CONTENTS

Prologue ................................................. xv
Introduction ............................................. xxiii
Acknowledgments ....................................... xxix
A Letter from the Next Generation ..................... xxxi

CHAPTER 1  Developing the Business Case .............. 1
Who Should Address This Challenge? ................. 2
Developing the Sustainability Business Case
at the Company Level .................................. 4
   Workforce ........................................... 6
   Customers .......................................... 7
   Regulations ........................................ 8
Developing the Sustainability Business Case
at the Project Level ................................... 12
Chapter Summary—Key Points ......................... 18
Notes ................................................... 19

CHAPTER 2  Sustainability and the Collaborative
Management Model ..................................... 21
The Paradox ............................................. 21
New Levels of Organizational Complexity ............ 22
Evolution of the Six Sigma Leadership Framework... 26
Six Sigma as a Leadership Framework ............... 27
The Collaborative Leadership and
   Governance Model .................................... 30
Developing a Set of Leadership and
   Management Practices ............................... 31
   Annual Planning and Strategy
      Development Workshop ........................... 33
      CMT Strategic Planning Dialogue Agenda .... 33
Contents

Midpoint Dialogue Session ........................................ 33
Weekly Reviews and Alerts Dialogue ............................ 34
Collaborative Management Process Summary ................. 34
The Need for Real-Time Performance Data .................... 34
The Role of the Facilitator/Coach ............................... 35
Moving from Model to Practical Application ................. 36
The Key to Breakthrough Performance ......................... 36
The Need for Discipline and a Collaborative Leadership Environment ........................................ 43
Chapter Summary—Key Points ................................. 45

CHAPTER 3 The Sustainability Transfer Function ............ 47
Transfer Functions and Why They Are Important .......... 47
Building the Sustainability Transfer Function ............ 49
The Transfer Function for Office Waste ...................... 53
The Role of Location ............................................ 58
The Transfer Function for Office Water ...................... 61
Conclusion ...................................................... 64
Chapter Summary—Key Points .................................. 65
Notes ............................................................ 65

CHAPTER 4 Sustainability Measurement and Reporting .... 67
Reporting Overview ............................................. 68
Benefits and Drivers for Reporting ............................. 69
Brand ............................................................ 72
Track Progress toward Goals .................................. 72
Regulatory Compliance ......................................... 72
Shareholder Pressure/Securities and Exchange Commission (SEC) Guidance ................................. 74
Reporting and Measurement Standards/Protocols ......... 75
The Greenhouse Gas Protocol ................................ 76
The Global Reporting Initiative (GRI) ......................... 78
The Climate Registry ........................................... 80
The Carbon Disclosure Project (CDP) ......................... 81
International Standards Organization (ISO) ................. 83
Process and/or Tools ............................................ 83
Contents

Consider Business Goals .................................................. 84
Consider GHG Accounting Principles ................................. 85
Define Organizational Boundaries ........................................ 85
Define Operational Boundaries ............................................. 86
Select Base Year ............................................................... 86
Identify Emissions Sources/Calculate Emissions ....................... 86
Verify Inventory ............................................................... 87
Reporting Emissions .......................................................... 87
Establish a GHG Reduction Target ......................................... 87

Examples of Voluntary Reporting Initiatives ........................... 88
Sustainability Investment-Rating Agencies .............................. 88
Buildings ......................................................................... 90

Chapter Summary—Key Points .............................................. 93

CHAPTER 5 Transformational Change and the Power of Teams .......... 95

Why Green Project Teams Fail ............................................... 96
Uncertainty of Purpose, Lack of Goal Clarity ............................ 96
Narrow Focus ................................................................. 97
Lack of Authority .............................................................. 97
Insufficient Data and Tools for Analyzing the Data ..................... 98
Weak Leadership .............................................................. 98

Eliminating the Potential Failure Modes ................................. 98

The Six Sigma Methodology for Driving Team Success ................. 99
Development of Detailed, One-Page Team Charters ...................... 99
Business Case ..................................................................... 100
Opportunity Statement ....................................................... 100
Goal Statement .................................................................. 101
Project Scope ..................................................................... 102
Team Selection .................................................................... 102

Team Charter Evaluation ..................................................... 103
Establishing a Supporting Leadership Structure ......................... 103
Sponsors .......................................................................... 103
Champions ....................................................................... 104
Adoption of a Consistent Team Problem-Solving Model Known as DMAIC

Define ................................. 106
Measure ............................... 107
Analyze ............................... 109
Improve ............................... 111
Control ............................... 113

Blitz Teams. ......................... 115

Summary of DMAIC ...................... 116
Change Management ................. 116
Do You Change or Just Think about Change? 117

Myriad Theories, Universal Formula

Create a Shared Need .............. 119
Shape a Vision ....................... 119
Mobilize Commitment .......... 121
Monitor Progress ................. 121
Make the Change Last ........... 121

Organized for Change ............ 126
Leading Change ..................... 127

Six Sigma Integrated Team Framework as a Model for Driving Transformational Change

Sponsors’ Launch ................. 128
Champions’ Launch ............ 133
Project Launch .................. 134

DMAIC, Blitz Teams, Organization-Wide Adoption. 135
Putting It All Together ......... 135

The Six Sigma Methodology Applied to Sustainability Projects

Background ...................... 136
Define ............................... 136
Measure ............................. 137
Analyze .............................. 137
Improve ............................. 138
Control .............................. 139

Chapter Summary—Key Points ........ 140
Note .................................. 141
## CHAPTER 6  Sustainability and Real Estate

143

Real Estate Decisions Relating to Energy
and the Environment 146
The Right Steps in the Right Order 147
Reduce Your Space Requirements 149
Factor Carbon into Location Decisions 150

*Transportation* 151
*Energy and Water Consumption* 151
*Electrical Power Sources* 151
*Site Selection for New Space* 151
*Physical Risk of Climate Change* 152

Apply Green Standards to New Buildings or Space 153
Existing Building Operations and Retrofits 156
Engage Employees in Support of Green Initiatives 158
Green Leasing 160
Financing Multitenant Building Retrofits
and Existing Lease Constraints 165
Measuring Success and Environmental Reporting 166
Chapter Summary—Key Points 167
Notes 168

## CHAPTER 7  Six Sigma Sustainability Project Examples

169

Selecting Projects 169
Example Project: Reducing Cost and Carbon
Through Energy Efficiency in Office Buildings 171
Example Project: Reducing the Environmental Impact of Company Office Space through
Increased Office Space Agility 177
Example Project: Greening Leased Space 186

*Define* 187
*Measure* 188
*Analyze* 189
*Improve* 189
*Control* 190

Chapter Summary—Key Points 190
Notes 190
CHAPTER 8  Design for Six Sigma ................................. 193
Designing the Corporate Sustainability Program
Using the House of Quality ................................ 195
   Step 1: Identify and Prioritize Customer Requirements ........ 195
   Step 2: Translate Customer Requirements into Measurements That Reflect Those Requirements .......... 197
   Step 3: Set Performance Targets .......................... 198
   Step 4: Identify Critical Process Features Required to Achieve Performance Targets .... 200
   Step 5: Design the Processes That Will Meet the Critical Features ...... 204
Design and Innovation in Projects Using DMADV ... 208
Measure Phase: Operational Definitions .............. 213
Chapter Summary—Key Points ......................... 221

CHAPTER 9  Stakeholder Management ......................... 223
Defining Stakeholder Management ....................... 225
Understanding Stakeholder Needs ...................... 225
Converting Needs to Requirements ..................... 226
   The Stakeholder’s Type and Level of Influence
   on the Sustainability Project/Initiative ............... 230
   Assignment of a Team Member to Own
   a Stakeholder Relationship and
   Drive the Strategy ..................................... 232
   Likelihood/Degree of Stakeholder Support/
   Opposition to a Project and Associated Factors .... 235
The Web of Stakeholder Groups ......................... 237
Conclusion ............................................. 242
Chapter Summary—Key Points .......................... 243
Notes ............................................... 244

CONCLUSION  Letters to Tomorrow’s Corporate Leaders ........ 245
Letter to Tomorrow’s Chief Sustainability Officer .... 245
Letter to Tomorrow’s Corporate Real Estate Leader .. 247
