Life Cycle Cost Analysis of Infrastructure Networks

The case of the German federal trunk roads
4.1.4 Predicting the depreciation and development of the net stock of fixed assets
   4.1.4.1 Stochastic depreciation with cyclical reinvestment (master functions) 64
   4.1.4.2 The “50%” hypothesis” 66
   4.1.4.3 Deterministic depreciation without cyclical reinvestment 67
4.1.5 Operational expenses 68
4.2 Application to the German federal trunk road network 69
   4.2.1 Gross asset value 69
      4.2.1.1 Linear elements 70
         4.2.1.1.1 Land acquisition 71
         4.2.1.1.2 Earthworks 72
         4.2.1.1.3 Equipments 73
         4.2.1.1.4 Superstructure 75
      4.2.1.2 Point-based objects 76
         4.2.1.2.1 Bridges 77
         4.2.1.2.2 Tunnels 79
         4.2.1.2.3 Service areas and lay-bys 80
         4.2.1.2.4 Maintenance depots 82
         4.2.1.2.5 Nodes 81
   4.2.2 Net asset value 82
      4.2.2.1 Land acquisition 82
      4.2.2.2 Earthworks 82
      4.2.2.3 Equipments 82
      4.2.2.4 Road surface 82
      4.2.2.5 Bridges 83
      4.2.2.6 Tunnels 83
      4.2.2.7 Service areas and lay-bys 83
      4.2.2.8 Maintenance depots 84
      4.2.2.9 Nodes 84
4.3 Predicting the infrastructure costs 84
4.4 Results of the calculation of the total cost 88

5 Cost allocation 95

5.1 Cost allocation principles 95
   5.1.1 Weight-dependent cost of use 95
   5.1.2 Weight-dependent cost of causation 96
   5.1.3 Capacity-related and proportional costs of causation/overhead 99
5.2 Distribution of the infrastructure cost according to the allocation principles 100
5.3 Cost allocation by constructive elements 103
5.4 Results of the cost allocation 104
6 Basic principles and recommendations for differentiating the toll

6.1 Basis for the differentiation 113
6.2 Estimating the development of mileage by emission class 115
6.3 Estimation of the development of the market penetration of particle filters for vehicles with diesel engines 119
6.4 Determining the spread of the toll rates 122
  6.4.1 Spread according to the current Toll Level Regulations (MautHV) 122
  6.4.2 Determining the spread of toll rates when taking into account particulate matter reduction classes 124

Annex: Sensitivity Analysis 127
