# Part 1 MICROFOUNDATIONS OF MACROECONOMICS

## Chapter 1 Overview of the book

1.1 Introduction
   1.1.1 Learning objective
   1.1.2 Who made it happen?

1.2 The microfoundations approach
   1.2.1 Building macro from micro: new elements
   1.2.2 Microeconomic foundations of macroeconomics

1.3 Static versus dynamic general equilibrium
   1.3.1 Dynamic AS–AD
   1.3.2 General equilibrium output and input dimensions
   1.3.3 Consumption smoothing
   1.3.4 Taxes, regulations and inefficiencies

1.4 Comparative statics and business cycles
   1.4.1 A focus on productivity changes
   1.4.2 Basic puzzle of too much smoothing
   1.4.3 Human capital
   1.4.4 Banking in general equilibrium
   1.4.5 Private and public finance

1.5 Explaining business cycles and growth

1.6 Content by margins

1.7 Consumption, permanent income and wealth

1.8 A methodological outline
   1.8.1 Closed economy methodology
   1.8.2 Open economy methodology

1.9 Suggested ways to use the text
   1.9.1 Possible course usage of text
   1.9.2 A summary

1.10 Questions

1.11 References

## Part 2 LABOUR AND GOODS MARKETS

### Chapter 2 Labour, leisure and productivity

2.1 Introduction
   2.1.1 Building on the last chapter
   2.1.2 Learning objective
   2.1.3 Who made it happen?

2.2 Representative agent goods–leisure choice
   2.2.1 Utility and production elements
   2.2.2 Time and goods constraints
   2.2.3 Equilibrium with capital fixed
   2.2.4 Example 2.1: Baseline model
   2.2.5 Smoothing consumption

2.3 Goods productivity increase
   2.3.1 Example 2.2
   2.3.2 Substitution and income effects
   2.3.3 Example 2.3: An eight-hour day
   2.3.4 Example 2.4: Linear indifference curves

2.4 Consumer and firm problems
   2.4.1 Consumer: demand for goods, supply of labour
   2.4.2 Firm: supply of goods, demand for labour

2.5 Aggregate demand and supply
   2.5.1 Example 2.5
   2.5.2 The goods markets: AS and AD
   2.5.3 Aggregate labour market
   2.5.4 Market equilibrium: the real wage rate
   2.5.5 General equilibrium representation

2.6 Labour productivity increase
   2.6.1 Example 2.6
   2.6.2 General equilibrium

2.7 Application: productivity and growth
   2.7.1 Growth policy
   2.7.2 US legislation
   2.7.3 Modern economic views on stabilisation vs growth
Chapter 10 Dynamic AS–AD solution methodology

10.1 Introduction
10.1.1 Building on the last chapters
10.1.2 Learning objective
10.1.3 Who made it happen?

10.2 Full model solution
10.2.1 Capital stock state variable
10.2.2 AS–AD solution approach
10.2.3 Alternative solution approach
10.2.4 All other variables

10.3 Baseline calibration of the solution
10.3.1 Target values
10.3.2 Baseline Examples 8.1 and 9.1
10.3.3 Consistency of the solution
10.3.4 Calibration of the full solution

10.4 Comparative statics of AS–AD analysis
10.4.1 Productivity change: Examples 8.2 and 9.2
10.4.2 Time endowment change: Examples 8.3 and 9.3

10.5 Business cycle explanation
10.5.1 Example 9.4
10.5.2 Example 9.5

10.6 Other comparative statics and $k$
10.6.1 Depreciation rate change
10.6.2 Leisure preference change
10.6.3 Time preference change
10.6.4 Labour share change
Part 5
GROWTH, HUMAN CAPITAL AND BUSINESS CYCLES

Chapter 11 Exogenous growth  297
11.1 Introduction  297
11.1.1 Building on the last chapters  297
11.1.2 Learning objective  298
11.1.3 Who made it happen?  298
11.2 Causes of sustained growth  299
11.2.1 Principle of sustained growth  299
11.3 Exogenous technological progress  299
11.3.1 Stylised facts  300
11.3.2 Growth accounting  301
11.4 Balanced growth path equilibrium  302
11.4.1 Consumer demand with growth  302
11.4.2 Consumption in terms of permanent income  303
11.4.3 Aggregate demand with growth  303
11.4.4 Aggregate supply with growth  304
11.5 AS–AD analysis  304
11.5.1 Example 11.1: Calibration  304
11.5.2 Example 11.2: Alternative baseline calibration  305
11.5.3 Consumption and output  308
11.5.4 Labour market  308
11.6 The exogenous growth process  309
11.6.1 Example 11.3: Continuous shifts in $A_G$  310
11.6.2 Labour market  310
11.6.3 General equilibrium  313
11.7 Trend in time endowment  316
11.7.1 Example 11.4: Opposite trends in $T$ and $A_G$  316
11.7.2 Labour market  318
11.8 Applications  319
11.8.1 TFP, Japan's lost decade and the Minnesota School  319
11.9 Questions  320
11.10 References  320
11.11 Appendix A11: Solution methodology for exogenous growth  321

Chapter 12 Human capital and endogenous growth  326
12.1 Introduction  326
12.1.1 Building on the last chapter  327
12.1.2 Learning objectives  327
12.1.3 Who made it happen?  327
12.2 Human capital investment  328
12.2.1 Relation to exogenous growth  328
12.2.2 Second sector and endogenous growth  329
12.3 Growth with human and physical capital  330
12.3.1 Second intertemporal capital margin  331
12.4 AS–AD with human capital  332
12.4.1 Permanent income and wealth  333
12.4.2 Aggregate demand $AD$  334
12.4.3 Aggregate supply $AS$  334
12.4.4 Example 12.1: Baseline calibration  335
12.4.5 Equilibrium wage rate  335
12.4.6 Consumption and output  336
12.4.7 General equilibrium  337
12.5 Labour market  339
12.6 Endogenous growth process  342
12.6.1 Example 12.2: BGP growth  343
12.6.2 Labour market  345
12.7 Labour intensity increase  346
12.7.1 Example 12.3  346
12.7.2 Interpretation  347
12.8 Special cases of endogenous growth  347
12.8.1 Example 12.4: Human capital only  348
12.8.2 Example 12.5: Physical capital only  349
12.9 Applications: income distribution, Marx and human capital  350
12.10 Questions  351
12.11 References  352
12.12 Appendix A12: Solution methodology  352
12.12.1 Solving for $g$ with AS–AD  353
12.12.2 Quadratic equation solution of growth rate  356
Chapter 13 Explaining cycles and trends

13.1 Introduction
   13.1.1 Building on the last chapters
   13.1.2 Learning objective
   13.1.3 Who made it happen?

13.2 Business cycles with endogenous growth

13.3 Goods sector productivity increase
   13.3.1 Example 13.1
   13.3.2 Equilibrium wage
   13.3.3 Consumption and output
   13.3.4 Labour market
   13.3.5 General equilibrium

13.4 Human capital sector productivity increase
   13.4.1 Example 13.2
   13.4.2 Equilibrium wage
   13.4.3 Consumption and output
   13.4.4 Labour market
   13.4.5 General equilibrium

13.5 Economic expansion and contraction
   13.5.1 Consumption-output puzzle
   13.5.2 Two-sector business cycle models
   13.5.3 Cyclical change in growth rate

13.6 Shocks within a business cycle model
   13.6.1 Example 13.3: Zero persistence
   13.6.2 Example 13.4: Full persistence
   13.6.3 Example 13.5: High degree of shock persistence

13.7 Growth accounting

13.8 Historical trends with endogenous growth
   13.8.1 Time allocation trends
   13.8.2 Economic development
   13.8.3 Industrial transformation
   13.8.4 Policy

13.9 Application: capital symmetry in growth theory

13.10 Questions

13.11 References

Chapter 14 International trade

14.1 Introduction
   14.1.1 Building on the last chapters
   14.1.2 Learning objective
   14.1.3 Who made it happen?

14.2 Autarky
   14.2.1 Example 14.1: Autarky
   14.2.2 Labour market

14.3 Trade

14.4 Trade flows

14.5 Labour market
   14.5.1 Trade

14.6 Factor price equalisation
   14.6.1 Interest rate
   14.6.2 Wage rate
   14.6.3 Capital to effective labour ratios

14.7 General equilibrium
   14.7.1 Autarky
   14.7.2 Trade
   14.7.3 Savings and investment

14.8 Changes in productivities
   14.8.1 Change in human capital investment productivity
   14.8.2 Exogenous growth
   14.8.3 Example 14.3: Numerous agents

14.9 Applications
   14.9.1 Growth convergence
   14.9.2 Leontief paradox
   14.9.3 Savings-investment and Feldstein-Horioka puzzle

14.10 Questions

14.11 References

Part 6
RISK, BANKING AND ASSETS

Chapter 15 Incomplete markets and banking

15.1 Introduction
   15.1.1 Building on the last chapters
   15.1.2 Learning objective
   15.1.3 Who made it happen?

15.2 Two-state analysis in general equilibrium
   15.2.1 Costly transfer of income across states
   15.2.2 Complete consumption smoothing
   15.2.3 Log-utility and linear production
   15.2.4 Example 15.1: Baseline
   15.2.5 Example 15.2: Consumption tilting

15.3 Consumer and firm
decentralised problems
   15.3.1 Consumer problem
   15.3.2 Firm problem

15.4 Application: capital symmetry in growth theory

15.5 Application: capital symmetry in growth theory

15.6 Application: capital symmetry in growth theory

15.7 Application: capital symmetry in growth theory

15.8 Application: capital symmetry in growth theory

15.9 Application: capital symmetry in growth theory

15.10 Questions

15.11 References
## Contents

15.3.3 Market clearing equilibrium 442
15.4 The financial intermediation approach 442
15.5 Banking across states of nature 443
15.5.1 Consumer problem 444
15.5.2 Bank problem 444
15.5.3 Market clearing 445
15.5.4 Example 15.4: Equal probabilities of states 446
15.5.5 Example 15.5: Good state more probable 446
15.5.6 Example 15.6: Rare bad state 447
15.6 Bank production factors 450
15.6.1 Example 15.7: Productivity factor 450
15.6.2 Example 15.8: Larger labour costs 452
15.6.3 Example 15.9: High labour cost 452
15.7 Aggregate risk: falling bank productivity in the bad state 454
15.8 Application 455
15.8.1 Unemployment and health insurance 455
15.9 Questions 456
15.10 References 457

### Chapter 16 Investment and banking productivity 458

16.1 Introduction 458
16.1.1 Building on the last chapters 458
16.1.2 Learning objective 459
16.1.3 Who made it happen? 459
16.2 Savings-investment intermediation 459
16.2.1 Consumer problem 459
16.2.2 Goods producer problem 461
16.2.3 Bank technology for producing loans 461
16.2.4 Bank profit optimisation problem 462
16.2.5 Solution with deposits equal loans 464
16.2.6 Example 16.1: Marginal cost and bank supply 465
16.2.7 AS–AD with banking 466
16.3 Example 16.2: Baseline calibration with banking 467
16.3.1 Bank productivity and bank crises 468
16.3.2 Example 16.3: The bank crisis 2007–09 469
16.3.3 Interest rate spread 469
16.3.4 Labour market and bank crisis 470
16.4 General equilibrium comparison 473
16.5 Crashes of 1929 and 2008 476
16.6 Application: bank insurance policy 477
16.6.1 Deposit insurance with risk-based premiums 477

16.6.2 Policy for global bank failure, aggregate risk and moral hazard 478
16.6.3 International finance systemic insurance 478

16.7 Questions 479
16.8 References 480
16.9 Appendix A16 480
16.9.1 Example 16.2 481
16.9.2 Example 16.3 483

### Chapter 17 Asset prices and finance 484

17.1 Introduction 484
17.1.1 Building on the last chapters 484
17.1.2 Learning objective 485
17.1.3 Who made it happen? 485
17.2 Modelling the return on bonds 485
17.2.1 Extended baseline dynamic model 486
17.2.2 Equilibrium condition for bonds 487
17.2.3 Example 17.1: Alternative bond pricing 488

17.3 Equity capital asset market 488
17.3.1 The equity premium 488
17.3.2 A model of asset prices under certainty 489
17.3.3 Value of goods producer 491
17.3.4 Limiting discounted price: transversality 492
17.3.5 Example 17.2: Stock price and capital 492

17.4 Under uncertainty 493
17.4.1 Example 17.3: Asset pricing 494
17.4.2 Example 17.4: Expectations hypothesis 495
17.4.3 Prices and dividend streams 495
17.4.4 Example 17.5: Constant dividend stream 496

17.5 Asset prices and growth 497
17.5.1 Example 17.6: Exogenous growth 497
17.5.2 Endogenous growth 497

17.6 Deriving the equity premium 499
17.6.1 Example 17.7: Empirical failing of exogenous growth 500
17.6.2 Equity premium and human capital 501

17.7 Application: historical price–earnings ratios 503
17.8 Questions 504
17.9 References 505
Chapter 18 Public finance 509
18.1 Introduction 509
  18.1.1 Building on the last chapters 509
  18.1.2 Learning objective 510
  18.1.3 Who made it happen? 510
18.2 Government budget and wealth constraints 510
  18.2.1 Initial period revenue and spending 511
  18.2.2 Subsequent periods 511
  18.2.3 Wealth constraint 511
  18.2.4 Bond transversality and the wealth constraint 512
  18.2.5 Ricardian equivalence 513
  18.2.6 Impossibility theorem of non-Ricardian equivalence 514
18.3 BGP equilibrium government spending 514
  18.3.1 Tax component 515
  18.3.2 Government spending component 516
  18.3.3 Money printing component 516
  18.3.4 Wealth constraint with balanced growth 518
  18.3.5 With inflation 518
  18.3.6 Example 18.1: Seigniorage wealth 520
18.4 Government debt from deficits 520
  18.4.1 Debt and deficit to GDP ratios 520
  18.4.2 Example 18.2: Maastricht Treaty debt and deficit limits 521
18.5 Optimal public finance 521
  18.5.1 Spending as a constant share of output 522
  18.5.2 Endogenous growth and a constant share 522
  18.5.3 Example 18.3: Optimal taxes, debt and deficit 523
18.6 Applications 524
  18.6.1 Greek debt crisis and Ricardian equivalence 524
  18.6.2 Taxes and government size 525
  18.6.3 Flat tax policy around the world 525
18.7 Questions 526
18.8 References 527

Chapter 19 Taxes and growth 528
19.1 Introduction 528
  19.1.1 Building on the last chapters 528
  19.1.2 Learning objective 529
  19.1.3 Who made it happen? 529
19.2 Capital income tax 529
  19.2.1 AS–AD analysis 531
  19.2.2 Solution methodology 532
  19.2.3 Example 19.1: Baseline calibration 534
  19.2.4 Labour market 537
  19.2.5 General equilibrium 539
19.3 Labour income tax 541
  19.3.1 AS–AD analysis 542
  19.3.2 Solution methodology 543
  19.3.3 Example 19.2 545
  19.3.4 Labour market 548
  19.3.5 General equilibrium 550
19.4 Consumption VAT 552
  19.4.1 Example 19.3 554
19.5 Applications 554
  19.5.1 Value added taxes 554
  19.5.2 Application: trickle down economics 554
  19.5.3 Capital, market interest rates and equity value 555
19.6 Questions 556
19.7 References 558

Chapter 20 Monetary theory and policy 559
20.1 Introduction 559
  20.1.1 Building on the last chapters 560
  20.1.2 Learning objective 560
  20.1.3 Who made it happen? 560
20.2 The Fisher equation: linking nominal and real 560
  20.2.1 The separation of real from nominal factors 561
  20.2.2 The nominal interest rate and the Fisher equation 561
  20.2.3 Unexpected inflation and the Phillips curve 563
  20.2.4 Interpreting the Phillips curve relation 564
20.3 Money supply, inflation and government expenditure 564
  20.3.1 Money supply growth and government spending 565
  20.3.2 Money supply and the inflation rate 566
  20.3.3 Zero growth inflation rate determination 566
  20.3.4 Example 20.1: Financing high spending when growth is zero 566
  20.3.5 Example 20.2: Financing low spending when growth is zero 567
  20.3.6 The inflation tax 567
  20.3.7 Inflation and growth 567
