<i>Preface to the Fourth Edition</i>	xiii
<i>Acknowledgements</i>	xv
<i>Notation</i>	xx
<i>Introduction</i>	xxiii

Part I Foundations

Chapter 1	An introduction to natural resource and environmental economics	3
	Learning objectives	3
	Introduction	3
1.1	Three themes	3
1.2	The emergence of resource and environmental economics	4
1.3	Fundamental issues in the economic approach to resource and environmental issues	10
1.4	Reader's guide	13
	Summary	14
	Further reading	15
Chapter 2	The origins of the sustainability problem	16
	Learning objectives	16
	Introduction	16
2.1	Economy–environment interdependence	17
2.2	The drivers of environmental impact	31
2.3	Poverty and inequality	42
2.4	Limits to growth?	46
2.5	The pursuit of sustainable development	50
	Summary	54
	Further reading	55
	Discussion questions	57
	Problems	57
Chapter 3	Ethics, economics and the environment	59
	Learning objectives	59
	Introduction	59
3.1	Naturalist moral philosophies	60

3.2	Libertarian moral philosophy	61
3.3	Utilitarianism	62
3.4	Criticisms of utilitarianism	72
3.5	Intertemporal distribution	75
	Summary	89
	Further reading	89
	Discussion questions	90
	Problems	91
Chapter 4	Welfare economics and the environment	92
	Learning objectives	92
	Introduction	92
Part I	Efficiency and optimality	92
4.1	Economic efficiency	94
4.2	An efficient allocation of resources is not unique	97
4.3	The social welfare function and optimality	99
4.4	Compensation tests	100
Part II	Allocation in a market economy	103
4.5	Efficiency given ideal conditions	103
4.6	Partial equilibrium analysis of market efficiency	106
4.7	Market allocations are not necessarily equitable	109
Part III	Market failure, public policy and the environment	111
4.8	The existence of markets for environmental services	111
4.9	Public goods	113
4.10	Externalities	121
4.11	The second-best problem	129
4.12	Imperfect information	130
4.13	Public choice theory – explaining government failure	131
	Summary	134
	Further reading	135
	Discussion questions	135
	Problems	136
	Part II Environmental pollution	
Chapter 5	Pollution control: targets	139
	Learning objectives	139
	Introduction	139
5.1	Modelling frameworks	140
5.2	Modelling pollution within an economic efficiency framework	142
5.3	Pollution flows, pollution stocks and pollution damage	143
5.4	The efficient level of pollution	144
5.5	A static model of efficient flow pollution	145
5.6	Efficient levels of emission of stock pollutants	149
5.7	Pollution control where damages depend on location of the emissions	149
5.8	Ambient pollution standards	151
5.9	Intertemporal analysis of stock pollution	153
5.10	Variable decay	158

5.11	Departures from convexity or concavity in damage and abatement cost (or pollution benefit) functions	159
5.12	'No regrets' policies and rebound effects	164
5.13	The double dividend hypothesis	165
5.14	Objectives of pollution policy	168
	Summary	172
	Further reading	175
	Discussion questions	176
	Problems	176
Chapter 6	Pollution control: instruments	177
	Learning objective	177
	Introduction	177
6.1	Criteria for choice of pollution control instruments	178
6.2	Cost efficiency and cost-effective pollution abatement instruments	179
6.3	Instruments for achieving pollution abatement targets	181
6.4	Economic incentive (quasi-market) instruments	195
6.5	Pollution control where damages depend on location of the emissions	210
6.6	A comparison of the relative advantages of command and control, emissions tax, emission abatement subsidy and marketable permit instruments	218
	Summary	223
	Further reading	224
	Discussion questions	225
	Problems	226
Chapter 7	Pollution policy with imperfect information	229
	Learning objectives	229
	Introduction	229
7.1	Difficulties in identifying pollution targets in the context of limited information and uncertainty	230
7.2	Sustainability-based approaches to target setting and the precautionary principle	232
7.3	The relative merits of pollution control instruments under conditions of uncertainty	233
7.4	Transactions costs and environmental regulation	243
	Summary	248
	Further reading	249
	Discussion question	249
	Problems	250
Chapter 8	Economy-wide modelling	251
	Learning objectives	251
	Introduction	251
8.1	Input–output analysis	253
8.2	Environmental input–output analysis	257
8.3	Costs and prices	264
8.4	Computable general equilibrium models	268

	Summary	279
	Further reading	280
	Discussion questions	281
	Problems	281
Chapter 9	International environmental problems	282
	Learning objectives	282
	Introduction	282
9.1	Game theory analysis	283
9.2	International environmental agreements	294
9.3	Other factors conducive to international environmental cooperation	299
9.4	Stratospheric ozone depletion	302
9.5	Global climate change	305
	Learning outcomes	337
	Further reading	338
	Discussion questions	340
	Problems	341
Chapter 10	Trade and the environment	342
	Learning objectives	342
	Introduction	342
10.1	An environmental extension to traditional trade theory	343
10.2	Does free trade harm the environment? A partial equilibrium analysis	345
10.3	General equilibrium models of trade and the environment	347
10.4	Do governments have an incentive to manipulate environmental standards for trade purposes?	352
10.5	Environmental policy and competition between jurisdictions for mobile capital	354
10.6	Banning trade in endangered species	356
10.7	The General Agreement on Tariffs and Trade and the World Trade Organisation	357
10.8	The empirical evidence on environmental regulations and the pattern of trade	360
	Summary	363
	Further reading	363
	Discussion questions	364
 Part III Project appraisal		
Chapter 11	Cost–benefit analysis	367
	Learning objectives	367
	Introduction	367
11.1	Intertemporal welfare economics	368
11.2	Project appraisal	378
11.3	Cost–benefit analysis and the environment	392
	Summary	406
	Further reading	407

	Discussion questions	408
	Problems	409
Chapter 12	Valuing the environment	411
	Learning objectives	411
	Introduction	411
12.1	Categories of environmental benefits	412
12.2	The theory of environmental valuation	413
12.3	Contingent valuation	415
12.4	Choice experiments	429
12.5	The travel cost method	435
12.6	Hedonic pricing	442
12.7	Production function-based techniques	451
	Summary	452
	Further reading	453
	Discussion questions	453
	Problems	454
Chapter 13	Irreversibility, risk and uncertainty	455
	Learning objectives	455
	Introduction	455
13.1	Individual decision making in the face of risk	456
13.2	Option price and option value	459
13.3	Risk and irreversibility	462
13.4	Environmental cost–benefit analysis revisited	468
13.5	Decision theory: choices under uncertainty	470
13.6	A safe minimum standard of conservation	472
	Summary	478
	Further reading	479
	Discussion questions	480
	Problems	480
Part IV	Natural resource exploitation	
Chapter 14	The efficient and optimal use of natural resources	485
	Learning objectives	485
	Introduction	485
Part I	A simple optimal resource depletion model	486
14.1	The economy and its production function	486
14.2	Is the natural resource essential?	486
14.3	What is the elasticity of substitution between K and R ?	487
14.4	Resource substitutability and the consequences of increasing resource scarcity	488
14.5	The social welfare function and an optimal allocation of natural resources	492
Part II	Extending the model to incorporate extraction costs and renewable resources	498

14.6	The optimal solution to the resource depletion model incorporating extraction costs	499
14.7	Generalisation to renewable resources	501
14.8	Complications	502
14.9	A numerical application: oil extraction and global optimal consumption	503
	Summary	507
	Further reading	507
	Discussion questions	508
	Problems	508
Chapter 15	The theory of optimal resource extraction: non-renewable resources	509
	Learning objectives	509
	Introduction	509
15.1	A non-renewable resource two-period model	513
15.2	A non-renewable resource multi-period model	515
15.3	Non-renewable resource extraction in perfectly competitive markets	520
15.4	Resource extraction in a monopolistic market	521
15.5	A comparison of competitive and monopolistic extraction programmes	521
15.6	Extensions of the multi-period model of non-renewable resource depletion	523
15.7	The introduction of taxation/subsidies	528
15.8	The resource depletion model: some extensions and further issues	529
15.9	Do resource prices actually follow the Hotelling rule?	530
15.10	Natural resource scarcity	532
	Summary	535
	Further reading	536
	Discussion questions	537
	Problems	537
Chapter 16	Stock pollution problems	538
	Learning objectives	538
	Introduction	538
16.1	An aggregate dynamic model of pollution	539
16.2	A complication: variable decay of the pollution stock	549
16.3	Steady-state outcomes	549
16.4	A model of waste accumulation and disposal	551
	Summary	557
	Further reading	558
	Discussion question	558
	Problem	558
Chapter 17	Renewable resources	559
	Learning objectives	559
	Introduction	559
17.1	Biological growth processes	561
17.2	Steady-state harvests	564
17.3	An open-access fishery	565
17.4	The dynamics of renewable resource harvesting	571

17.5	Should one use a continuous-time model or a discrete-time model of the open-access fishery?	574
17.6	Alternative forms of biological growth function in which there is a positive minimum viable population size	575
17.7	Stochastic fishery models	576
17.8	The private-property fishery	576
17.9	Dynamics in the PV-maximising fishery	584
17.10	Encompassing the open-access, static private-property and PV-maximising fishery models in a single framework	585
17.11	Socially efficient resource harvesting	586
17.12	A safe minimum standard of conservation	589
17.13	Resource harvesting, population collapses and the extinction of species	591
17.14	Renewable resources policy	594
	Summary	601
	Further reading	602
	Discussion questions	604
	Problems	604
Chapter 18	Forest resources	606
	Learning objectives	606
	Introduction	606
18.1	The current state of world forest resources	607
18.2	Characteristics of forest resources	612
18.3	Commercial plantation forestry	614
18.4	Multiple-use forestry	622
18.5	Socially and privately optimal multiple-use plantation forestry	625
18.6	Natural forests and deforestation	626
18.7	Government and forest resources	630
	Summary	631
	Further reading	631
	Discussion questions	632
	Problems	632
Chapter 19	Accounting for the environment	634
	Learning objectives	634
	Introduction	634
19.1	Environmental indicators and state of the environment reporting	635
19.2	Environmental accounting: theory	639
19.3	Environmental accounting: practice	649
19.4	Wealth and genuine saving	659
19.5	Sustainable development indicators	666
19.6	Concluding remarks	674
	Summary	675
	Further reading	676
	Discussion questions	677
	Problems	678
	<i>References</i>	679
