Climate policy and economic dynamics:
the role of substitution and technological change
Acknowledgements

Contents

1 Introduction
   1.1 The economics of climate change: a short introduction 2
      1.1.1 Optimal climate policy 3
      1.1.2 Design and consequences of climate policy 8
      1.1.3 Coalition formation 13
   1.2 Research questions and overview of thesis 15
      1.2.1 Part I of the thesis: Climate policy and optimal extraction of fossil fuels 16
      1.2.2 Part II of the thesis: Climate policy, input substitution, and technological change 19
      1.2.3 Main findings of this thesis 22

Part I: Climate policy and the optimal extraction of fossil fuels 25

2 Climate policy and the optimal extraction of high- and low-carbon fossil fuels 27
   2.1 The model 30
   2.2 The economy without (the prospect of) climate policy 31
   2.3 An unexpected emission constraint 33
   2.4 The empirical relevance of the "dirty-first condition" 37
## 4 Carbon leakage revisited: unilateral climate policy with directed technical change

- **4.1 The Model** .................................................. 102
- **4.2 Equilibrium** ............................................... 105
- **4.3 Unilateral climate policy and carbon leakage** ............... 107
  - **4.3.1 Carbon Leakage under undirected technical change** ....... 108
  - **4.3.2 Carbon leakage under directed technical change** .......... 111
- **4.4 Discussion and conclusions** ................................... 115

### Appendix
- **4.A Appendix: Model solution** .................................. 118
  - **4.A.1 Undirected technical change** ............................ 118
  - **4.A.2 Directed technical change** .............................. 119
- **4.B Appendix: The log-linearized model** ........................ 121
  - **4.B.1 Deriving the log-linearized model** ...................... 121
  - **4.B.2 Appendix to Proposition 4.4** ........................... 121
- **4.C Appendix: Existence and stability of the equilibrium** ....... 123

## 5 Production functions for climate policy modeling: an empirical analysis

- **5.1 Model specification** ........................................ 131
- **5.2 Econometric model and data** ................................ 136
- **5.3 Estimation results** ......................................... 137
  - **5.3.1 Cross-equation restrictions** ............................ 137
  - **5.3.2 Goodness of fit** ...................................... 138
  - **5.3.3 Elasticities of substitution** ............................ 138
  - **5.3.4 Technological change** ................................ 142
- **5.4 Discussion** ................................................ 145
- **5.5 Summary and conclusions** ................................... 147
- **5.A Appendix: Estimates for (KL)E without cross-equation restrictions** .. 148

**Bibliography** .................................................. 151

**Samenvatting: Klimaatbeleid en economische dynamica – de rol van substitutie en technologische verandering** .................... 161
