Preface xiii

To the Student xv

To the Teacher: How to Build a Course Around This Book xvii

CHAPTER 1 How Are We Doing? Data-Driven Views of Business Performance 1
1.1 Setting Out Business Data 2
1.2 Different Kinds of Variables 5
1.3 The Idea of a Distribution 8
1.4 Typical Performance: The Sample Mean 13
1.5 Uncertainty in Performance: SD 15
1.6 Changing Units 18
1.7 Shapes of Distributions 20

2.1 Different Layouts of Business Data 27
2.2 Comparing Performance across Different Segments 29
2.3 Complex Comparisons: Using Pivotables 30
2.4 Unusually High or Low Outcomes: z-Scores 35
2.5 Homogeneous Peer Groups 39
2.6 Combining Different Performance Measures 41

CHAPTER 3 Dealing with Uncertainty and Chance 51
3.1 Framing What Could Happen: Outcomes and Events 52
3.2 How Likely Is It? Probability Basics 55
3.3 Market Segments and Behavior; Probability Tables 57
3.4 Example in Health Care: Testing for a Disease 59
3.5 Conditional Probability 61
3.6 How Strong Is the Relationship? Measuring Dependence 66
3.7 Probability Trees 71
9.3 Law of Large Numbers 200
9.4 The Variability of the Sample Mean 201
9.5 The Standard Error of the Mean 204
9.6 The Normal Limit Theorem 208
9.7 Samples and Populations 212

CHAPTER 10 Managing Mean Performance 219
10.1 Benchmarking Mean Performance 221
10.2 The Statistical Size of a Deviation 224
10.3 Decision Making, Hypothesis Testing, and p-Values 226
10.4 Confidence Intervals 230
10.5 One-Sided and Two-Sided Tests 232
10.6 Using StatproGo 232
10.7 Why Standard Deviation Matters 234
10.8 Assessing Detection Power 235

CHAPTER 11 Are These Customers Different? Did the Intervention Work? Looking at Changes in Mean Performance 243
11.1 How Variable Is a Difference? 245
11.2 Describing Changes in Mean Performance 247
11.3 Example 2: Is Product Placement Worth It? 249
11.4 Performing the t-Test with StatproGo 255
11.5 Different Standard Deviations 258
11.6 Analyzing Matched-Pairs Data 261

12.1 How Accurate Are Percentages? 272
12.2 Tests and Confidence Intervals for Proportions 277
12.3 Assessing Changes in Proportions 280
12.4 Using StatproGo 284
12.5 Alternative Methods 284

CHAPTER 13 Using the Relationship between Shares to Build a Portfolio 293
13.1 How to Measure Financial Growth 295
13.2 Risk and Return: Both Matter 298
13.3 Correlation and Industry Structure 300
13.4 The Riskiness of a Portfolio 306
13.5 Balancing Risk and Return 310
13.6 Controlling Risk with TBs 312

CHAPTER 14 Investigating Relationships between Business Variables 319
14.1 Measuring Association with Correlation 320
14.2 Looking at Complex Relationships 324
CHAPTER 20  Extending Regression Models: The Sky Is the Limit  461
20.1 Inputs That Have Varying Effects: Interactions  462
20.2 Inputs That Have Proportional Impacts  470
20.3 Case Study: How Effective Are Catalog Mail-Outs?  474
20.4 More on Time Series  478

Index  485
