1 Introduction 1
What is rational choice theory? A short intellectual history 3
Confusion despite the apparent consensus 6
This book: the task and the plan 11

2 What is rational choice theory? 16
The elements in the framework 16
Versions of the rational choice approach 24
Rational choice as an intentional-action approach 27
How does the rational choice approach explain? 30
Is everyone using the rational choice approach then? 44
Bounded rationality 46
The evolutionary approach 49
Other evolutionary theories 53
Conclusion 54

3 The self-interest assumption 57
The importance of assumptions about people's motives 58
The RC approach and self-interest assumptions 60
The nature of self-interest 62
Why assume self-interest? 73
Alternatives to self-interest 87
Conclusions: potential and limits 96
4 Culture, identity and symbols

The RC approach needs what the cultural approach can offer
But the cultural approach also needs the RC approach
Social status and distributional consequences
Rationality, emotion and rationalistic explanation
Alternatives: how can it be done?
Conclusions: potential and limits

5 Individuals and institutions

Is the RC approach at heart anti-institutionalist?
How agents affect institutions
How institutions affect individual agents' preferences and behaviour
Explaining institutional stability
Explaining institutional change
Conclusions: potential and limits

6 The use and misuse of models

Unrealisticness
Formality
Empirical tests, or: why so many models and so little empirical testing?
General explanations and case studies
Conclusions: potential and limits

7 Equilibrium

The notion of equilibrium: the basic intuitions
Equilibrium explanations
Institutional stability and change
Equilibrium predictions
Non-equilibrium play and game theory
Is it at all worthwhile studying Nash equilibrium?
Equilibrium as a model concept
Conclusions: potential and limits
8 The micro-level mechanism 227

Mathematics can be useful even when people do not think mathematically 237
Sometimes people actually approximate to full rationality 240
Instrumentalism 240
Other mechanisms that generate rational behaviour 1:
selection pressure 245
Other mechanisms that generate rational behaviour 2:
learning and imitation 250
Conclusion: potential and limits 253

9 Conclusion 255
