Sari Yli-Kauhaluoma

Working on technology:  
A study on collaborative R&D work  
in industrial chemistry
## CONTENTS

### PART I: INTRODUCTORY ESSAY

#### 1 INTRODUCTION

1.1 The long way from laboratory to industry .......................... 3
1.2 Key contributions and implications of this study ..................... 7

#### 2 R&D COLLABORATION ................................................. 10

2.1 Prevailing research focus on R&D collaboration: Networks .......... 10
2.2 Dynamics of R&D collaboration: Beyond theoretical models? ....... 14

#### 3 COLLABORATIVE R&D WORK ........................................ 17

3.1 Community – a locus for work ...................................... 18
3.2 Practices – contents and characteristics of work .................... 23
   3.2.1 Sensible knowledge ............................................. 24
   3.2.2 Boundary practices ............................................. 29
   3.2.3 Temporalities at work ......................................... 35
3.3 Some related perspectives to practice-based approach .......... 38

#### 4 RESEARCH SETTING AND PROCESS .................................. 41

4.1 Research setting ......................................................... 41
4.2 Research strategy ....................................................... 44
4.3 Retrospective study: specifying my position .......................... 48
4.4 Key informants: whose voices are heard here? ......................... 51
4.5 The world of chemistry ................................................. 54
4.6 Reflections on interview situations .................................... 55
4.7 Qualitative analysis: learning the craftsmanship .................... 58
