Preface xvi

Acknowledgments xxi

Chapter 1

Introduction 1

- 1.1 Forward and Futures Contracts 5
- 1.2 Options 9
- 1.3 Swaps 10
- 1.4 Using Derivatives: Some Comments 11
- 1.5 The Structure of this Book 14
- 1.6 Exercises 15

PART ONE

Futures and Forwards 17

Chapter 2

Futures Markets 19

- 2.1 Introduction 19
- 2.2 The Changing Face of Futures Markets 19
- 2.3 The Functioning of Futures Exchanges 21
- 2.4 The Standardization of Futures Contracts 30
- 2.5 Closing Out Positions 34
- 2.6 Margin Requirements and Default Risk 36
- 2.7 Case Studies in Futures Markets 39
- 2.8 Exercises 53

Appendix 2A Futures Trading and US Regulation:
A Brief History 57

Chapter 3

Pricing Forwards and Futures I: The Basic Theory 60

- 3.1 Introduction 60
- 3.2 Pricing Forwards by Replication 61
- 3.3 Examples 63
- 3.4 Forward Pricing on Currencies and Related Assets 66
- 3.5 Forward-Rate Agreements 69
- 3.6 Concept Check 69
- 3.7 The Marked-to-Market Value of a Forward Contract 70

3.8 Futures Prices 72

3.9 Exercises 74

Appendix 3A Compounding Frequency 79

Appendix 3B Forward and Futures Prices with
Constant Interest Rates 81

Appendix 3C Rolling Over Futures Contracts 83

Chapter 4

Pricing Forwards and Futures II: Building on the Foundations 85

- 4.1 Introduction 85
- 4.2 From Theory to Reality 85
- 4.3 The Implied Repo Rate 89
- 4.4 Transactions Costs 92
- 4.5 Forward Prices and Future Spot Prices 92
- 4.6 Index Arbitrage 93
- 4.7 Exercises 97

Appendix 4A Forward Prices with Convenience
Yields 100

Chapter 5

Hedging with Futures and Forwards 101

- 5.1 Introduction 101
- 5.2 A Guide to the Main Results 103
- 5.3 The Cash Flow from a Hedged Position 104
- 5.4 The Case of No Basis Risk 105
- 5.5 The Minimum-Variance Hedge Ratio 106
- 5.6 Examples 109
- 5.7 Implementation 111
- 5.8 Further Issues in Implementation 112
- 5.9 Index Futures and Changing Equity Risk 114
- 5.10 Fixed-Income Futures and Duration-Based Hedging 115
- 5.11 Exercises 115

Appendix 5A Derivation of the Optimal Tailed
Hedge Ratio h^{**} 120

Chapter 6

Interest-Rate Forwards and Futures 122

- 6.1 Introduction 122
- 6.2 Eurodollars and Libor Rates 122
- 6.3 Forward-Rate Agreements 123
- 6.4 Eurodollar Futures 129

- 6.5 Treasury Bond Futures 136
- 6.6 Treasury Note Futures 139
- 6.7 Treasury Bill Futures 139
- 6.8 Duration-Based Hedging 140
- 6.9 Exercises 143
- Appendix 6A** Deriving the Arbitrage-Free
FRA Rate 147
- Appendix 6B** PVBP-Based Hedging Using
Eurodollar Futures 148
- Appendix 6C** Calculating the Conversion
Factor 149
- Appendix 6D** Duration as a Sensitivity
Measure 150
- Appendix 6E** The Duration of a Futures
Contract 151

PART TWO

Options 153

Chapter 7

Options Markets 155

- 7.1 Introduction 155
- 7.2 Definitions and Terminology 155
- 7.3 Options as Financial Insurance 156
- 7.4 Naked Option Positions 158
- 7.5 Options as Views on Market Direction
and Volatility 162
- 7.6 Exercises 165
- Appendix 7A** Options Markets 167

Chapter 8

Options: Payoffs and Trading Strategies 171

- 8.1 Introduction 171
- 8.2 Trading Strategies I: Covered Calls and
Protective Puts 171
- 8.3 Trading Strategies II: Spreads 174
- 8.4 Trading Strategies III: Combinations 182
- 8.5 Trading Strategies IV: Other Strategies 185
- 8.6 Which Strategies Are the Most Widely
Used? 189
- 8.7 The Barings Case 189
- 8.8 Exercises 192
- Appendix 8A** Asymmetric Butterfly
Spreads 195

Chapter 9

No-Arbitrage Restrictions on Option Prices 196

- 9.1 Introduction 196
- 9.2 Motivating Examples 196
- 9.3 Notation and Other Preliminaries 198
- 9.4 Maximum and Minimum Prices for
Options 199
- 9.5 The Insurance Value of an Option 204
- 9.6 Option Prices and Contract Parameters 205
- 9.7 Numerical Examples 208
- 9.8 Exercises 210

Chapter 10

Early Exercise and Put-Call Parity 213

- 10.1 Introduction 213
- 10.2 A Decomposition of Option Prices 213
- 10.3 The Optimality of Early Exercise 216
- 10.4 Put-Call Parity 220
- 10.5 Exercises 226

Chapter 11

Option Pricing: An Introduction 228

- 11.1 Overview 228
- 11.2 The Binomial Model 229
- 11.3 Pricing by Replication in a One-Period
Binomial Model 231
- 11.4 Comments 235
- 11.5 Riskless Hedge Portfolios 237
- 11.6 Pricing Using Risk-Neutral
Probabilities 238
- 11.7 The One-Period Model in General
Notation 242
- 11.8 The Delta of an Option 242
- 11.9 An Application: Portfolio Insurance 246
- 11.10 Exercises 248
- Appendix 11A** Riskless Hedge Portfolios
and Option Pricing 252
- Appendix 11B** Risk-Neutral Probabilities
and Arrow Security Prices 254
- Appendix 11C** The Risk-Neutral Probability,
No-Arbitrage, and Market
Completeness 255
- Appendix 11D** Equivalent Martingale
Measures 257

Chapter 12**Binomial Option Pricing 259**

- 12.1 Introduction 259
- 12.2 The Two-Period Binomial Tree 261
- 12.3 Pricing Two-Period European Options 262
- 12.4 European Option Pricing in General n -Period Trees 269
- 12.5 Pricing American Options: Preliminary Comments 269
- 12.6 American Puts on Non-Dividend-Paying Stocks 270
- 12.7 Cash Dividends in the Binomial Tree 272
- 12.8 An Alternative Approach to Cash Dividends 275
- 12.9 Dividend Yields in Binomial Trees 279
- 12.10 Exercises 282
- Appendix 12A** A General Representation of European Option Prices 286

Chapter 13**Implementing the Binomial Model 289**

- 13.1 Introduction 289
- 13.2 The Lognormal Distribution 289
- 13.3 Binomial Approximations of the Lognormal 294
- 13.4 Computer Implementation of the Binomial Model 298
- 13.5 Exercises 303
- Appendix 13A** Estimating Historical Volatility 306

Chapter 14**The Black-Scholes Model 308**

- 14.1 Introduction 308
- 14.2 Option Pricing in the Black-Scholes Setting 310
- 14.3 Remarks on the Formula 313
- 14.4 Working with the Formulae I: Plotting Option Prices 314
- 14.5 Working with the Formulae II: Algebraic Manipulation 315
- 14.6 Dividends in the Black-Scholes Model 319
- 14.7 Options on Indices, Currencies, and Futures 324
- 14.8 Testing the Black-Scholes Model: Implied Volatility 327
- 14.9 The VIX and Its Derivatives 332

- 14.10 Exercises 335

Appendix 14A Further Properties of the Black-Scholes Delta 338

Appendix 14B Variance and Volatility Swaps 339

Chapter 15**The Mathematics of Black-Scholes 344**

- 15.1 Introduction 344
- 15.2 Geometric Brownian Motion Defined 344
- 15.3 The Black-Scholes Formula via Replication 348
- 15.4 The Black-Scholes Formula via Risk-Neutral Pricing 351
- 15.5 The Black-Scholes Formula via CAPM 353
- 15.6 Exercises 354

Chapter 16**Options Modeling: Beyond Black-Scholes 357**

- 16.1 Introduction 357
- 16.2 Jump-Diffusion Models 358
- 16.3 Stochastic Volatility 368
- 16.4 GARCH Models 374
- 16.5 Other Approaches 378
- 16.6 Implied Binomial Trees/Local Volatility Models 379
- 16.7 Summary 389
- 16.8 Exercises 389

Appendix 16A Program Code for Jump-Diffusions 393

Appendix 16B Program Code for a Stochastic Volatility Model 394

Appendix 16C Heuristic Comments on Option Pricing under Stochastic Volatility 396

Appendix 16D Program Code for Simulating GARCH Stock Prices Distributions 399

Appendix 16E Local Volatility Models: The Fourth Period of the Example 400

Chapter 17**Sensitivity Analysis: The Option “Greeks” 404**

- 17.1 Introduction 404
- 17.2 Interpreting the Greeks: A Snapshot View 404

- 17.3 The Option Delta 408
- 17.4 The Option Gamma 412
- 17.5 The Option Theta 418
- 17.6 The Option Vega 423
- 17.7 The Option Rho 426
- 17.8 Portfolio Greeks 429
- 17.9 Exercises 432
- Appendix 17A** Deriving the Black-Scholes
Option Greeks 436

Chapter 18

Exotic Options I: Path-Independent Options 440

- 18.1 Introduction 440
- 18.2 Forward Start Options 442
- 18.3 Binary Options 445
- 18.4 Chooser Options 450
- 18.5 Compound Options 453
- 18.6 Exchange Options 458
- 18.7 Quanto Options 460
- 18.8 Variants on the Exchange
Option Theme 462
- 18.9 Exercises 465

Chapter 19

Exotic Options II: Path-Dependent Options 470

- 19.1 Path-Dependent Exotic
Options 470
- 19.2 Barrier Options 470
- 19.3 Asian Options 479
- 19.4 Lookback Options 485
- 19.5 Cliquets 488
- 19.6 Shout Options 490
- 19.7 Exercises 492

- Appendix 19A** Barrier Option Pricing
Formulae 496

Chapter 20

Value-at-Risk 498

- 20.1 Introduction 498
- 20.2 Value-at-Risk 498
- 20.3 Risk Decomposition 505
- 20.4 Coherent Risk Measures 511
- 20.5 Exercises 515

Chapter 21

Convertible Bonds 519

- 21.1 Introduction 519
- 21.2 Convertible Bond Terminology 519
- 21.3 Main Features of Convertible Bonds 520
- 21.4 Breakeven Analysis 522
- 21.5 Pricing Convertibles: A First Pass 523
- 21.6 Incorporating Credit Risk 530
- 21.7 Convertible Greeks 534
- 21.8 Convertible Arbitrage 542
- 21.9 Summary 542
- 21.10 Exercises 543

- Appendix 21A** Octave Code for the Blended
Discount Rate Valuation Tree 545

- Appendix 21B** Octave Code for the Simplified
Das-Sundaram Model 546

Chapter 22

Real Options 548

- 22.1 Introduction 548
- 22.2 Preliminary Analysis and Examples 550
- 22.3 A Real Options “Case Study” 554
- 22.4 Creating the State Space 560
- 22.5 Applications of Real Options 563
- 22.6 Summary 564
- 22.7 Exercises 564

- Appendix 22A** Derivation of Cash-Flow Value
in the “Waiting-to-Invest”
Example 568

PART THREE

Swaps 569

Chapter 23

Interest Rate Swaps and Floating-Rate Products 571

- 23.1 Introduction 571
- 23.2 Floating-Rate Notes 571
- 23.3 Interest Rate Swaps 575
- 23.4 Uses of Swaps 576
- 23.5 Swap Payoffs 579
- 23.6 Valuing and Pricing Swaps 582
- 23.7 Extending the Pricing Arguments 586
- 23.8 Case Study: The Procter & Gamble–Bankers
Trust “5/30” Swap 589

- 23.9** Case Study: A Long-Term Capital Management “Convergence Trade” 593
- 23.10** Credit Risk and Credit Exposure 596
- 23.11** Hedging Swaps 597
- 23.12** Caps, Floors, and Swaptions 599
- 23.13** The Black Model for Pricing Caps, Floors, and Swaptions 604
- 23.14** Summary 609
- 23.15** Exercises 609

Chapter 24

Equity Swaps 613

- 24.1** Introduction 613
- 24.2** Uses of Equity Swaps 614
- 24.3** Payoffs from Equity Swaps 616
- 24.4** Valuation and Pricing of Equity Swaps 622
- 24.5** Summary 628
- 24.6** Exercises 628

Chapter 25

Currency and Commodity Swaps 631

- 25.1** Introduction 631
- 25.2** Currency Swaps 631
- 25.3** Commodity Swaps 639
- 25.4** Summary 643
- 25.5** Exercises 644

PART FOUR

Interest Rate Modeling 647

Chapter 26

The Term Structure of Interest Rates: Concepts 649

- 26.1** Introduction 649
- 26.2** The Yield-to-Maturity 649
- 26.3** The Term Structure of Interest Rates 651
- 26.4** Discount Functions 652
- 26.5** Zero-Coupon Rates 653
- 26.6** Forward Rates 654
- 26.7** Yield-to-Maturity, Zero-Coupon Rates, and Forward Rates 656
- 26.8** Constructing the Yield-to-Maturity Curve: An Empirical Illustration 657
- 26.9** Summary 661
- 26.10** Exercises 662
- Appendix 26A** The Raw YTM Data 664

Chapter 27

Estimating the Yield Curve 667

- 27.1** Introduction 667
- 27.2** Bootstrapping 667
- 27.3** Splines 669
- 27.4** Polynomial Splines 670
- 27.5** Exponential Splines 673
- 27.6** Implementation Issues with Splines 674
- 27.7** The Nelson-Siegel-Svensson Approach 674
- 27.8** Summary 676
- 27.9** Exercises 676

Appendix 27A Bootstrapping by Matrix Inversion 680

Appendix 27B Implementation with Exponential Splines 681

Chapter 28

Modeling Term-Structure Movements 684

- 28.1** Introduction 684
- 28.2** Interest-Rate Modeling versus Equity Modeling 684
- 28.3** Arbitrage Violations: A Simple Example 685
- 28.4** A Gentle Introduction to No-Arbitrage Modeling 687
- 28.5** “No-Arbitrage” and “Equilibrium” Models 693
- 28.6** Summary 697
- 28.7** Exercises 697

Chapter 29

Factor Models of the Term Structure 700

- 29.1** Overview 700
- 29.2** The Black-Derman-Toy Model 701
- 29.3** The Ho-Lee Model 710
- 29.4** One-Factor Models in Continuous Time 714
- 29.5** Multifactor Models 720
- 29.6** Affine Factor Models 722
- 29.7** Summary 725
- 29.8** Exercises 726

Appendix 29A Deriving the Fundamental PDE in Factor Models 729

Chapter 30

The Heath-Jarrow-Morton and Libor Market Models 731

- 30.1** Overview 731

30.2	The HJM Framework: Preliminary Comments	731
30.3	A One-Factor HJM Model	733
30.4	A Two-Factor HJM Setting	742
30.5	The HJM Risk-Neutral Drifts: An Algebraic Derivation	746
30.6	Libor Market Models	749
30.7	Mathematical Excursion: Martingales	750
30.8	Libor Rates: Notation	751
30.9	Risk-Neutral Pricing in the LMM	753
30.10	Simulation of the Market Model	757
30.11	Calibration	757
30.12	Swap Market Models	758
30.13	Swaptions	760
30.14	Summary	761
30.15	Exercises	761
Appendix 30A	Risk-Neutral Drifts and Volatilities in HJM	765

PART FIVE

Credit Risk 769

Chapter 31

Credit Derivative Products 771

31.1	Introduction	771
31.2	Total Return Swaps	775
31.3	Credit Spread Options/Forwards	779
31.4	Credit Default Swaps	779
31.5	Credit-Linked Notes	788
31.6	Correlation Products	790
31.7	Summary	797
31.8	Exercises	797

Appendix 31A The CDS Big Bang 800

Chapter 32

Structural Models of Default Risk 802

32.1	Introduction	802
32.2	The Merton (1974) Model	803
32.3	Issues in Implementation	812
32.4	A Practitioner Model	817
32.5	Extensions of the Merton Model	819
32.6	Evaluation of the Structural Model Approach	820
32.7	Summary	823
32.8	Exercises	824

Appendix 32A The Delianedis-Geske Model 826

Chapter 33

Reduced-Form Models of Default Risk 829

33.1	Introduction	829
33.2	Modeling Default I: Intensity Processes	830
33.3	Modeling Default II: Recovery Rate Conventions	834
33.4	The Litterman-Iben Model	836
33.5	The Duffie-Singleton Result	841
33.6	Defaultable HJM Models	843
33.7	Ratings-Based Modeling: The JLT Model	845
33.8	An Application of Reduced-Form Models: Pricing CDS	853
33.9	Summary	855
33.10	Exercises	855
Appendix 33A	Duffie-Singleton in Discrete Time	859
Appendix 33B	Derivation of the Drift-Volatility Relationship	860

Chapter 34

Modeling Correlated Default 863

34.1	Introduction	863
34.2	Examples of Correlated Default Products	863
34.3	Simple Correlated Default Math	865
34.4	Structural Models Based on Asset Values	868
34.5	Reduced-Form Models	874
34.6	Multiperiod Correlated Default	875
34.7	Fast Computation of Credit Portfolio Loss Distributions without Simulation	878
34.8	Copula Functions	881
34.9	Top-Down Modeling of Credit Portfolio Loss	893
34.10	Summary	897
34.11	Exercises	898

Bibliography B-1

Index I-1

The following Web chapters are available at www.mhhe.com/sd1e:

PART SIX

Computation 901

Chapter 35

Derivative Pricing with Finite Differencing 903

- 35.1 Introduction 903
- 35.2 Solving Differential Equations 904
- 35.3 A First Approach to Pricing Equity Options 907
- 35.4 Implicit Finite Differencing 913
- 35.5 The Crank-Nicholson Scheme 917
- 35.6 Finite Differencing for Term-Structure Models 919
- 35.7 Summary 921
- 35.8 Exercises 922

Chapter 36

Derivative Pricing with Monte Carlo Simulation 923

- 36.1 Introduction 923
- 36.2 Simulating Normal Random Variables 924
- 36.3 Bivariate Random Variables 925
- 36.4 Cholesky Decomposition 925
- 36.5 Stochastic Processes for Equity Prices 927
- 36.6 ARCH Models 929
- 36.7 Interest-Rate Processes 930
- 36.8 Estimating Historical Volatility for Equities 932
- 36.9 Estimating Historical Volatility for Interest Rates 932
- 36.10 Path-Dependent Options 933
- 36.11 Variance Reduction 935
- 36.12 Monte Carlo for American Options 938
- 36.13 Summary 942
- 36.14 Exercises 943

Chapter 37

Using Octave 945

- 37.1 Some Simple Commands 945
- 37.2 Regression and Integration 948
- 37.3 Reading in Data, Sorting, and Finding 950
- 37.4 Equation Solving 955
- 37.5 Screenshots 955
