Implementing Models of Financial Derivatives

Object Oriented Applications with VBA

Nick Webber
## Contents

Preface

PART I  A PROCEDURAL MONTE CARLO METHOD IN VBA

1 The Monte Carlo Method
   1.1 The Monte Carlo valuation method
   1.2 Issues with Monte Carlo
   1.3 Computational issues
   1.4 Summary
   1.5 Exercises

2 Levels of Programming Sophistication
   2.1 What makes a good application?
   2.2 A high-level design
   2.3 Progressing towards the ideal
   2.4 Summary
   2.5 Exercises

3 Procedural Programming: Level 1
   3.1 Designing a Monte Carlo valuation application
   3.2 Deficiencies of the level 1 code
   3.3 Summary
   3.4 Exercises

4 Validation and Error Handling: Level 2
   4.1 Validation and error handling
   4.2 Encapsulating functionality
   4.3 The level 2 main()
   4.4 Summary
   4.5 Exercises

## PART II  OBJECTS AND POLYMORPHISM 53

### 5  Introducing Objects: Level 3 55

5.1 Objects in VBA 55  
5.2 An example: The *StopWatch* object 63  
5.3 Further helpful VBA features 65  
5.4 Objects in the Monte Carlo application 67  
5.5 Summary 78  
5.6 Exercises 78  

### 6  Polymorphism and Interfaces: Level 4 81

6.1 Polymorphism 81  
6.2 Interfaces in VBA 84  
6.3 Implementing a polymorphic stopwatch 86  
6.4 Polymorphism and the Monte Carlo application 88  
6.5 Assessment of the polymorphic design 100  
6.6 Summary 102  
6.7 Exercises 102  

### 7  A Slice-Based Monte Carlo 107

7.1 The revised Monte Carlo application object 107  
7.2 The option object 109  
7.3 The *evolver* object 113  
7.4 Summary 116  
7.5 Exercises 116  

### 8  An Embryonic Factory: Level 5 119

8.1 Events 119  
8.2 The Level 5 Monte Carlo application 122  
8.3 The *Factory* object 127  
8.4 Output 130  
8.5 Summary 133  
8.6 Exercises 133  

## PART III  USING FILES WITH VBA 135

### 9  Input and Output to File in VBA 137

9.1 File handling in VBA 137  
9.2 The *TextStream* and *FileSystemObject* objects 138  
9.3 Intrinsic VB language functions 143  
9.4 Example: Reading and writing to sequential and random files 145  
9.5 Summary 151  
9.6 Exercises 151  

### 10  Valuing a Book of Options 153

10.1 Outline of the application 153  
10.2 Timings 174
### Contents

10.3 Summary 176  
10.4 Exercises 176  

**PART IV POLYMORPHIC FACTORIES IN VBA**

11 The VBE Object Library and a Simple Polymorphic Factory 179  
11.1 Using the VBE object library 179  
11.2 A simple factory illustration 183  
11.3 Summary 190  
11.4 Exercises 190  

12 A Fully Polymorphic Factory: Level 6 193  
12.1 Conceptual features 193  
12.2 The polymorphic factory 197  
12.3 Using the Factory object 206  
12.4 Summary 208  
12.5 Exercises 209  

13 A Semi-Polymorphic Factory: Meta-Classes 211  
13.1 The structure of the application 211  
13.2 Meta-class objects 212  
13.3 The semi-polymorphic factory 216  
13.4 Summary 228  
13.5 Exercises 228  

**PART V PERFORMANCE ISSUES IN VBA**

14 Performance and Cost in VBA 233  
14.1 Arithmetic operations 236  
14.2 Procedure calls 242  
14.3 Data typing issues 244  
14.4 Summary 247  
14.5 Exercises 248  

15 Level and Performance 249  
15.1 Variations of the level 0 application 249  
15.2 Effect of level on times 254  
15.3 Summary 258  
15.4 Exercises 259  

16 Evolution and Data Structures 261  
16.1 Data structures in VBA 261  
16.2 Using VBA containers 264  
16.3 Numerical comparisons 271  
16.4 Summary 277  
16.5 Exercises 277
### PART VI VARIANCE REDUCTION IN THE MONTE CARLO METHOD
