The Ethics and Politics of Environmental Cost-Benefit Analysis

Karine Nyborg
Preface xi

PART I Basics 1

1 Introduction 3
   Aim of this book 3
   Cost-benefit analysis: background 5

2 The purpose of a project analysis 8
   Purpose A: Ranking 9
   Purpose B: Providing background information 10

3 Types of analysis 14
   Cost-benefit analysis 14
   Cost-effectiveness analysis 15
   Cost-impact analysis 16
   Type of analysis, aim of analysis 17

4 Efficiency 19
   Separating efficiency and distribution 19
   The Pareto criterion 21
   Potential Pareto improvements and the Hicks–Kaldor criterion 22
   The social welfare criterion 25
PART II
Measurement of utility and welfare

5 Utility
What is utility? 29
Can individual environmental benefits be valued in money? 33
Can individual net benefits be measured in money? 36

6 Social welfare
What is social welfare? 38
Welfarism 39
Do aggregate net benefits measure social welfare change? 41
On welfare weights: ethics 43
On welfare weights: the marginal utility of income 44

7 Equal welfare weights
On systematic bias 46
Optimal income distribution 48
Modest distributional effects 49
Efficiency, not distribution 50

8 Benefits measured in environmental units 53

9 Disagreement
Subjective welfare judgments 56
Subjective utility comparisons 58

10 Willingness to pay for the social good
The citizen and consumer perspectives 61
Social values 64
Measuring political support 66

11 The main message so far 68
PART III
CBA and democratic decision-making

12 Democratic decision-making
The decision-making process 73
CBA and majority voting 74
Consumer sovereignty 75
Criteria for democratic decision-making 76

13 Sufficient background information
Drowning in details? 78
Aggregate net willingness to pay 79:
Information about project costs 80
Willingness to pay for environmental change 81
Willingness to pay by groups 82
Physical unit environmental information 84
If you had to choose: valuation or not? 85
Summing up: sufficient background information 87

14 Indicators
Aggregate net benefits as an indicator 90

15 Politicians' attitudes to CBA
Listening to politicians 93
Did they use CBA? 94
Is CBA politically neutral? 96

PART IV
Recommendations

16 What to do?
Question 1: What precisely do we want to know? 101
Question 2: Cost-benefit or cost-impact? 104
Question 3: How much to value? 105
Question 4: Should one use explicit welfare weights? 109
Question 5: Should economic analysis be eschewed altogether? 111
Question 6: But how can we know which project is best? 112
Contents

17 Concluding remarks
