

# **Monetary Macrodynamics**

**Toichiro Asada,  
Carl Chiarella,  
Peter Flaschel and  
Reiner Franke**

with contributions by  
Amitava Dutt/Peter Skott and Christian Proaño

 **Routledge**  
Taylor & Francis Group  
LONDON AND NEW YORK

# Contents

<b>General introduction</b>	1
<b>PART I</b>	
<b>Conventional AD–AS modeling</b>	13
<b>1 Models of growth, inflation and the real-financial market interaction</b>	15
1.1 <i>Disintegrated macro model building</i>	15
1.2 <i>Neoclassical growth theory and the long run</i>	19
1.2.1 The Solow model	20
1.2.2 Investment-driven growth	27
1.3 <i>Phillips curve transition dynamics in the medium run</i>	30
1.3.1 The model	31
1.3.2 Local and global dynamic behavior	34
1.3.3 Accelerating inflation, stagflation and monetary policy	39
1.3.4 Comments	42
1.4 <i>Short-run real-financial market interaction</i>	44
1.4.1 The textbook model	44
1.4.2 Keynes' Notes on the trade cycle	46
1.5 <i>Outlook: towards integrated macrodynamics</i>	50
References	52
<b>2 Neglected textbook results: IS-LM-PC inflation dynamics</b>	54
2.1 <i>Feedback channels and stability issues</i>	54
2.2 <i>Instantaneous real-financial market interaction</i>	60
2.3 <i>Medium-run IS-LM-PC dynamics</i>	63
2.4 <i>Multiple steady states and local stability analysis</i>	65
2.5 <i>Global analysis I: basic phase diagram properties</i>	68

- 2.6 *Global analysis II: kinked money wage Phillips curves* 71
- 2.7 *Numerical and empirical aspects of IS-LM-PC analysis* 76
- 2.8 *Zero interest rate bounds and full-employment ceilings* 83
- 2.9 *Policy rules for inflation targeting* 88
- 2.10 *Conclusions* 93
- References* 96
- Appendix: Stability analysis of some textbook models* 97

**3 Strange AS–AD outcomes: rational expectations inflation theory**

112

- 3.1 *The postulates of Classical economics* 112
- 3.2 *AS dynamics and the quantity theory of money* 115
- 3.3 *Employment cycles in neoclassical monetary growth* 116
- 3.4 *Employment cycles in Classical real growth* 122
- 3.5 *Neoclassical employment dynamics from a Classical perspective* 128
- 3.6 *AD–AS dynamics under myopic perfect foresight* 132
- 3.7 *Appended price dynamics and rational expectations?* 140
  - 3.7.1 *Only predetermined variables and nominal instability* 140
  - 3.7.2 *Real wage continuity, p-jumps and nominal stability* 142
- 3.8 *A critique of rational expectations* 145
- 3.9 *Outlook: gradual price adjustment processes* 149
- References* 154

**4 Taking Stock: Keynesian Dynamics and the AD–AS Framework**

156

*Amitava Dutt and Peter Skott*

- 4.1 *Introduction* 156
- 4.2 *The AD–AS framework* 156
- 4.3 *Shortcomings* 162
- 4.4 *The New Keynesian detour and the IKDD alternative* 166

- 4.4.1 Optimization 167
- 4.4.2 Stability and rational expectations 169
- 4.4.3 Dynamics and expectations in IKDD models 170
- 4.5 *Post-Keynesian, Structuralist and Neo-Marxian alternatives* 172
  - 4.5.1 A short-run AD–AS model 172
  - 4.5.2 The medium run: fairness and the ‘natural rate of unemployment’ 175
  - 4.5.3 The long run: growth, accumulation and technological change 176
- 4.6 *Conclusion* 178
- References* 179

## PART II

- Matured Keynesian AD–AS model building** 183
- 5 New Keynesian equilibrium vs. Keynesian disequilibrium dynamics: two competing approaches** 185
  - 5.1 *Introduction* 185
  - 5.2 *New Keynesian (Equilibrium) macrodynamics* 187
    - 5.2.1 The New Keynesian model with staggered wages and prices 187
    - 5.2.2 Determinacy analysis 188
  - 5.3 *Keynesian (Disequilibrium)AS–AD macrodynamics* 196
    - 5.3.1 A Keynesian (D)AS–AD model 196
    - 5.3.2 Local stability analysis 200
  - 5.4 *Concluding remarks* 204
  - References* 206
- 6 Beyond neoclassical syntheses: a baseline DAS–AD model** 209
  - 6.1 *Neoclassical syntheses* 209
  - 6.2 *Traditional AD–AS with myopic perfect foresight—a reminder* 212
  - 6.3 *Matured Keynesian model building: the DAS–AD baseline case* 216
  - 6.4 *Local stability analysis: the feedback-guided approach* 224
  - 6.5 *Real wage adjustment corrections and nominal interest rate policy rules* 229
  - 6.6 *On the role of downward money-wage rigidities* 233
  - 6.7 *Conclusion* 239

*References* 240

*Appendix I: Behavioral foundations* 241

*Appendix II: Proof to Section 6.6* 243

<b>7</b>	<b>DAS–DAD dynamics: respecification and estimation of the model</b>	<b>253</b>
	<i>Christian Proaño</i>	
	7.1 <i>Introduction</i>	253
	7.2 <i>A baseline semistructural macromodel</i>	254
	7.2.1 <i>The goods and labor markets</i>	254
	7.2.2 <i>The wage–price dynamics</i>	255
	7.2.3 <i>Monetary policy</i>	259
	7.3 <i>4D feedback-guided stability analysis</i>	262
	7.4 <i>Econometric analysis</i>	265
	7.4.1 <i>Model estimation</i>	265
	7.5 <i>Eigenvalue stability analysis</i>	273
	7.6 <i>Concluding remarks</i>	276
	<i>References</i>	278
<b>8</b>	<b>Applied DAD–DAS modelling: elaboration and calibration</b>	<b>281</b>
	8.1 <i>Introduction</i>	281
	8.2 <i>Econometric estimation: the point of departure</i>	283
	8.3 <i>Transforming the estimated equations into a closed dynamic system</i>	286
	8.3.1 <i>Output and employment adjustments</i>	286
	8.3.2 <i>Labour productivity as an endogenous variable</i>	288
	8.3.3 <i>Wage and price Phillips curves</i>	290
	8.3.4 <i>Reconsidering the monetary policy rule</i>	292
	8.3.5 <i>The 4D differential equations system</i>	294
	8.3.6 <i>The discrete-time formulation</i>	295
	8.4 <i>An improvement of the numerical coefficients</i>	297
	8.4.1 <i>A rough-and-ready calibration of the inflation climate</i>	297
	8.4.2 <i>Re-estimation of the Phillips curves</i>	300
	8.4.3 <i>Impulse-response functions as a more detailed evaluation criterion</i>	302
	8.4.4 <i>Variabilities in the stochastic economy</i>	305
	8.5 <i>Working with the model</i>	308
	8.5.1 <i>A cutback in workers’ ambitions</i>	308
	8.5.2 <i>Wage and price flexibility: eigenvalue analysis</i>	310
	8.5.3 <i>Wage and price flexibility: variabilities in the stochastic economy</i>	315

8.6 *Conclusion* 318

*References* 319
