## Part I Dynamic Systems in Growth Models

### On Adequate Transversality Conditions for Infinite Horizon Optimal

|  |          |
|--|----------|
| <b>Control Problems—A Famous Example of Halkin . . . . .</b>       | <b>3</b> |
| Sabine Pickenhain  |          |
| 1 Introduction . . . . .   | 3        |
| 2 Problem Formulation . . . . .                                    | 4        |
| 2.1 Problem . . . . .  | 4        |
| 2.2 Weighted Sobolev Spaces . . . . .                              | 5        |
| 2.3 Lebesgue and Improper Riemann Integrals . . . . .              | 6        |
| 2.4 Problems with Lebesgue and Improper Riemann Integral . . . . . | 7        |
| 3 Optimality Criteria . . . . .                                    | 8        |
| 4 Duality Theory . . . . .   | 9        |
| 5 Examples . . . . .   | 14       |
| 5.1 The Example of Halkin . . . . .                                | 14       |
| 5.2 A Resource Allocation Problem . . . . .                        | 18       |
| 6 Conclusions . . . . .  | 21       |
| References . . . . .   | 21       |

### Sequential Precision of Predictions in Models of Economic Growth . . . . 23

Andrey A. Krasovskii and Alexander M. Tarasyev

|   |    |
|---|----|
| 1 Introduction . . . . .                            | 24 |
| 2 Methodological Scheme of the Research . . . . .   | 24 |
| 3 Model of Optimal Economic Growth . . . . .        | 25 |
| 3.1 Dynamics of Capital and Labor . . . . .         | 26 |
| 3.2 Dynamics of Useful Work per Worker . . . . .    | 26 |
| 4 Optimal Control Design of the Model . . . . .     | 27 |
| 4.1 Optimal Control Problem . . . . .               | 27 |
| 4.2 Saddle Character of the Steady State . . . . .  | 30 |
| 5 Nonlinear Stabilizers . . . . .                   | 31 |
| 5.1 Stabilizer of a Steady State . . . . .          | 31 |
| 5.2 Stabilizers of the Hamiltonian System . . . . . | 32 |
| 6 Simulation of the Model . . . . .                 | 34 |
