List of Illustrations................................................................. xiii
Preface..................................................................................... xvii
Abstract.................................................................................. xix

1 Introduction ............................................................................. 1
  1.1 Background, Meaning, and Purpose of the Research .......... 1
    1.1.1 Background............................................................... 1
    1.1.2 Significance of the Topic............................................ 5
    1.1.3 Research Target ....................................................... 8
  1.2 Status of Research and Development.............................. 8
  1.3 Research and Technology Roadmap.................................. 11
    1.3.1 Main Content............................................................ 11
    1.3.2 Technical Route..................................................... 13
  1.4 Main Innovative Points and Characteristics..................... 14
    1.4.1 Main Innovative Points ........................................... 14
    1.4.2 Main Characteristics .............................................. 15

2 Study of the Grey Matrix Game Model Based on Pure Strategy ...... 17
  2.1 Study of the Simple Grey Matrix Game Model Based
    on Pure Strategy ................................................................ 17
    2.1.1 Construction of a Simple (Standard) Grey Matrix
      Game Model Based on Pure Strategy ................................. 18
      2.1.1.1 Analysis of a Grey Game Profit and Loss
        Value Matrix ................................................................. 18
      2.1.1.2 Size Comparison of Interval Grey Numbers .......... 19
      2.1.1.3 Modeling of Standard Grey Matrix Game .............. 23
    2.1.2 Solution of a Simple (Standard) Grey Matrix Game
      Model Based on Pure Strategy ............................................. 27
2.1.2.1 Concept of Pure Strategy Solution of a Standard Grey Matrix Game ........................................ 27
2.1.2.2 The Sufficient and Necessary Term and the Property of Pure Strategy Solution of Standard Grey Matrix Game ...................................................... 28
2.1.2.3 Relationship between Pure Strategies of Standard and Rigorous Standard Grey Matrix Games ............................................................. 31

2.2 Study of a Pure Strategy Solution of a Grey Matrix Game Based on Unilateral Strategy Analysis .................................................. 34
  2.2.1 Analysis of Grey Game Revenue Matrix ................................................. 34
  2.2.2 Model Construction ........................................................................... 34
  2.2.3 Case Study ....................................................................................... 38

2.3 Example Analysis of the Grey Matrix Game Model in Stock Speculation for Immediate Price-Margin Based on Pure Strategies ............................................................................. 39

3 Pure Strategy Solution of a Grey Matrix Game Based on an Interval Grey Number Not to Be Determined Directly .................................. 41
  3.1 Study of a Pure Strategy Solution and Risk of a Grey Matrix Game Based on Interval Grey Number Not to Be Determined Directly .............................................. 41
    3.1.1 Background .................................................................................. 41
    3.1.2 Judgment on the Relationship of the Superior, Inferior, and Equipollence Position Degrees That Include Mixed Ranges ........................................................................... 42
    3.1.3 The Position Optimum Pure Strategy Solutions and the Answers .................................................. 46
    3.1.4 Case Study .................................................................................. 48
    3.1.5 Summary .................................................................................. 49

  3.2 Study on Strategy Dominance and Its Optimum Solution of Grey Matrix Game Based on Interval Grey Numbers Not to Be Determined Directly ........................................................................ 50
    3.2.1 The Dominance Analysis of Position Optimum Pure Strategy ........................................................................ 50
    3.2.2 Case Study .................................................................................. 51
    3.2.3 Summary .................................................................................. 52

  3.3 Study of Risk of Position Optimum Pure Strategy Solution Based on a Grey Interval Number Matrix Game ........................................................................ 53
    3.3.1 Identity and Definition of Overrated and Underestimated Risks of Position Optimum Pure Strategy Solution ........................................................................ 53
Contents

3.3.2 Judgment of Position Optimum Pure Strategy Solution Risk ................................................................. 56
3.3.3 Summary ................................................................................................................................................. 61

4 Grey Matrix Game Model Based on Grey Mixed Strategy .......... 63
4.1 Grey Mixed Strategy and Grey Mixed Situation ..................... 63
  4.1.1 Background ........................................................................................................................................... 63
  4.1.2 Relation and Operation of Grey Events .......... 64
  4.1.3 Basic Concepts and Properties of Grey Interval Probability ........................................................................ 67
  4.1.4 Grey Mixed Strategy and Related Theorems ................. 72
  4.1.5 Summary ................................................................................................................................................. 75
4.2 Characterization of an Interval Grey Number and Improvement of Its Operation ..................................................... 75
  4.2.1 Background ........................................................................................................................................... 75
  4.2.2 Standard Interval Grey Number and Its Operation .......... 76
  4.2.3 The First and Second Standard Grey Numbers ........... 78
  4.2.4 Judgment of Quantitative Relations of Standard Grey Numbers ......................................................... 79
  4.2.5 Case Study ............................................................................................................................................ 81
  4.2.6 Summary ............................................................................................................................................... 83
4.3 The Maximum-Minimum Grey Game Value and the Grey Saddle Point of Grey Mixed Strategy ......................... 83
  4.3.1 Theorem of the Maximum-Minimum Grey Game Value ................................................................. 83
  4.3.2 Grey Saddle Point of Grey Mixed Strategy .......... 86
  4.3.3 Summary ................................................................................................................................................. 88
4.4 Properties of a Grey Mixed Strategy and Its Grey Linear Program Model ................................................................. 89
  4.4.1 Properties of a Grey Mixed Strategy .......... 89
  4.4.2 Grey Linear Program Model of Grey Matrix Game .......... 91
  4.4.3 The Concept of a Grey Linear Programming Model Solution of a Grey Matrix Game .................................. 92
  4.4.4 Summary ................................................................................................................................................. 95
4.5 Seeking Solutions of Grey Linear Programming Model of a Grey Matrix Game ..................................................... 95
  4.5.1 Grey Basis Feasible Solution Corresponds to the Vertex of a Grey Feasible Domain ................................. 95
  4.5.2 The Optimum Grey Game Value Corresponds to the Vertex of Grey Linear Programming Feasible Domain ...... 98
  4.5.3 Grey Linear Programming Solution Seeking of Optimum Grey Game Value ........................................... 102
  4.5.4 Summary ................................................................................................................................................. 106
5.1 Grey Vector Groups and Grey Linear Correlations .......................109
  5.1.1 Basic Concept of Grey Vectors and Grey Linear Combinations ..........109
  5.1.2 Grey Linear Correlation of Grey Vectors ................................113
  5.1.3 Theorems about Grey Vectors Grey Linear Correlation ... 114
  5.1.4 Summary ....................................................................116
5.2 Maximum Grey Vector Groups and the Rank of Grey Matrix ..........117
  5.2.1 Basic Theorems about Grey Vector Group Grey Linear Correlations ........117
  5.2.2 Grey Vector Groups and Grey Rank of a Grey Matrix .........122
  5.2.3 Summary ....................................................................128
5.3 The Elementary Transformation of the Grey Matrix and Its Grey Invertible Matrix .........................................................128
  5.3.1 The Elementary Transformation of the Grey Matrix .........128
  5.3.2 Grey Invertible Matrix .....................................................135
  5.3.3 Summary ....................................................................140

6 Matrix Solution Method of a Grey Matrix Game .........................141
6.1 Matrix Solution Method of a Grey Matrix Game Based on a Grey Full-Rank Expanding Square Matrix .................................141
  6.1.1 Concept of an Expanding Square Matrix and Its Grey Inverse Matrix .................................................................141
  6.1.2 Optimum Grey Game Strategy and Grey Game Value of Player 1 ..............................................................147
  6.1.3 Optimum Grey Game Strategy and Grey Game Value of Player 2 ..............................................................150
  6.1.4 Optimum Grey Game Strategy and Grey Game Value of Players Based on a Combined Grey Full-Rank Expanding Square Matrix ..............................................................152
  6.1.5 Summary ....................................................................157
6.2 Construction of an Analogous Grey Full-Rank Expanding Square Matrix and Its Necessary and Sufficient Conditions ............158
  6.2.1 Construction of an Analogous Grey Full-Rank Expanding Square Matrix ........................................................158
  6.2.2 Necessary and Sufficient Conditions of Full Rank for an Analogous Grey Expanding Square Matrix .........................160
  6.2.3 Full-Rank Treatment of an Analogous Grey Rank- Decreased Expanding Square Matrix ........................................162
  6.2.4 Summary ....................................................................166
Contents

6.3 Compound Standard Grey Number and $G(\otimes)$'s Infeasible Solution, Feasible Solution, and Optimal Solution Matrix 166
   6.3.1 Concept of Compound Standard Grey Numbers and Their Determination 166
   6.3.2 Concepts of Grey Optimal Solutions, Feasible Solutions, and Infeasible Solution Matrix 169
   6.3.3 Sufficient and Necessary Condition of the Existence of a Grey Optimal Solution Square Matrix 173
   6.3.4 Summary 175

6.4 $G(\otimes)$'s Redundant Constraint, Zero Strategy Variables, and Grey Matrix Solving Method 176
   6.4.1 Zero Strategy Variables in an Infeasible Solution Square Matrix 176
   6.4.2 Redundant Constraint Equation and Zero Strategy Variables in a Nonsquare Matrix 178
   6.4.3 Optimal Grey Game Solution in a Nonsquare Matrix 180
   6.4.4 $A(\otimes)_{m \times n}$'s Inferior Strategy and Its Redundant Constraint and Zero Strategy Variable 182
   6.4.5 $G(\otimes)$'s Grey Matrix Method Solving Steps 184
   6.4.6 Summary 186

7 Potential Optimal Strategy Solution's Venture and Control Problems Based on the Grey Interval Number Matrix Game 187
   7.1 Study of the Venture Problem of a Potential Optimal Pure Strategy Solution for the Grey Interval Number Matrix Game 187
      7.1.1 Optimal Potential Pure Strategy Solution of a Grey Interval Number Matrix Game 187
      7.1.2 Measurement of the Optimal Potential Pure Strategy Solution 193
      7.1.3 Conclusions 198
   7.2 Venture and Control Problems of an Optimal Mixed Strategy for a Grey Interval Number Matrix Game 198
      7.2.1 Recognition and Definition of the Overrated and Underrated Risks of the Potential Optimum Mixed Strategy Solution 198
      7.2.2 Measurement for Maximal Overrated and Underrated Risks of the Potential Pure Strategy Solution 200
      7.2.3 Information Venture Control Ability and Venture Control of Game $G(\otimes)$ 204
      7.2.4 Summary 206
8 Concession and Damping Equilibriums of Duopolistic Strategic Output-Making Based on Limited Rationality and Knowledge

8.1 Duopoly Strategic Output-Making Model Based on the Experienced Ideal Output and the Best Strategy Decision-Making Coefficient

8.2 Concession Equilibrium of the Later Decision-Maker under Nonstrategic Extended Damping Conditions: Elimination from the Market

8.3 Damping Equilibrium of the Advanced Decision-Maker under Strategic Extended Damping Conditions: Giving Up Some Market Share

8.4 Damping Loss and the Total Damping Cost When the First Decision-Making Oligopoly Has Occupied the Market Completely

8.5 Summary

9 Nash Equilibrium Analysis Model of Static and Dynamic Games of Grey Pair-Wise Matrices

9.1 Nash Equilibrium of Grey Potential Pure Strategy Analysis of N-Person Static Games of Symmetrical Information Loss

9.1.1 Nash Equilibrium of Grey Potential Pure Strategy

9.1.2 Analyzing Methods of Absolute Grey Superior and Inferior Potential Relationships of Game G(®)

9.1.3 Analysis of Relative Grey Superior and Inferior Relationships in Game G(®)

9.1.4 Summary

9.2 Solving the Paradox of the Centipede Game: A New Model of Grey Structured Algorithm of Forward Induction

9.2.1 Backward Grey Structured Algorithm of a Dynamic Multistage Game's Profit Value

9.2.2 The Termination and Guide Nash Equilibrium Analysis of Grey Structured Algorithm of Forward Induction in a Multistage Dynamic Game

9.2.3 Summary

10 Chain Structure Model of Evolutionary Games Based on Limited Rationality and Knowledge

10.1 Chain Structure Model of Evolutionary Games Based on a Symmetric Case

10.1.1 Establishing a Chain Structure Model for Evolutionary Games

10.1.2 Imitation of Dynamic Process of Duplication and ESS
10.1.3 Initial State and Analysis of Replication Dynamics ........................................ 262
10.1.4 Summary ........................................................................................................... 264

10.2 Chain Structure Models of Evolutionary Games Based on an Asymmetric Case ........................................... 264
10.2.1 Analysis of the Chain Structure Model of Evolutionary Games ......................... 264
10.2.2 Establishing Chain Structure Model for Evolutionary Game .................................. 266
10.2.3 Imitation of Dynamic Process of Duplication and ESS ........................................ 269
10.2.4 Initial State and Analysis of Replication Dynamics ........................................... 271
10.2.5 Summary ........................................................................................................... 273

10.3 Chain Structure Models of Grey Evolution of Industry Agglomeration and Stability Analysis ........................................... 273
10.3.1 Research Background ....................................................................................... 273
10.3.2 Establishing a Chain Structure Model for the Evolutionary Game of Industry Agglomeration Development ........................................... 274
10.3.2.1 Company Learning Mechanisms .................................................................. 274
10.3.2.2 Model Construction ................................................................................... 274
10.3.3 Duplication Dynamic Simulation of the Development of Industry Agglomeration ........................................................................... 277
10.3.4 Stability Analysis of the Industry Agglomeration Formation and Development ........... 278
10.3.5 Summary ........................................................................................................... 282

11 Bounded Rationality Grey Game Model of First-Price Sealed-Bid Auction ........................................... 285
11.1 Optimal Grey Quotation Model Based on an Evaluation of Accurate Value and Experiential Ideal Quotation ........................................................................... 285
11.1.1 Conditions of Optimal Grey Quotation Model ................................................... 286
11.1.2 Design of Grey Quotation and Grey Expected Utility Model ................................ 288
11.1.3 Simulation and Analysis of Optimal Grey Quotation and Grey Expected Utility Model ........................................................................... 292
11.1.4 Summary ........................................................................................................... 293
11.2 Optimal Grey Quotation Model Based on Evaluation of Grey Value and Grey Experiential Ideal Quotation ........................................................................... 294
11.2.1 Conditions of Optimal Grey Quotation Model ................................................... 294
11.2.2 Design of Grey Quotation and Grey Expected Utility Model ................................ 296
11.2.3 Simulation and Analysis of Optimal Grey Quotation and Grey Expected Utility Model ........................................................................... 300
11.2.4 Summary ........................................................................................................... 302
11.3 Choice of Stock Agent: A First-Price Sealed-Bid Auction Game Model Based on Bounded Rationality ........................................................................... 303
11.3.1 Construction of Optimal Quoted Price Model of Stock Dealers ......................................................... 304
11.3.2 Model Imitation of Optimization Quoted Price and Expectation Utility and Analysis of the Main Conclusions ........307
  11.3.2.1 Model Imitation ................................................................. 307
  11.3.2.2 Analysis of the Imitation Conclusions .................. 310
11.3.3 The Strategy in the Bid Process of Stock Dealership ............ 310
  11.3.3.1 Strategy 1: To Enhance Bidder's Approval Degree to Enterprise Stock Dealership ...................... 311
  11.3.3.2 Strategy 2: To Construct Favorable Environment for Auction of Stock Dealership ...................... 312
11.3.4 Summary .............................................................................. 312

12 Summary and Prospect ................................................................. 313
  12.1 Summary .............................................................................. 313
  12.2 Research Prospects .............................................................. 316
    12.2.1 Research on Grey Matrix Game's Optimal Mix Strategy Solution Algorithm .................................. 317
    12.2.2 Venture Control Problem of the Optimal Grey Matrix Game Solution ............................................. 319
    12.2.3 Solution of a Subsidiary Game's Grey Potential ........... 320

References ......................................................................................... 321
