# CONTENTS

Introduction 1

## PART ONE  • Risk management: what must be changed

1 Lessons From Recent Financial Crises 7  
  1.1 The Basic Goals of Risk Management 7  
  1.2 When Risk Management Fails 7  
  1.3 What Should Be Done? 8  

2 Living in Turbulent Times 11  
  2.1 New and Larger Risks 11  
  2.2 Increased Management Accountability 13  
  2.3 Need for a Global Approach 14  

3 The Need for a Proper Methodology 16  
  3.1 The Necessary Ingredients 16  
  3.2 Risk Mapping 17  
  3.3 Loss Control 22  
  3.4 Risk Allocation 23  

## PART TWO  • What is behind risk modeling

4 The Basic Tools of Risk Modeling 29  
  4.1 Assessing Probabilities: The Frequentist and Subjective Approaches 29  
  4.2 Bayesian Updating 30  
  4.3 Estimating Loss Distributions 32  
  4.4 Combining Event Trees and Monte Carlo Methods 37  
  4.5 The Dangers of the Stationarity Assumption 39  

5 Statistical Risk Measures 41  
  5.1 The Expectation or Mean 41  
  5.2 The Variance 45  
  5.3 Linear Correlation 49  
  5.4 Copulas 52  
  5.5 The Value at Risk 55  
  5.6 Mutualization and Diversification 60  
  5.7 The Dangers of Using Simple Risk Measures 67  

Appendix: Extreme Value Theory 75  

vii
6 Leverage and Ruin Theory 78
  6.1 Leverage and Return on Equity 78
  6.2 Economic Capital for a Bank 80
  6.3 Economic Capital for an Insurance Company 81
  6.4 The Limits of Ruin Theory 85

PART THREE  The perfect markets hypothesis and its dangers

7 Risk Neutral Valuation 91
  7.1 The Expected Present Value Criterion 91
  7.2 The Magic of Perfect Markets 92
  7.3 Complete Markets and Absence of Arbitrage Opportunities 94
  7.4 A Binomial Example 96
  7.5 The Mirages of the Perfect Markets World 98

8 The Case of Incomplete Markets 104
  8.1 Solving the St. Petersburg Paradox 104
  8.2 Certainty Equivalent 106
  8.3 Markets for Exchanging Risks 108
  8.4 The Limits of the Equilibrium Approach 114

9 Risk Management in a Normal World 118
  9.1 The Mean–Variance Criterion 118
  9.2 Portfolio Choice 119
  9.3 The Diversification Principle 121
  9.4 Efficient Portfolios and the Sharpe Ratio 122
  9.5 The Capital Asset Pricing Model (CAPM) 124
  9.6 Futures Contracts and Hedging 125
  9.7 Capital Allocation and RAROC 128
  9.8 The Dangers of Viewing the World as “Normal” 130
Appendix 1: Portfolio Choice with Several Risky Assets 136
Appendix 2: Deriving the CAPM Formula 137

PART FOUR  Risk management and shareholder value

10 Why Market Imperfections Matter for Shareholder Value 143
  10.1 Standards Methods for Assessing Shareholder Value 143
  10.2 Why the Shareholder Value Function Is Likely to Be Non-Linear: A Simple Example 146
  10.3 Incentive Problems Generate Financial Frictions 147

11 The Shareholder Value Function 150
  11.1 A Target Level of Cash 150
  11.2 A Model for Optimizing Liquidity Management 151
  11.3 Liquidity and Shareholder Value 153
Appendix 1: Stochastic Differential Calculus 154
Appendix 2: Derivation of the Shareholder Value Function 156
