Arbitrage Theory in Continuous Time

THIRD EDITION

TOMAS BJÖRK
Stockholm School of Economics

OXFORD UNIVERSITY PRESS
## CONTENTS

1 Introduction .................................................. 1
   1.1 Problem Formulation .................................. 1

2 The Binomial Model .......................................... 5
   2.1 The One Period Model ................................... 5
       2.1.1 Model Description ................................. 5
       2.1.2 Portfolios and Arbitrage .......................... 6
       2.1.3 Contingent Claims ................................. 9
       2.1.4 Risk Neutral Valuation ............................. 11
   2.2 The Multiperiod Model .................................. 15
       2.2.1 Portfolios and Arbitrage .......................... 15
       2.2.2 Contingent Claims ................................. 17
   2.3 Exercises ................................................. 25
   2.4 Notes ...................................................... 25

3 A More General One Period Model ......................... 26
   3.1 The Model ............................................... 26
   3.2 Absence of Arbitrage ................................... 27
   3.3 Martingale Measures ..................................... 32
   3.4 Martingale Pricing ....................................... 34
   3.5 Completeness ............................................. 35
   3.6 Stochastic Discount Factors ............................ 38
   3.7 Exercises ................................................. 39

4 Stochastic Integrals .......................................... 40
   4.1 Introduction ............................................. 40
   4.2 Information .............................................. 42
   4.3 Stochastic Integrals ..................................... 44
   4.4 Martingales ................................................ 46
   4.5 Stochastic Calculus and the Itô Formula ............... 49
   4.6 Examples ................................................. 54
   4.7 The Multidimensional Itô Formula ...................... 57
   4.8 Correlated Wiener Processes ............................ 59
   4.9 Exercises ................................................. 63
   4.10 Notes ...................................................... 65

5 Differential Equations ....................................... 66
   5.1 Stochastic Differential Equations ..................... 66
   5.2 Geometric Brownian Motion ............................. 67
   5.3 The Linear SDE ........................................... 70
   5.4 The Infinitesimal Operator ............................. 71

CONTENTS

10.4 Completeness 149
10.5 Martingale Pricing 151
10.6 Stochastic Discount Factors 153
10.7 Summary for the Working Economist 154
10.8 Notes 156

11 The Mathematics of the Martingale Approach*
11.1 Stochastic Integral Representations 158
11.2 The Girsanov Theorem: Heuristics 162
11.3 The Girsanov Theorem 164
11.4 The Converse of the Girsanov Theorem 168
11.5 Girsanov Transformations and Stochastic Differentials 168
11.6 Maximum Likelihood Estimation 169
11.7 Exercises 171
11.8 Notes 172

12 Black–Scholes from a Martingale Point of View*
12.1 Absence of Arbitrage 173
12.2 Pricing 175
12.3 Completeness 176

13 Multidimensional Models: Classical Approach 179
13.1 Introduction 179
13.2 Pricing 181
13.3 Risk Neutral Valuation 187
13.4 Reducing the State Space 188
13.5 Hedging 192
13.6 Exercises 195

14 Multidimensional Models: Martingale Approach*
14.1 Absence of Arbitrage 196
14.2 Completeness 199
14.3 Hedging 200
14.4 Pricing 202
14.5 Markovian Models and PDEs 203
14.6 Market Prices of Risk 204
14.7 Stochastic Discount Factors 205
14.8 The Hansen–Jagannathan Bounds 205
14.9 Exercises 208
14.10 Notes 208

15 Incomplete Markets 209
15.1 Introduction 209
15.2 A Scalar Nonpriced Underlying Asset 209
15.3 The Multidimensional Case 218
15.4 A Stochastic Short Rate 222
CONTENTS

15.5 The Martingale Approach* 223
15.6 Summing Up 224
15.7 Exercises 227
15.8 Notes 228

16 Dividends 229
16.1 Discrete Dividends 229
   16.1.1 Price Dynamics and Dividend Structure 229
   16.1.2 Pricing Contingent Claims 230
16.2 Continuous Dividends 235
   16.2.1 Continuous Dividend Yield 236
   16.2.2 The General Case 239
16.3 The Martingale Approach* 241
   16.3.1 The Bank Account as Numeraire 242
   16.3.2 An Arbitrary Numeraire 243
16.4 Exercises 246

17 Currency Derivatives 247
17.1 Pure Currency Contracts 247
17.2 Domestic and Foreign Equity Markets 250
17.3 Domestic and Foreign Market Prices of Risk 256
17.4 The Martingale Approach* 260
17.5 Exercises 263
17.6 Notes 264

18 Barrier Options 265
18.1 Mathematical Background 265
18.2 Out Contracts 267
   18.2.1 Down-and-out Contracts 267
   18.2.2 Up-and-out Contracts 271
   18.2.3 Examples 272
18.3 In Contracts 276
18.4 Ladders 278
18.5 Lookbacks 279
18.6 Exercises 281
18.7 Notes 281

19 Stochastic Optimal Control 282
19.1 An Example 282
19.2 The Formal Problem 283
19.3 The Hamilton–Jacobi–Bellman Equation 286
19.4 Handling the HJB Equation 294
19.5 The Linear Regulator 295
19.6 Optimal Consumption and Investment 297
   19.6.1 A Generalization 297
   19.6.2 Optimal Consumption 299
CONTENTS

22.2 Interest Rates
  22.2.1 Definitions
  22.2.2 Relations between $df(t, T)$, $dp(t, T)$ and $dr(t)$
  22.2.3 An Alternative View of the Money Account

22.3 Coupon Bonds, Swaps and Yields
  22.3.1 Fixed Coupon Bonds
  22.3.2 Floating Rate Bonds
  22.3.3 Interest Rate Swaps
  22.3.4 Yield and Duration

22.4 Exercises

22.5 Notes

23 Short Rate Models
  23.1 Generalities
  23.2 The Term Structure Equation
  23.3 Exercises
  23.4 Notes

24 Martingale Models for the Short Rate
  24.1 $Q$-dynamics
  24.2 Inversion of the Yield Curve
  24.3 Affine Term Structures
    24.3.1 Definition and Existence
    24.3.2 A Probabilistic Discussion
  24.4 Some Standard Models
    24.4.1 The Vasicek Model
    24.4.2 The Ho–Lee Model
    24.4.3 The CIR Model
    24.4.4 The Hull–White Model
  24.5 Exercises
  24.6 Notes

25 Forward Rate Models
  25.1 The Heath–Jarrow–Morton Framework
  25.2 Martingale Modeling
  25.3 The Musiela Parameterization
  25.4 Exercises
  25.5 Notes

26 Change of Numeraire*
  26.1 Introduction
  26.2 Generalities
  26.3 Changing the Numeraire
  26.4 Forward Measures
    26.4.1 Using the $T$-bond as Numeraire
    26.4.2 An Expectation Hypothesis
CONTENTS

A.7 Hilbert Spaces 470
A.8 Sigma-Algebras and Generators 473
A.9 Product Measures 476
A.10 The Lebesgue Integral 477
A.11 The Radon–Nikodym Theorem 478
A.12 Exercises 482
A.13 Notes 483

B Probability Theory* 484
B.1 Random Variables and Processes 484
B.2 Partitions and Information 487
B.3 Sigma-algebras and Information 489
B.4 Independence 492
B.5 Conditional Expectations 493
B.6 Equivalent Probability Measures 500
B.7 Exercises 502
B.8 Notes 503

C Martingales and Stopping Times* 504
C.1 Martingales 504
C.2 Discrete Stochastic Integrals 507
C.3 Likelihood Processes 508
C.4 Stopping Times 509
C.5 Exercises 512
