Principles of Supply Chain Management

Richard E. Crandall
William R. Crandall
Charlie C. Chen
PART I: OVERVIEW OF SUPPLY CHAIN MANAGEMENT

1  Evolution of Supply Chains.................................................................3
   Learning Outcomes.................................................................3
   What Is a Supply Chain? ..............................................................3
   Importance of SCM.................................................................5
   Evolution of Supply Chains .........................................................6
      Early Supply Chains .............................................................6
      Local Supply Chains .............................................................7
      Global Supply Chains ...........................................................8
   Changing Government Orientation..............................................11
      State-Controlled Governments ..............................................11
      Market-Driven Governments .................................................11
   Current Trends That Link Supply Chain Participants More Closely ..12
      Relationship Building ..........................................................12
         Customer Relationship Management ................................12
         Supplier Relationship Management ..................................13
         Product Lifecycle Management .........................................14
   Electronic Business .................................................................14
   Developing Economies .............................................................15
   Outsourcing ..................................................................................16
   Need for Quality Improvement ..................................................16
PART II: THE CUSTOMER PERSPECTIVE

3 Determining Customer Needs ........................................ 69
   Learning Outcomes .................................................. 69
   Introduction ......................................................... 69
   Group Customers into Homogeneous Segments .................. 71
   Determine the Needs of the Ultimate Consumer ............... 72
      Product Needs .................................................... 72
      Service Needs ................................................... 73
      Marketing Mix .................................................... 73
   Manufacturing and Service Supply Chains ....................... 74
   How Do You Accurately Determine Needs? ....................... 74
      Past History ...................................................... 75
         Market Research ............................................... 76
   Open System Scanning .............................................. 77
      Competition ...................................................... 77
      Technology ....................................................... 78
      Economy .......................................................... 79
      Government ....................................................... 80
      Social Trends .................................................... 81
      Business Environment ......................................... 81
   How Do You Forecast Demand? ..................................... 83
      Quantitative Forecasting Methods ............................. 83
         Time-Series Methods ........................................... 84
         Causal Method ................................................. 87
      Qualitative Forecasting Methods .............................. 89
         Survey Method .................................................. 89
         Delphi Method .................................................. 89
Contents

Characteristics of the Industry .................................................. 191
Customers and Markets .......................................................... 193
Outputs ................................................................................ 193
Inputs .................................................................................... 194
Transformation Process ......................................................... 194
Impact on Operations Management ........................................... 196
Designing the Retail Process ...................................................... 196
Strategic Orientation ............................................................... 197
Critical Design Points—Keys to Success .................................. 198
Additional Factors to Consider in Retail Store Design .......... 202
A Multidiscipline Project ......................................................... 202
Continuing Need to Readjust or Redesign ............................... 202
E-Commerce Considerations (Direct vs. Indirect Selling) ...... 203
Strategic or Long-Term Considerations ................................. 203
Managing a Retail Business ..................................................... 203
Determine the Expected Demand ............................................. 203
Plan Capacity to Meet Demand ............................................... 204
Implement the Operating Plan ................................................ 205
Measure Performance ........................................................... 205
Replan for the Next Period ...................................................... 206
Retail and Inventory Management ........................................... 206
Value ................................................................................. 206
Availability .......................................................................... 206
Variety ................................................................................. 206
Presentation .......................................................................... 206
Service ................................................................................ 207
Response Time ....................................................................... 207
Present Situation in Retailing ................................................... 207
Future in Retailing ................................................................. 209
Role of Wholesalers and DCs .................................................... 209
Ordering ............................................................................... 210
Receiving .............................................................................. 210
Stocking ............................................................................... 210
Picking .................................................................................. 211
Loading the Trucks ............................................................... 211
Transport to Stores ............................................................... 211
Unloading and Display at Stores .............................................. 211
Critical Success Factors for Distribution ............................... 212
Inventory within Distribution Functions ............................... 212
Inventory Management between Retailer and Distributor ...... 213
Technology in Distribution Functions ................................... 213
At the Retail Store ................................................................. 213
Movement of Goods .............................................................. 214
At the Distribution Center .................................................. 214
Positioning Services within the Distribution Functions .......... 215
  Pre-Sale Services ...................................................... 215
  Post-Sale Services .................................................... 215
  Role of Third-Party Service Providers .............................. 216
Predominant Delivery Methods ......................................... 216
  Truck—Privately Owned or Third-Party Carriers ................. 216
  Rail—For Selected Goods ............................................. 218
  Waterways .............................................................. 218
  Air ........................................................................... 218
  Pipeline ..................................................................... 219
  Parcel ........................................................................ 219
  Transmission Lines ....................................................... 219
  Fiber-Optic Cable Networks ............................................ 219
Third-Party Service Providers ............................................ 220
  Importance of RDCs .................................................... 220
  Trend toward Outsourcing the Distribution Function .......... 221
  Major Companies—UPS, FedEx, Ryder ............................. 222
Distribution Performance Measurement .............................. 222
  Financial Performance Measures .................................... 222
  Operating Performance Measures ................................... 222
  Collaboration Performance Measures ............................... 222
Retailer—Distributor Relationship ...................................... 223
Summary ........................................................................ 223
Discussion Questions ....................................................... 224
References ..................................................................... 224

7 Production and Service Processes ....................................... 227
Learning Outcomes .......................................................... 227
Introduction ................................................................... 227
Evolution of the Production Function ................................... 229
  From Craft to Mass Production .................................... 230
  From Mass Production to Mass Customization ............... 231
Critical Success Factors for Manufacturers ......................... 231
  Cost and Efficiency ..................................................... 232
  Quality ........................................................................ 232
  Responsiveness—Timing of Delivery ............................... 232
  Responsiveness—Product/Service Mix ............................ 232
  Flexibility .................................................................... 232
  Agility .......................................................................... 233
  Information Technology ............................................... 233
Manufacturing Strategies ................................................... 233
  Make-to-Stock ............................................................ 234
8 Procurement/Purchasing ........................................... 261
    Learning Outcomes ............................................ 261
    Introduction ..................................................... 261
    Role of Procurement in the Supply Chain ................. 262
    Traditional Purchasing ........................................ 263
    Contemporary Purchasing ...................................... 264
    Critical Success Factors for Procurement ................ 265
        Functionality ................................................. 265
        Availability ................................................. 265
        Cost .......................................................... 266
        Quality ....................................................... 266
        Match Inflow with Outflow ................................. 266
        Reduce Variances in Delivery .............................. 267
        Increase Supplier Dependability ........................... 267
        Reduce the Bullwhip Effect ................................. 267
        Become an Intercompany Facilitator .................... 268
        Find Sustainable Suppliers ................................. 268
    Changing Role of Purchasing ................................ 268
    Purchasing Functions ......................................... 271
        Product Design .............................................. 271
        Product Specifications .................................... 271
        New Product Introduction .................................. 272
        Target Costing ............................................... 274
        Supplier Selection .......................................... 275
        Supplier Location ........................................... 275
        Inventory Management ....................................... 276
        Purchasing Process ......................................... 277
        Supplier Evaluation ........................................ 278
        Supplier Relationship Management ....................... 278
        Supply Chain Coordination/Collaboration ............... 278
    Purchasing at Different Stages of the Supply Chain ...... 279
        Consumer ..................................................... 279
        Retail ......................................................... 279
Contents

Wholesale .......................................................... 280
Manufacturer ...................................................... 280
Mining and Agriculture ....................................... 281
Services ............................................................ 281

Dealing with Offshore Outsourcing ........................... 282
As a Strategic Concept ........................................ 282
TCO Considerations ............................................. 284
As a Project, with Project Management Needs ............. 284
Other Considerations—Intangible Costs and Public
Acceptance .......................................................... 285
Supplier Location as a Strategy for Entering an
Offshore Market .................................................. 285

Performance Measurement .................................... 286
Traditional—Positive Purchase Price Variance ............... 286
Contemporary—Enhanced Value from the Supply Chain for
the Consumer ..................................................... 286

Future of Purchasing ............................................. 287
Summary ............................................................ 288
Discussion Questions ............................................ 289
References .......................................................... 290

9 Reverse Supply Chains ........................................... 293
Learning Outcomes .............................................. 293
Introduction ....................................................... 293
Description of Reverse Supply Chain Networks ............. 293
Benefits of Reverse Logistics .................................. 295
Barriers to Reverse Logistics .................................. 295
Continuation of Forward Supply Chains ...................... 296
History of Reverse Logistics .................................... 298

Principal Drivers of the Movement ............................ 299
Individual Consumers .......................................... 299
Individual Businesses .......................................... 300
Society—The Community ...................................... 300
Society as a Group ................................................. 300
   Environmental Concerns ..................................... 301
   Resource Scarcity Concerns ................................ 301
Business Sector .................................................. 302
   Economic Benefits Possible ................................. 302
   New Businesses, Even New Industries, Possible ....... 302
Government—At All Levels ..................................... 303
Activities in Reverse Logistics .................................. 303
   Service—Assist Customer to Assure Proper Use of Product
   Returns—Product Is Intact and Needs Repackaging or
   Relocation ....................................................... 303
Contents

Restoration—Product Needs Minor Modification or Repair .......................... 304
Remanufacturing—Product Needs Overhaul and Major Rebuilding
Recycling—Product Components Needs Reconstitution as Part of Another Product .................. 305
Disposal—Product Remains Need to Return to Natural State ............. 305
Hazardous Waste Disposal ........................................................................ 305
Role of Private Industry .............................................................................. 306
New Paradigms in Product Design (Design for Sustainability) ............ 306
Design and Operate Green Supply Chains ............................................. 307
Develop Systems to Manage Reverse Logistics ...................................... 307
Participate in Joint Ventures to Seek Social Objectives ....................... 307
Role of Government .................................................................................... 308
Research—To Identify Threats and Opportunities ................................. 308
Legislation—To Standardize Business Requirements ............................. 310
Regulation—To Monitor Performance ...................................................... 311
Participation—To Encourage and Support Ongoing Programs ............. 312
Role of Consumer ....................................................................................... 312
Participant in RSC Programs .................................................................... 312
Educated Consumer .................................................................................... 312
Supporter of Green Supply Chain Efforts ................................................. 313
Reverse Logistics Network ......................................................................... 313
Continuation of the Forward Supply Chain .............................................. 313
Operate in an Open System Environment ................................................. 314
Heavily Outsourced by Major Businesses ................................................ 315
Support and Service .................................................................................. 315
Returns ....................................................................................................... 315
Repairs ........................................................................................................ 315
Remanufacture .......................................................................................... 316
Rework ....................................................................................................... 316
Recycle ....................................................................................................... 316
Need for a Lifecycle System Approach ...................................................... 316
Need for IT .................................................................................................. 319
Other Considerations in Designing Reverse Supply Chains .................. 319
Future ........................................................................................................... 320
Growth in Amount of Materials Recycled ................................................. 320
Increase in Number of Companies Performing Reverse Logistics Activities ........................................ 320
Joint Ventures between Private Business and Government .................. 321
Increased Emphasis on Prevention, Not Just Reusing ............................ 321
More Companies Will Design Integrated Reverse Logistics Systems ..... 321
PART IV: INTEGRATED SUPPLY CHAINS

10 The Need to Integrate

Expected Outcomes
Introduction
Setting the Stage
Obstacles to Integration
Status of Integration Efforts
From Mass Production to Mass Customization
From Craft to Mass Production
Prelude to Mass Customization
From Vertical Integration to Virtual Integration
From Homogeneous Cultures to Diverse Cultures
Drivers of Change
Global Competition
Global Markets
Economic Advantage
Lower Costs
Higher Revenues
Relationships and Trust among Supply Chain Participants
Trust between Individuals
Formal Contracts or Agreements
Common Interests or Projects (Enforced Trust)
Involves Change Management
Change Is Difficult within a Company
Embedded Culture
Policies and Procedures
Organization Structure
Customer Relationships
Supplier Relationships
Union Relationships
Change Is More Difficult for a Community
Company–Community Relationship
Difficulty in Changing Laws and Regulations
Difficulty in Changing Infrastructure
Change Is Most Difficult for an Entire Country
Political Implications
Regional Differences
Steps in the Integration Process

PART VI: THE FUTURE

16 Trends in Supply Chain Development and Management .......................... 509
   Learning Outcomes .............................................................................. 509
   From the Past to the Present ................................................................. 510
      From the American Revolution to World War II ............................. 510
      From World War II until the Present ............................................... 511
   Evolution of Critical Success Factors in the United States ................. 512
      Beginning (from First Settlements through 1800) ......................... 514
      Industrial Revolution (1840s–1890s) ............................................ 515
      Growth and Recovery (1890s–1930s) ............................................ 515
      Mass Production (1940s–1950s) ...................................................... 515
      Arisings (1960s–1970s) ................................................................. 516
      Awakening (1980s) ...................................................................... 516
      Globalization I (1990s) ................................................................. 516
      Globalization II and Mass Customization (2000 and After) ........... 516
   Major Drivers of Change in Supply Chains ......................................... 517
      Global Competition ......................................................................... 517
      Outsourcing .................................................................................... 518
      Increased Complexity and Risk ....................................................... 518
   Changes Needed in the Future ............................................................. 518
   Global Business Perspective ............................................................... 519
   Balanced Approach to Offshore Outsourcing ....................................... 520
      Total Cost of Ownership ................................................................. 520
      Risk Management .......................................................................... 521
      Other Issues .................................................................................. 521
   Continuing Changes in Technology ..................................................... 522
      Retail Operations ............................................................................ 522
      Demand Forecasting ...................................................................... 522
      Transportation and Distribution ....................................................... 523
      Information Systems ...................................................................... 523
      From Special-Purpose to General-Purpose Resources .................... 524
| Environment | 550 |
| Business Ethics | 551 |
| Product Safety | 551 |
| Social Equity | 552 |
| Infrastructure | 552 |

**Role of Third Parties** | 553 |
| Direct Support—Outsourcing | 553 |
| Indirect Support—Financing and Insurance | 553 |
| Advisory—Consulting and Training | 553 |
| Analyst—Measure Performance and Identify Needs | 553 |
| Manager—Virtual Holding Company | 554 |

**Future Technology—Information Technology Oriented** | 554 |
| ERP Extension | 554 |
| Service-Oriented Architecture | 555 |
| Internet Processes | 555 |
| Interorganizational Systems | 555 |
