Introduction 1
Piero Conforti

PART I THE GLOBAL AGRICULTURE OUTLOOK

1. World food and agriculture to 2030/2050 revisited. Highlights and views four years later 11
Nikos Alexandratos

Interim report projections and reality checks 14
Biofuels: significance for the long-term outlook 29
Food consumption and nutrition in developing countries 37
Conclusions 44
Annex 1.1: Cereal production in developing countries 47

2. World agriculture in a dynamically changing environment: IFPRI’s long-term outlook for food and agriculture 57
Siwa Msangi and Mark Rosegrant

Drivers of change in food systems 59
Quantitative outlook to 2050 68
The role of biofuels 75
Implications for food security 85
Conclusions 88
3. How can climate change and the development of bioenergy alter the long-term outlook for food and agriculture?

Gunther Fischer

Methodology and data
Baseline assessment
Climate change impacts on crop suitability and production potential
Impacts of climate change on world food system indicators
Impacts of biofuel expansion on world food system indicators
Impacts of first-generation biofuel expansion on food system indicators
Second-generation biofuels
Combined impacts of climate change and expansion of biofuel production on world food system indicators
Conclusions
Annex 3.1: The modelling framework
Annex 3.2: Aggregation of world food system components to world regions

PART II GROWTH, POVERTY AND MACROECONOMIC PROSPECTS

4. Poverty, growth and inequality over the next 50 years

Evan Hillebrand

Poverty measurement
Explaining changes in poverty, 1981 to 2005
Forecasting economic growth
Forecasting poverty and inequality
The market first scenario
How might distribution shifts affect future poverty headcounts?
The trend growth scenario
Conclusions

5. Macroeconomic environment and commodity markets: a longer-term outlook

Dominique van der Mensbrugghe, Israel Osorio-Rodarte, Andrew Burns and John Baffes

The nature of the recent commodity boom
The energy/non-energy price link
The macroeconomic environment 203
Climate change 209
Poverty implications 214
Conclusions 224
Annex 5.1: The model used for climate change simulations 228

PART III LAND, WATER AND CAPITAL REQUIREMENTS

6. The resources outlook: by how much do land, water and crop yields need to increase by 2050? 233
   Jelle Bruinsma

    How much more needs to be produced? 235
    What are the sources of growth in crop production? 238
    By how much does the arable land area need to increase? 242
    How much land is there with crop production potential? 242
    How much more water will be required in irrigation? 251
    By how much do crop yields need to rise? 261
    Summary and conclusions 271
    Annex 6.1: Countries included in the analysis 276
    Annex 6.2: Crops included in the analysis 278

7. Investment in developing countries’ food and agriculture: assessing agricultural capital stocks and their impact on productivity 279
   Stephan von Cramon-Taubadel, Gustavo Anriquez, Hartwig de Haen and Oleg Nivyevskyi

    Approaches to measuring investment and agricultural capital stock 281
    Results: development of the agricultural capital stock since 1975 287
    Agricultural capital stock and productivity 303
    Conclusions 313

8. Capital requirements for agriculture in developing countries to 2050 317
   Josef Schmidhuber, Jelle Bruinsma and Gerold Boedeker

    Methodology and measurement 318
    The results 323
    Performance indicators for agricultural production, capital stocks, labour and land 327
    Summary and conclusions 338
    Annex 8.1: Countries included in the analysis 342
Annex 8.2: Cumulative investment requirements for 2005/2007 to 2050, by region (billion 2009 USD) 343

PART IV RAISING PRODUCTIVITY: RESEARCH AND TECHNOLOGY

9. Setting meaningful investment targets in agricultural research and development: challenges, opportunities and fiscal realities 347
   Nienke Beintema and Howard Elliott

   Trends in agricultural R&D investments 348
   Three definitions of underinvestment in agricultural R&D 357
   Analysing the agricultural research intensity ratio 363
   Challenges and essential investments 376
   Concluding remarks 381

10. Can technology deliver on the yield challenge to 2050? 389
    Tony R. Fischer, Derek Byerlee and Gregory Owen Edmeades

    Defining key concepts 392
    Setting the scene: recent trends and the challenge to 2050 397
    Sources of yield gains in the breadbaskets 405
    Closing existing yield gaps 416
    Increasing yield potential 422
    Prices, efficiency, productivity and R&D investment 437
    Conclusions 447

CONCLUSIONS

11. Critical evaluation of selected projections 465
    Nikos Alexandratos

    Prices and quantities in the baseline scenarios 466
    Climate change impact on agriculture 472
    Impact of biofuels 484
    Demography, growth, inequality and poverty 494
    Sub-Saharan africa 500

viii
12. Challenges and policies for the world agricultural and food economy in the 2050 perspective

Piero Conforti and Alexander Sarris

Challenges and opportunities
Can data and analyses be improved?
Policy directions
Areas for future policy and analytical focus
