Oil Shocks in New Keynesian Models: Positive and Normative Implications

A Dissertation
submitted to the Faculty of the
Graduate School of Arts and Sciences
of Georgetown University
in partial fulfillment of the requirements for the
degree of
Doctor of Philosophy
in Economics

by

Jian Chang, M.A.

Washington, DC
April 21, 2005

Thesis 8846
# Table of Contents

**Introduction**  
1

**Chapter 1: Optimal Monetary Policy and Oil Supply**  

- **Shocks – a New Keynesian Perspective**  
  4

  1 Introduction  
  4

  2 A Two-Sector Benchmark Economy  
  9

    2.1 The Yeoman-Farmer Model  
    10

    2.1.1 Consumption in the Two-Sector Economy  
    10

    2.1.2 Production in the Two-Sector Economy  
    12

    2.1.3 Monopolistically Competitive Environment  
    13

    2.1.4 The Household’s Maximization Problem  
    14

    2.2 The Demand Side and the Monetary Policy Instrument  
    16

    2.2.1 Price Indexes  
    16

    2.2.2 Monetary Policy Instrument  
    16

    2.3 The Flexible Price and Sticky Price Equilibria  
    17

    2.3.1 The Flexible Price Equilibrium  
    18

    2.3.2 The Sticky Price Equilibrium  
    19

    2.4 Optimal Monetary Stabilization Policy  
    21

    2.4.1 Output Stabilization and Welfare Maximization  
    21
2.4.2 Optimal Monetary Policy Rule ........................................ 23
2.4.3 Optimal Monetary Policy Response to Oil Shocks .............. 24
2.4.4 Price Stabilization ...................................................... 25
2.4.5 Inflation and Output Trade-off ...................................... 26

3 Extension of the Benchmark Model ......................................... 29
  3.1 Incorporating a Sticky Price Service Sector ......................... 30
  3.2 Optimal Monetary Policy ............................................... 32
    3.2.1 Welfare Maximization ............................................ 32
    3.2.2 Oil Shocks and Monetary Policy Trade-off ...................... 33
    3.2.3 Inflation and Output Stabilization under the Optimal Rule 34

4 Conclusions ........................................................................... 35

5 Appendix ................................................................................ 36

Bibliography ............................................................................... 37

Chapter 2: A Quantitative Assessment on the Relative
Prices in Open Economies – the Case of US and Canada 40

6 Introduction ............................................................................ 40

7 A Two-Country Three-Sector Model ....................................... 48
  7.1 Overview ........................................................................... 48
15 The Two-Country Three-Sector Model 108

15.1 Overview ........................................... 108
15.2 Definition of Key International Variables .................. 110

16 Pricing Decisions of Exporting Firms 112

16.1 PTM-LCP vs PCP in Theory .......................... 112
16.2 Comovement between the Real Exchange Rate and the Terms of Trade in Theory .................. 114
16.3 Real Exchange Rate Volatility in Theory .................. 115
16.4 Relative Price Movements in Model Variations ............ 117
  16.4.1 The Real Exchange Rate .......................... 117
  16.4.2 The Terms of Trade ............................ 118
  16.4.3 Comovement between the Relative Prices ........... 119
  16.4.4 Transmission of Shocks under Different Pricing Decisions ...... 120
    Monetary policy shock ............................. 120
    Productivity shock ................................ 121

17 Sectoral Labor Mobility 122

17.1 Sector Specific Labor vs Perfect Labor Mobility .......... 123
17.2 Oil Price Volatility ................................ 124
17.3 Relative Price Volatility ............................ 125
  17.3.1 The Terms of Trade ............................ 125
