Christina Benita Wilke

German Pension Reform
On Road Towards a Sustainable Multi-Pillar System
Contents

1. Introduction 1

2. Demographic Challenges and Labor Market Potentials 9
   2.1. Introduction ................................................. 9
   2.2. Demographic Projections ..................................... 10
       2.2.1. Methodology and Scenarios .......................... 11
       2.2.2. Simulation Results ..................................... 13
   2.3. Projections on Future Labor Supply ......................... 16
       2.3.1. Modeling Labor Supply ................................. 17
       2.3.2. Scenarios ............................................. 18
       2.3.3. Simulation Results ..................................... 21
       2.3.4. Sensitivity Analysis ................................. 24
   2.4. Projections on Future Employment ......................... 29
       2.4.1. Introducing Labor Demand into the Model .............. 30
       2.4.2. Simulation Results ..................................... 31
   2.5. Conclusion .................................................. 36

3. A Quarter Century of Reforms 39
   3.1. Introduction .................................................. 39
   3.2. Basic Principles of the German Pension System .......... 40
       3.2.1. Coverage and Contributions .......................... 42
       3.2.2. Pension Benefits and Pension Levels .................. 42
   3.3. The German Pension Reform Process ....................... 48
       3.3.1. The 1992 and 1999 Reforms: Containing Early Retire-
               ment .................................................. 49
       3.3.2. The 2001 Reform: Shifting Towards a Multi-Pillar Sys-
               tem .................................................. 50
       3.3.3. The 2004 Reform: Introducing the Sustainability Factor 54
5. Internal Rates of Return of the German PAYG System 120
   5.1. Introduction ............................................. 120
   5.2. How to Measure Rates of Return ...................... 122
      5.2.1. The Internal Rate of Return ...................... 123
      5.2.2. The Deterministic Approach ...................... 125
      5.2.3. The Stochastic Approach ......................... 129
   5.3. Deterministic Projections on Future Rates of Return .. 133
      5.3.1. Data and Scenario Assumptions ................. 134
      5.3.2. Simulation Results ............................... 136
      5.3.3. Sensitivity Analysis .............................. 140
   5.4. Stochastic Projections on Future Rates of Return .... 143
      5.4.1. Probability Data ................................. 143
      5.4.2. A Stepwise Introduction of Stochastic Elements . 146
      5.4.3. Simulation Results ............................... 152
   5.5. Conclusion ............................................. 156

6. Summary and Concluding Remarks 159
   A. Variations of the 'Denmark' Scenario 163
   B. The German Public Pension System from Bismarck until Today 165
   C. Pension Level Concepts in the German PAYG System 169
   D. Riester Criteria for Certified Individual Pension Plans 171
   E. Investment Vehicles for Occupational Pension Plans in Germany 173
   F. Notes on Life Expectancy, Survival Rates and Rates of Return 175
   G. Notes on Expected Payments Flows and Expected Rates of Return 178
   H. Estimated Disability and Old Age Retirement Probabilities 181
