ESSAYS ON ASYMMETRIC INFORMATION

A Thesis Submitted to the Faculty of the Graduate School of
the University of Minnesota
by

SHINO TAKAYAMA

In Partial Fulfillment of the Requirements for the Degree of
Doctor of Philosophy

Professor ERZO LUTTMER
Adviser

Professor JAN WERNER
Adviser

MARCH 2006
Table of Contents

1 Introduction
   1.1 Asymmetric Information in Interest Group Politics .............. 4
   1.2 Asymmetric Information in Financial Markets .................... 6
   1.3 Contributions of the Dissertation ............................. 12
   1.4 Overview of the Dissertation .................................. 15

2 Analysis of Campaign Finance with Split Contribution .............. 17
   2.1 Introduction .................................................. 17
   2.2 The Model ..................................................... 23
   2.3 Truthful Political Equilibrium ................................. 27
   2.4 A Voting Equilibrium and Welfare Analysis ....................... 33
   2.5 Concluding Remarks .......................................... 42
   2.6 Appendix: Proofs .............................................. 42

3 A Dynamic Analysis of Bid-Ask Spreads with Multiple Trade Sizes 52
   3.1 Introduction .................................................. 52
   3.2 The Model of the Sequential Trades .............................. 59
### TABLE OF CONTENTS

3.3 Equilibrium Analysis .......................... 67
   3.3.1 Optimal Trading Strategies of the Informed Traders .... 67
   3.3.2 Existence and Uniqueness of Equilibrium .......... 73
   3.3.3 Equilibrium Dynamics .......................... 74
   3.3.4 Bid-Ask Spreads and The Market Maker's Learning Process ... 79
   3.3.5 The Number of Trade Sizes and Its Impact on Equilibrium .. 87

3.4 The Price-Impact Function .......................... 90
3.5 Concluding Remarks ................................ 93
3.6 Appendix I: Proofs of Lemmas ........................ 96
3.7 Appendix II: Proofs of Theorems, Propositions & Corollaries .... 100

4 Continuous Auctions and Return Process ............. 126
   4.1 Introduction ...................................... 126
   4.2 The Description of the Back & Baruch '04 Model ........ 128
   4.3 Numerical Simulation of the Model .................... 132
   4.4 Concluding Remarks ................................ 135
   4.5 Appendix: Proofs .................................. 137
