Essays on Economic Fluctuations

Daniel Burren

Inauguraldissertation zur Erlangung der Würde eines

Doctor rerum oeconomiarum

der Wirtschafts- und Sozialwissenschaftlichen Fakultät

der Universität Bern

2009
Contents

Preface ................................................. 1

1 The Role of Sectoral Shifts in the Great Moderation ............... 3
  1.1 Introduction ........................................... 3
  1.2 GDP Growth and Volatility Revisited ........................ 6
    1.2.1 Linear Trend versus Break .......................... 7
    1.2.2 Non-linear Trend versus Break ....................... 10
    1.2.3 Annual Data ....................................... 13
  1.3 Sectoral Growth and Volatility ........................... 17
    1.3.1 The Data .......................................... 17
    1.3.2 Dynamics of Sectoral Growth and its Volatility ....... 18
    1.3.3 Monte Carlo Simulations with Counter-Factual Covariance
          Matrices ............................................. 26
  1.4 Wishart Specification .................................... 29
    1.4.1 Particle Filter ....................................... 33
    1.4.2 Implementation ..................................... 35
    1.4.3 Results ............................................. 37
  1.5 Conclusion ............................................. 46
  1.A Alternative ARCH-GARCH Specifications ....................... 49
  1.B Further Two-Period Monte Carlo Simulations ................... 51
  1.C Filtered Covariances of Durables .......................... 54
  1.D Filtered Standard Deviations ............................. 55
  1.E Alternative Wishart Specifications .......................... 58
4.2 A Benchmark New Keynesian Model .................................. 114
  4.2.1 Households ......................................................... 114
  4.2.2 Firms .............................................................. 115
  4.2.3 Stochastic Drivers ............................................... 116
  4.2.4 Flexible Price Equilibrium .................................... 116
  4.2.5 Monetary Policy .................................................. 117
  4.2.6 Sticky Price Equilibrium ....................................... 118

4.3 Linking the Economy and the Term Structure ........................ 118
  4.3.1 Market Prices of Risk and Time Varying Premium ............. 121

4.4 Estimation .............................................................. 122
  4.4.1 Data and Calibration ............................................. 122
  4.4.2 Econometric Method and Implementation ....................... 123

4.5 Results .................................................................. 126

4.6 Conclusion .............................................................. 128

4.A Appendix ................................................................. 129

Bibliography ................................................................ 143
