Volatility and Time Series Econometrics: Essays in Honor of Robert F. Engle

Edited by
Tim Bollerslev, Jeffrey R. Russell,
and Mark W. Watson

OXFORD UNIVERSITY PRESS
Contents

Introduction x

1 A History of Econometrics at the University of California, San Diego: A Personal Viewpoint 1
   Clive W. J. Granger
   1 Introduction 1
   2 The Founding Years: 1974–1984 1
   3 The Middle Years: 1985–1993 3
   4 The Changing Years: 1994–2003 4
   5 Graduate students 6
   6 Visitors 6
   7 Wives 8
   8 The Econometrics Research Project 8
   9 The UCSD Economics Department 8
  10 The way the world of econometrics has changed 8
  11 Visitors and students 9

2 The Long Run Shift-Share: Modeling the Sources of Metropolitan Sectoral Fluctuations 13
   N. Edward Coulson
   1 Introduction 13
   2 A general model and some specializations 14
   3 Data and evidence 21
   4 Summary and conclusions 33

3 The Evolution of National and Regional Factors in US Housing Construction 35
   James H. Stock and Mark W. Watson
   1 Introduction 35
   2 The state building permits data set 38
   3 The DFM-SV model 45
### Contents

4 Empirical results .......................... 49
5 Discussion and conclusions ................. 60

#### 4 Modeling UK Inflation Uncertainty, 1958–2006
*Gianna Boero, Jeremy Smith, and Kenneth F. Wallis*

1 Introduction ................................ 62
2 UK inflation and the policy environment ... 63
3 Re-estimating the original ARCH model ... 66
4 The nonstationary behavior of UK inflation 69
5 Measures of inflation forecast uncertainty 73
6 Uncertainty and the level of inflation .... 77
7 Conclusion ................................... 78

#### 5 Macroeconomics and ARCH
*James D. Hamilton*

1 Introduction ................................ 79
2 GARCH and inference about the mean .... 81
3 Application 1: Measuring market expectations of what the Federal Reserve is going to do next 87
4 Application 2: Using the Taylor Rule to summarize changes in Federal Reserve policy 91
5 Conclusions ................................ 95

#### 6 Macroeconomic Volatility and Stock Market Volatility, World-Wide
*Francis X. Diebold and Kamil Yilmaz*

1 Introduction ................................ 97
2 Data ........................................ 99
3 Empirical results ............................ 100
4 Variations and extensions ................. 105
5 Concluding remark ......................... 109

#### 7 Measuring Downside Risk – Realized Semivariance
*Ole E. Barndorff-Nielsen, Silja Kinnebrock, and Neil Shephard*

1 Introduction ................................ 117
2 Econometric theory ......................... 122
3 More empirical work ....................... 128
4 Additional remarks ......................... 131
5 Conclusions ................................ 133
8 Glossary to ARCH (GARCH) 137
Tim Bollerslev

9 An Automatic Test of Super Exogeneity 164
David F. Hendry and Carlos Santos

1 Introduction 164
2 Detectable shifts 166
3 Super exogeneity in a regression context 170
4 Impulse saturation 173
5 Null rejection frequency of the impulse-based test 175
6 Potency at stage 1 179
7 Super-exogeneity failure 181
8 Co-breaking based tests 186
9 Simulating the potencies of the automatic super-exogeneity test 186
10 Testing super exogeneity in UK money demand 190
11 Conclusion 192

10 Generalized Forecast Errors, a Change of Measure, and Forecast Optimality 194
Andrew J. Patton and Allan Timmermann

1 Introduction 194
2 Testable implications under general loss functions 196
3 Properties under a change of measure 200
4 Numerical example and an application to US inflation 202
5 Conclusion 209

11 Multivariate Autocontours for Specification Testing in Multivariate GARCH Models 213
Gloria González-Rivera and Emre Yoldas

1 Introduction 213
2 Testing methodology 215
3 Monte Carlo simulations 219
4 Empirical applications 224
5 Concluding remarks 230

12 Modeling Autoregressive Conditional Skewness and Kurtosis with Multi-Quantile CAViaR 231
Halbert White, Tae-Hwan Kim, and Simone Manganelli

1 Introduction 231
2 The MQ-CAViaR process and model 232
