Environmental Tax Reform (ETR)

A Policy for Green Growth

Edited by
Paul Ekins and Stefan Speck
Contents

List of Figures xvii
List of Tables xx
Abbreviations xxiii
Notes on Contributors xxviii

Part I. The Need and Rationale for Environmental Tax Reform

1. Introduction to the Issues and the Book 3
   Paul Ekins

2. European Resource Use and Resource Productivity in a Global Context 27
   Stefan Giljum, Christian Lutz, Ariane Jungnitz, Martin Bruckner, and Friedrich Hinterberger

3. Energy Consumption and CO₂ Emissions in the German and British Industrial Sectors 46
   Paolo Agnolucci

   Paolo Agnolucci

Part II. Experiences in Environmental Tax Reform

5. Environmental Taxes and ETRs in Europe: The Current Situation and a Review of the Modelling Literature 99
   Stefan Speck, Philip Summerton, Daniel Lee, and Kirsten Wiebe

6. Introducing Environmental Tax Reform: The Case of the Czech Republic 131
   Petr Šauer, Ondřej Vojáček, Jaroslav Klusák, and Jarmila Zimmermannová
List of Figures

3.4a. The relationship between economic activity and CO₂ emissions in the German industrial sectors 71
3.4b. The relationship between economic activity and CO₂ emissions in the British industrial sectors 72
4.2. Difference between the energy intensity of the sectors assessed in this study and the energy intensity of the industrial sector as a whole 89–90
5.1. The efficient allocation of pollution 111
A8.1. E3ME as an E3 model 196
A8.2. E3ME model description 197
A8.3. Country coverage of GINFORS 198
A8.4. The wheel of GINFORS 200
9.1. Productivity results from E3ME, LSI Scenario 214
9.2. Impact of ETR on energy demand, E3ME, LS1 scenario 217
9.3. Diagram of main economic effects in the models 223
9.4. Sectoral change in output, Germany, 2020, scenario HS1, GINFORS 227
9.5. Sectoral change in output, UK, 2020, scenario HS1, GINFORS 228
10.1. Sum of selected environmentally related taxes and charges as a percentage of average disposable household income, by income groups 240
10.2. Model structure: distributional impacts 259
10.3. Change in household income by quintile, LS1, 2020, E3ME 263
10.4. Simplified model structure of PANTA RHEI 269
10.5. DEMOS module 270
10.6. Total ETR burden across household types 273
10.7. Burden of ETR ranked by income position of household types 274
10.8. Additional energy expenditure as a share in disposable income across households in comparison with the average 275
10.9. Additional expenditure on ‘operation of personal transport equipment’ as a share of disposable income in comparison with the average share 276
10.10. Additional expenditure share for transport services in disposable income across households in comparison to the average share 277
10.11. Changes in the share of expenditure on food in disposable income across household types relative to average change 278
11.1. EU exports to non-EU countries—percentage deviation of HS1 from baseline in 2020 297
11.2. EU exports to non-EU countries—percentage deviation of HS3 from baseline in 2020 298
11.3. Global used material extraction of different material categories, baseline scenario BH 300
11.4. Global shares of used material extraction for country groups, baseline scenario BH 301
11.5. Global used material extraction, three scenarios 302
11.6. Energy-related CO₂ emissions in different world regions, 2000–2030, baseline scenario BH 304
11.7. Global energy-related CO₂ emissions, three scenarios 304
12.1. Environmental industry—world market share of OECD countries 319
12.2. Employment in the German environmental industry 323
12.4. CO₂ emissions from the residential sector in the UK and Germany, 1990–2007 326
12.5. Passive houses in Germany, 1999–2007 327
12.6. CO₂ emissions of road traffic in Germany and the UK, 1990–2007 (in Mt) 328
12.9. Share of renewable energy in Germany, 1998–2009 332
13.1. Hypothesized paths from ETR to higher human well-being 345
