Institutional Change
in a Varieties of Capitalism Context

How to Explain Shifts from Coordinated Market Economies
towards Liberal Market Economies in the 1990s

An Empirical Analysis of Cross-Country Data

Rainer Hampp Verlag München und Mering 2009
Contents

List of Tables x

List of Figures xii

I. Introduction - dealing with change in economic systems 1

II. Why is it a problem for the VoC theory to observe that some CMEs shifted towards LME-institutions during the 1990s? 10

1. The Varieties of Capitalism (VoC) approach 10
   1.1. VoC - Hall and Soskice’s theoretical concept 10
   1.2. Problems to conceptualise institutional change within the VoC theory 13
   1.3. VoC - criticism about crucial assumptions and empirical tests raise doubts about VoC-predictions 15

2. Research question - how to explain why some CMEs shifted towards LME-institutions during the 1990s? 17

III. Exploring the potential of VoC-categories for illuminating CME-LME shifts, further mechanisms and theories that can explain the issue 21

3. Can developments in VoC-dimensions explain change? 21
   3.1. Industrial relations system and education system 21
   3.2. Financial system and inter-firm relations 24
   3.3. Interim conclusion - developments in VoC-areas do not offer a conclusive explanation 25

4. Theories for studying institutional change beyond VoC-categories 26
   4.1. Change-inducing mechanisms - the current debate and a comment on how to treat cultural factors 26
   4.2. Douglas North’s transaction cost theory - why it suits while alternative approaches do not 35
   4.3. Culture and institutional change - a debated relationship that is not to be ignored when relying on North’s writings 42

IV. Developing hypotheses and operationalisations that adapt North’s transaction cost concept to CMEs and LMEs 65
5. North’s approach considers country-internal constraints to institutional change ........................................... 65
5.1. Informal constraints - the influence of socio-cultural factors on CMEs’ shifting (Hypotheses H1 to H4) ........... 65
5.2. Formal constraints - the influence of political, juridical, and property rights settings (Hypotheses H5 to H8) ... 76
6. Country-external factors - a critical evaluation of ‘globalisation’ as a pressure for LME shifts (Hypothesis H9) ..... 92

V. Empirical investigation - methodological choices and calculations for data adjustment ................................. 100
7. Permissible methods concerning hypotheses and data ................................................................. 100
7.1. Summary of well-known methods ................................................................................................. 104
7.2. Description of less generally established methods - Qualitative Comparative Analysis (QCA) and exact testing .... 106
8. Data adjustment and analysis ............................................................................................................. 120
8.1. [H1 to H4] Data source - World Values Study ............................................................................. 120
8.2. [H5 to H9] Index building ............................................................................................................. 121
8.3. [H5 to H9] Data and methodological adjustments ....... 125

VI. Results of the study - which factors can explain the LME shifts witnessed by several CMEs? .......................... 127
9. Logic of hypotheses testing, statistical hypotheses ............................................................................ 127
10. Country-internal constraints to CME-LME shifts: informal constraints ..................................................... 128
10.1. [H1 and H2] Results - Market-attitudes in the general population and in elite sub-samples cannot be shown to coincide with CMEs’ shifting .................................................. 128
10.2. [H3] Results - Elites are generally more ‘market-friendly’ than the general population ................. 138
10.3. [H4] Results - Systematic and considerable decline of market-acceptance ......................................... 144
11. Country-internal constraints to CME-LME shifts: formal constraints .................................................... 148
11.1. [H5] Results - Social system variables: ‘mover-CMEs’ could better afford LME shifting than ‘non-mover-CMEs’ 148
11.2. [H6] Results - Political system flexibility coincides with LME shifting - but is not essential for running an LME . 154
11.3. [H7] Results - Weak support for property rights’ influence, poor PR-protection may hamper CMEs’ shifting ....... 159
11.4. [H8] Results - No influence of juridical market-regulation on CMEs' development during the 1990s

12. Country-external factors - pressure for CME-LME shifts due to international economic integration?

12.1. [H9] Results - Increase in 'globalisation', distinct development pattern of 'mover-CMEs' suggest influence

13. Control Variables - Non-juridical market regulation not influential, legal traditions probably matter

14. Summary - the most relevant results and their relative importance

VII. Summary and conclusions - Studying institutional change in a Varieties of Capitalism framework

15. Challenges: Theories focus on institutions' stability not change, methodological restrictions in quantitative 'small-n' situations

15.1. Theoretical contributions

15.2. Methodological choices and contributions

16. Political flexibility and rising 'globalisation' seem to matter for LME shifts. What about VoC-stability and convergence ideas?

A. Statistical hypotheses - abbreviations in summary tables

B. Variables - content and sources
