	589
9.13	Nonexistence of rcp's	590
9.14	Bibliography	594
Chapter 10 ♦ Infinite-Dimensional Convex Analysis		595
10.1	Topological Spaces	595
10.2	Locally Convex Topological Vector Spaces	603
10.3	The Dual Space and Separation	606
10.4	Filterbases, Filters, and Ultrafilters	610
10.5	Bases, Subbases, Nets, and Convergence	612
10.6	Compactness	617
10.7	Compactness in Topological Vector Spaces	621
10.8	Fixed Points	624
10.9	Bibliography	626
Chapter 11 ♦ Expanded Spaces		627
11.1	The Basics of ${}^*\mathbb{R}$	628
11.2	Superstructures, Transfer, Spillover, and Saturation	632
11.3	Loeb Spaces	642
11.4	Saturation, Star-Finite Maximization Models, and Compactification	649
11.5	The Existence of a Purely Finitely Additive $\{0, 1\}$ -Valued μ	652
11.6	Problems and Complements	653
11.7	Bibliography	654
	Index	655
