LEARNING IN MACROECONOMIC MODELS

FABIO MILANI

A DISSERTATION
PRESENTED TO THE FACULTY
OF PRINCETON UNIVERSITY
IN CANDIDACY FOR THE DEGREE
OF DOCTOR OF PHILOSOPHY

RECOMMENDED FOR ACCEPTANCE
BY THE DEPARTMENT OF
ECONOMICS

JUNE 2006
# Contents

Abstract ......................................................... iii  

Acknowledgements ........................................... v  

Introduction ................................................... 1  

1 Adaptive Learning and Inflation Persistence ....... 5  

1.1 Introduction ............................................... 5  

1.2 The Model .................................................. 10  

1.2.1 The Household Problem ............................... 11  

1.2.2 Optimal Price Setting ................................. 12  

1.3 The New Keynesian Phillips Curve with Learning .... 15  

1.3.1 Expectations Formation: Adaptive Learning ......... 16  

1.3.2 Real Marginal Cost as the Driving Variable ......... 20  

1.4 Some Simple Irrational Expectations Econometrics: Empirical Results .... 20  

1.4.1 What Creates Persistence in Inflation? ............... 22  

1.5 Learning Speed and Inflation Persistence ............. 27  

1.6 Learning Speed and Fit .................................... 28  

1.7 Robustness .................................................. 32  

1.7.1 Phillips Curve as Learning Rule ....................... 33  

1.7.2 Interest Rates in the Learning Rule ................... 37  

1.8 Policy Implications ....................................... 38
2.7 Welfare and Policy Implications ............................................. 94
  2.7.1 Rational Expectations and Mechanical Sources of Persistence . 95
  2.7.2 Learning ................................................................. 96
2.8 Conclusions and Future Directions ......................................... 100

3 Learning, Monetary Policy Rules, and Macroeconomic Stability 103
  3.1 Introduction ............................................................... 103
  3.2 The Model ................................................................. 108
    3.2.1 Expectations Formation and Constant-Gain Learning .......... 111
    3.2.2 Equilibrium .......................................................... 113
    3.2.3 Pre-Volcker Monetary Policy and the Taylor Principle ...... 114
  3.3 Econometric Approach .................................................... 116
    3.3.1 Specifying the Prior Distribution ................................. 117
    3.3.2 Metropolis-Hastings Algorithm ................................... 119
    3.3.3 Convergence .......................................................... 119
  3.4 Estimating the Model with Learning: Empirical Results ............ 120
    3.4.1 Has Monetary Policy Changed? ...................................... 120
    3.4.2 Time-Varying Shocks and Time-Varying Policy .................. 123
    3.4.3 Has Learning Speed Changed over Time? ............................ 125
  3.5 Robustness ............................................................... 126
    3.5.1 Forecasts $k$ Periods Ahead ................................. 126
    3.5.2 Interest-Rate Smoothing ........................................... 128
    3.5.3 VAR(1) as Learning Rule ........................................... 129
    3.5.4 Joint Estimation of Initial Beliefs .............................. 131
    3.5.5 Recursive Least Squares (RLS) Learning ......................... 132
  3.6 Model Comparison ........................................................ 134
  3.7 Conclusions and Future Directions ...................................... 136
