xiii
1.6 How Economists Study Complex Systems 38
1.6.1 Economic models 38
1.6.2 The dangers lurking behind models 39
1.6.3 Economic models, holism, and the scientific method 41
1.7 A Very Brief History of Thought on Economic Development 42
1.7.1 Economic thought before 1900 42
1.7.2 Fading interest in development in the late 1800s 43
1.7.3 Renewed interest in growth after World War II 44
1.7.4 Development economics and growth theory 45
1.7.5 The biases of growth theory 45
1.7.6 Heterodoxy 47
1.8 What Will Future Economic Development Look Like? 48
1.8.1 Is further economic growth necessary? 49
1.8.2 The superfluity of economic growth 49
1.8.3 Environmental limits to growth 50
1.8.4 Sustainable economic growth 51
Appendix 1.1: The Mechanics of Economic Growth 54
References 57

CHAPTER 2 Measuring Economic Development 59

2.1 Real GDP Per Capita 61
2.1.1 Gross domestic product (GDP) 61
2.1.2 GDP versus GNP 63
2.1.3 Adjusting for price differences 63
2.1.4 Adjusting for purchasing power 64
2.1.5 The picture that Maddison's data paint 66
2.1.6 Are standards of living becoming more equal? 69
2.2 Finding Better Measures of Economic Development 70
2.2.1 Household production 71
2.2.2 Accounting for informal production 72
2.2.3 The value of leisure 74
2.2.4 Counting the "bads" as well as the goods 75
2.2.5 Adjusting GDP for environmental costs and benefits 76
2.2.6 Welfare and lifetime consumption 77
2.2.7 Adjusting for variety 80
2.3 Beyond Adjustment: New Measures of Economic Development 82
2.3.1 Improvements in human health 82
2.3.2 The relationship between output growth and health 85
2.3.3 Life expectancy and life's order 87
2.3.4 Education, technology, and what else? 87
2.3.5 The Human Development Index 89
CHAPTER 3 Holistic Measurement of Economic Development

3.1 Thinking About Happiness
   3.1.1 Changing perceptions of the ideal life
   3.1.2 Psychology and life satisfaction

3.2 Happiness Studies
   3.2.1 Surveys of life satisfaction
   3.2.2 What surveys of happiness tell us
   3.2.3 The Human Development Index again
   3.2.4 Statistical studies of happiness

3.3 Neuroscientific Evidence on Happiness
   3.3.1 Linking brain activity to human happiness
   3.3.2 The discoveries of neuroscience
   3.3.3 Homeostasis, empathy, learning, and other findings
   3.3.4 Behavioral economics and the neuroscientific findings

3.4 Economic Development and Human Happiness
   3.4.1 Is economic growth just a hedonic treadmill?
   3.4.2 Mandeville’s “Fable of the Bees”
   3.4.3 Growth, inequality, and happiness
   3.4.4 Individual happiness and economic growth
   3.4.5 Checking in with Kabamba and Banks

3.5 How Economists Study Economic Development
   3.5.1 How did economics become such a narrow field?
   3.5.2 Models and the human brain’s preference for patterns
   3.5.3 The need for reflexivity
   3.5.4 The Happy Planet Index

3.6 Concluding Thoughts

References
4.1.3 The importance of institutions 147
4.1.4 Transportation and communications 148
4.1.5 National welfare 149
4.1.6 The Smithian model 150
4.1.7 Adam Smith’s legacy 151

4.2 The Classical Economists and Diminishing Returns 152
4.2.1 Malthus’ theory of population 152
4.2.2 The “Classical” model 154
4.2.3 An example of diminishing returns 154
4.2.4 The Classical equilibrium 156
4.2.5 An evaluation of the Classical model 158
4.2.6 Income distribution according to the Classicals 160
4.2.7 John Stuart Mill’s recognition of technological progress 162
4.2.8 Assessing the contributions of the Classicals 162

4.3 Karl Marx 163
4.3.1 Karl Marx and the Classical School 164
4.3.2 Marx’s model of capitalist development 166
4.3.3 An assessment of Marx and Marxism 169

4.4 The Growth of Neoclassical Economics 172
4.4.1 Scientific reductionism 173
4.4.2 Some observations on Neoclassical economics 174

4.5 The Harrod-Domar Model 175
4.5.1 The “Keynesian” Harrod-Domar model 176
4.5.2 The supply side of the Harrod-Domar model 177
4.5.3 The popularity of the partial Harrod-Domar model 178
4.5.4 The incremental capital-output ratio (ICOR) 179
4.5.5 The demand side of the Harrod-Domar model 180

4.6 Summary: What the Models Tell Us about Development 183

References 187

CHAPTER 5 Solow’s Neoclassical Growth Model 189

5.1 Introduction to the Solow Model 190
5.1.1 The Neoclassical production function 191
5.1.2 Consumption and saving 193
5.1.3 The capital stock 194
5.1.4 The Solow growth equilibrium 195

5.2 The Rate of Saving and the Steady State 196
5.2.1 The rate of saving and output growth 196
5.2.2 Comparative statics 197
5.2.3 Dynamic analysis 198
5.2.4 What the Solow model reveals 199
5.3 Population Growth and the Solow Model 199
  5.3.1 Population growth and the steady state 200
  5.3.2 Population growth increases total output 201
5.4 Technological Change 201
  5.4.1 Technical change and the steady state 202
  5.4.2 Technological change generates permanent growth 203
  5.4.3 The steady state with technology-driven growth 204
  5.4.4 Correlation does not imply causation 204
  5.4.5 Technological change and the growth path 205
  5.4.6 Summarizing the Solow model 206
5.5 Applying the Solow Model 207
  5.5.1 The Asian "economic miracle" 207
  5.5.2 The reaction to Krugman's analysis 209
  5.5.3 The Soviet Union and the Solow model 210
  5.5.4 Recent Russian economic growth 211
5.6 Economic Growth Paths with Technological Change 213
  5.6.1 Long-run growth vs. transitional growth 213
  5.6.2 How countries "catch up" 214
5.7 Rebelo's AK Model: A Special Case of the Solow Model 217
  5.7.1 The production function and the capital share \( \alpha \) 217
  5.7.2 The special case of no fixed factors 218
  5.7.3 What does the AK model tell us about growth? 219
5.8 Smith to Solow: Some Conclusions 220
  5.8.1 Comparing the Solow model with earlier models 220
  5.8.2 Evidence supporting the Solow model 222
  5.8.3 Weaknesses of the Solow model 223
  5.8.4 The importance of diminishing returns 224
Appendix 5.1: The Cobb-Douglas Production Function 227
References 231

CHAPTER 6 Economic Development and the Natural Environment 233

6.1 Limits to Growth 236
  6.1.1 Optimists, skeptics, and scientists 236
  6.1.2 This time we should be concerned 238
  6.1.3 Must we stop economic growth to survive? 239
  6.1.4 Stopping growth is also problematic 240
6.2 Technological Change and Nature's Resources 240
  6.2.1 Technology and natural resources 241
  6.2.2 Effective supply of exhaustible resources 243
  6.2.3 A model of effective exhaustible resource supply 244
6.2.4 Effective resource supply with technological change 245
6.2.5 Further examples: Effective supply with growth 246
6.2.6 Which example is most realistic? 247
6.2.7 Technological change and exhaustible resources 247

6.3 Resource Prices and Technological Change 248
6.3.1 Hotelling’s rising prices, history’s falling prices 248
6.3.2 Do prices provide accurate signals? 250

6.4 Global Warming 252
6.4.1 The issue of global warming 252
6.4.2 Evidence of global warming 254
6.4.3 Projections of global warming 254
6.4.4 More uncertainty: Feedback 256
6.4.5 Stabilizing temperatures 256

6.5 The Loss of Biodiversity 257
6.5.1 The issue of biodiversity 258
6.5.2 The services of nature 259
6.5.3 The value of biodiversity 261

6.6 The Solow Model and Renewable Resources 262
6.6.1 An enhanced Solow model 263
6.6.2 There must be technological change in both spheres 267
6.6.3 Summarizing the conclusions of the enhanced Solow model 268

6.7 A Strategy for the Future 269
6.7.1 Net domestic product 269
6.7.2 The graphic cost of resource depletion 270
6.7.3 Refining the definition of sustainable development 272

References 276

CHAPTER 7 Technological Change: What Is It and How Do We Model It? 279

7.1 Introduction to Technology and Technological Change 280
7.1.1 Technological change and the production function 282
7.1.2 A more holistic definition of human technology 283
7.1.3 The diversity of technological change 286
7.1.4 A historical view of technology 288
7.1.5 Ranking technological breakthroughs 289

7.2 Measuring Technological Change 291
7.2.1 The sources of growth equation 291
7.2.2 Estimates of the Solow residual 293
7.2.3 Inaccuracies in measuring inputs and output 293
7.2.4 Sustainable technological progress 295
xx Contents

8.3.5 Case study: Finding the right combinations in Peru 348
8.3.6 Protectionism and creative destruction 349
8.3.7 The Holmes and Schmitz model 350
8.3.8 Protectionism and paradigm shifts 351
8.3.9 When is technological change progress? 352

8.4 Technology and Developing Economies 353
8.4.1 Endogenous technological change and convergence 354
8.4.2 Can technology transfers close the gap? 355

8.5 Technology and the Natural Environment 357
8.5.1 Making environmentally friendly technology “profitable” 358
8.5.2 Making inter-generational decisions 359
8.5.3 Environmental costs and true economic development 359
8.5.4 The Jevons effect complicates adjustment 361

8.6 Conclusions and a Critique 362
Appendix 8.1: Mathematical Proof of the Positive Effect of $\beta$ 366
Appendix 8.2: A Mathematical Version of the Schumpeterian Model 367
References 371

PART III Key Elements of Economic Development 375

CHAPTER 9 Population Growth 377

9.1 The Many Views of Population Growth 379
9.1.1 Population growth’s congestive effects 380
9.1.2 People as the source of technological progress 380
9.1.3 Population growth, economies of scale, and congestion 381
9.1.4 The changing effect of growth on population 382

9.2 A Brief Demographic History 382

9.3 The Components of Population Growth 386
9.3.1 Historical examples 387
9.3.2 Demographic transition 389
9.3.3 Patterns of population growth: Summary 391

9.4 Explaining the Patterns of Population Growth 392
9.4.1 Kremer’s model of long-run economic growth 392
9.4.2 Galor and Weil’s model of human capital accumulation 395
9.4.3 Jones’ model of the production function of ideas 396
9.4.4 Leibenstein’s model of the marginal child 397
9.4.5 Why birth rates have declined 398
9.4.6 Concluding thoughts on the population transition 399
9.4.7 China’s policy of birth planning 400
9.5 The Short-Run Effects of Shifts in Population Growth 401
  9.5.1 Population profile 401
  9.5.2 The dependency ratio 404
  9.5.3 The importance of the population profile 406
9.6 Population Growth and the Natural Sphere 406
  9.6.1 Population growth in the natural sphere 407
  9.6.2 Technological change and population growth in the natural sphere 408
9.7 Summary and Some Conjectures 409
  9.7.1 Projected future population growth 410
  9.7.2 Consequences of future population growth 411
  9.7.3 Further issues 412
References 414

CHAPTER 10 Human Capital: Humans' Acquired Abilities 417

10.1 Definition of Human Capital 419
10.2 Education 420
  10.2.1 Trends in education 420
  10.2.2 Gender and education 423
  10.2.3 Convergence in educational opportunities 424
  10.2.4 Summary of the state of education in the world 426
10.3 The Costs and Benefits of Education 427
  10.3.1 Net returns to education 427
  10.3.2 Private versus social returns to education 429
  10.3.3 Estimates of the returns to education 431
  10.3.4 Developing country expenditures on education 434
  10.3.5 The statistical evidence on education is not entirely clear 434
  10.3.6 Diminishing returns and human capital 436
  10.3.7 Human capital and R&D activity 436
10.4 The Optimal Supply of Education with Externalities 438
  10.4.1 Human capital and externalities 439
  10.4.2 A case of multiple equilibria 440
  10.4.3 Why private education falls short of social needs 443
  10.4.4 Further difficulties in setting education policy 444
  10.4.5 The roles of education in the economic and social spheres 445
10.5 Child Labor and Human Capital 447
  10.5.1 Child labor throughout history 447
  10.5.2 The economics of child labor 448
  10.5.3 Policies to deal with child labor 450
10.6 Summary and Conclusions 450
References 453
CHAPTER 11 The Financial Sector of the Economy 455

11.1 Saving 457
   11.1.1 The population profile and saving 459
   11.1.2 Changing profiles and savings rates: The evidence 460
   11.1.3 Research using the World Bank saving data base 461
   11.1.4 Saving for the environment: What the evidence implies 462
11.2 The Fundamental Role of the Financial Sector 463
   11.2.1 Financial failure is a constant 463
   11.2.2 A simple model of the financial sector 465
   11.2.3 Extending the analysis to the whole economy 466
11.3 Market Failures in the Financial Sector 467
   11.3.1 The possibility of default 468
   11.3.2 Contract enforcement in Taiwan 468
   11.3.3 Enforceable contracts do not eliminate all risk 469
   11.3.4 The adverse selection problem 471
   11.3.5 The moral hazard problem 472
   11.3.6 Government regulation and the information problem 472
   11.3.7 Property rights and collateral: A role for government 474
   11.3.8 Financial intermediaries also face perverse incentives 475
   11.3.9 Financial intermediaries versus financial markets 476
11.4 Microfinance 477
   11.4.1 The Grameen Bank of Bangladesh 477
   11.4.2 The Grameen model is not new 479
   11.4.3 Nacional Monte de Piedad 480
   11.4.4 The future of microfinance 481
11.5 Systemic Failures in the Financial Sector 482
   11.5.1 Interest rate ceilings 483
   11.5.2 Human psychology and self-imposed repression 484
   11.5.3 Culture and the financial sector: Islamic finance 486
   11.5.4 Crony capitalism: Private financial repression 488
11.6 Crony Capitalism and the Natural Environment 490
   11.6.1 The financial system's bias towards the economic sphere 491
   11.6.2 The conflicting consequences of financial deregulation 492
11.7 Summary and Conclusions 493

References 496

CHAPTER 12 Institutions and Sustainable Development 499

12.1 The Role of Institutions in Human Society 501
   12.1.1 Dependence on strangers is problematic 503
   12.1.2 Getting the institutions right 504
## Contents

12.1.3 Not all institutions are equally flexible 505  
12.1.4 The relationship between formal and informal institutions 506  
12.1.5 The complexity and inconsistencies of change 508  

12.2 Human Behavior and Institutions 508  
12.2.1 Individual rationality does not guarantee social success 509  
12.2.2 The tragedy of the commons 510  
12.2.3 Game theory and the tit for tat strategy 512  
12.2.4 Results of the 2004 tournament 515  
12.2.5 Sometimes people are irrational 516  

12.3 Institutions and Exchange 517  
12.3.1 Transactions costs and economic efficiency 518  
12.3.2 The evolution of markets 519  
12.3.3 Most human exchanges and negotiations do not involve markets 521  
12.3.4 Social capital 522  

12.4 Culture 524  
12.4.1 Case study: A culture clash and exploitation 525  
12.4.2 Cultures and subcultures 526  
12.4.3 Symbolic violence — The iron hand of culture 527  
12.4.4 The blinding influence of culture 530  

12.5 The Importance of Institutions for Economic Development 531  
12.5.1 Institutions and innovation 531  
12.5.2 Institutions and sustainability 532  

12.6 Nation Building: Defying the Strength of Institutions 533  
12.6.1 The Paris Conference and the failure of nation building 534  
12.6.2 The failure of Paris did not deter further nation building 535  
12.6.3 Is gradual change more successful? 538  

12.7 Summary and Conclusions 539  

Appendix 12.1: Empirical Studies of Institutions and Economic Growth 542  
References 545  

CHAPTER 13 Formal Government Institutions 547  

13.1 The Economic Roles of Government 549  
13.1.1 Adam Smith’s basic functions of government 550  
13.1.2 Externalities and government policy 552  
13.1.3 Externalities and the holistic nature of human welfare 553  
13.1.4 Imperfect competition and government policy 555  
13.1.5 Intertemporal decisions 556  
13.1.6 Macroeconomic stability 557  
13.1.7 Achieving a just distribution of society’s production 557
13.1.8 Government leadership in changing the institutional structure
13.1.9 There are no human rights without economic rights
13.1.10 Summarizing the motivations for collective government action

13.2 Government Failures
13.2.1 Why government may fail to accomplish its goals
13.2.2 Rent seeking
13.2.3 An example of rent seeking
13.2.4 A final comment on rent seeking
13.2.5 The comparative advantage of government

13.3 Corruption
13.3.1 Casual evidence of corruption
13.3.2 Measures of worldwide corruption
13.3.3 The conditions for corruption
13.3.4 How can corruption be reduced?
13.3.5 Measuring the effect of corruption on growth

13.4 Informal Activity: Making the Best of Bad Institutions
13.4.1 Informality is a widespread phenomenon
13.4.2 Informal economic activity is a form of rent evasion
13.4.3 Estimates of informal activity
13.4.4 Informality is more prevalent in developing countries
13.4.5 Informality and development
13.4.6 Summarizing the consequences of informality

13.5 The Institution of Intellectual Property Rights
13.5.1 The history of patents and copyrights
13.5.2 The patent as a property right to an idea
13.5.3 The cost of protecting intellectual property rights
13.5.4 International protection of intellectual property rights
13.5.5 Patents as an example of the clash of formal and informal incentives

13.6 Summary and Conclusions

PART IV International Economic Integration

CHAPTER 14 International Trade and Development

14.1 The Growth of International Trade
14.1.1 New transport technologies
14.1.2 Is trade an engine or handmaiden of growth?
14.2 Orthodox Economic Analysis of International Trade 604
14.2.1 The production possibilities frontier 604
14.2.2 Consumer demand and indifference curves 605
14.2.3 Combining the supply and demand sides of the economy 607
14.2.4 The gain from international exchange 609
14.2.5 The gain from international specialization 611
14.2.6 Welfare gains from trade according to the HO model 612
14.2.7 An evaluation of the HO model and the gains from trade 612
14.3 International Trade and Economic Growth 614
14.3.1 International trade and Schumpeter’s model of innovation 616
14.3.2 Trade and technology transfers 617
14.3.3 Statistical evidence on trade and development 618
14.3.4 What does the statistical evidence suggest? 619
14.3.5 Conclusions suggested by the statistical evidence 620
14.4 Why Free Trade May Not Benefit a Country 622
14.4.1 Adjustments to trade are costly 623
14.4.2 The example of NAFTA 625
14.4.3 Shifts in the terms of trade 626
14.4.4 Infant industries 628
14.4.5 Increasing returns to scale 630
14.4.6 Manufacturing, agriculture, and technological change 633
14.4.7 Enclaves, maquiladores, and spillovers 634
14.5 The Environmental Impact of International Trade 636
14.5.1 Shifting GHG emissions to less developed countries 636
14.5.2 Institutional failures in the global food distribution system 637
14.5.3 The GHGs embedded in trade 638
14.5.4 Another example of GHGs embedded in trade 639
14.6 Summary and Concluding Remarks 640
References 643

CHAPTER 15 International Investment, International Finance and Economic Development 647

15.1 The Economics of International Investment and Finance 649
15.1.1 A traditional model of international investment 650
15.1.2 Risk and diversification 653
15.1.3 The long-run dynamic gains from international investment 653
15.1.4 Schumpeterian innovation and international investment 654
15.2 International Financial Flows and Economic Crises 656
15.2.1 International finance in the nineteenth century 656
15.2.2 The case of Mexico 657
15.2.3 Global finance up to 1980 658
15.2.4 The resumption of private international lending (and borrowing) 659
15.2.5 The macroeconomics of international investment 660
15.3 The Aftermath of the 1982 Debt Crisis 661
15.3.1 The high levels of debt in 1982 661
15.3.2 Reaching an agreement 663
15.3.3 Another crisis in Mexico 666
15.3.4 The Asian crisis of 1997 667
15.3.5 Some common threads 669
15.3.6 Foreign debt and currency mismatches 670
15.3.7 Can financial crises be avoided? 671
15.3.8 A note on exchange rate uncertainty 672
15.4 Foreign Direct Investment 674
15.4.1 The growth of FDI and TNCs 675
15.4.2 The history of TNCs 675
15.4.3 TNCs and international trade 678
15.4.4 TNCs and the spread of technology 678
15.4.5 Is FDI less volatile than other financial flows? 679
15.5 Why Have Transnational Corporations Grown? 680
15.5.1 Why TNCs dominate the economic sphere 681
15.5.2 TNCs are altering the economic and social spheres 683
15.6 A Final Note 684

CHAPTER 16 International Economic Policy: Heterodox Approaches 691

16.1 Mercantilism and the Colonial System 693
16.1.1 The example of Brazil 694
16.1.2 Mercantilism after Brazil’s political independence 696
16.1.3 Brazil in the 1930s 698
16.1.4 From accidental to planned industrialization 699
16.2 Interpreting Brazil’s Colonial and Post-Colonial Experiences 700
16.2.1 Dependency theory 700
16.2.2 The Structuralist school 701
16.3 The Agglomeration of Economic Activity 702
16.3.1 The causes of agglomeration 703
16.3.2 The agglomeration of innovative activity 704
16.3.3 The changing patterns of economic activity 705
16.3.4 Immigration and agglomeration 707
16.3.5 Immigrants and the brain drain 710
16.3.6 Immigrants and agglomeration again 712
16.4 Import Substitution Industrialization (ISI) 712
16.4.1 Import substitution policies 713
16.4.2 An assessment of import substitution policies 715
16.4.3 An extreme example of ISI 718
16.4.4 Lessons from ISI 719
16.5 Trade, FDI, and Agglomeration: Modern Mercantilism? 721
16.5.1 The recent evolution of mercantilism 721
16.5.2 TNCs and international economic policy 723
16.5.3 Further concerns about TNCs 724
16.5.4 Neocolonialism? 724
16.6 Foreign Aid 727
16.6.1 Foreign aid and GDP growth 727
16.6.2 Domestic capabilities and foreign aid 729
16.6.3 Developed countries’ commitment to aid 729
16.7 Concluding Remarks 730

PART V Development Issues 739

CHAPTER 17 The Distribution of Income and Wealth 743
17.1 Economic Development and Structural Change 744
17.1.1 An orthodox explanation of structural change 744
17.1.2 Unbalanced growth 745
17.1.3 Unequal income elasticities of demand 746
17.1.4 The costs of structural change 750
17.2 Measuring the Distribution of Income 750
17.2.1 First look at inequality 751
17.2.2 The Lorenz curve 751
17.2.3 Longitudinal data 755
17.3 Long-Term Trends in the Distribution of Income 756
17.3.1 The distribution of income in the distant past 757
17.3.2 Estimating historical Gini coefficients 758
17.3.3 The distribution of wealth 760
17.4 The Relationship between Growth and Income Distribution 762
17.4.1 The Kuznets curve 762
17.4.2 Trends in world income inequality: The global Gini 763
17.4.3 Does inequality reduce growth? 765
17.4.4 Technological progress and income inequality 766
17.4.5 How to reduce inequality in a growing economy 767
17.5 What Is the Most Desirable Distribution of Income?
17.5.1 Elements of a "just society" 768
17.5.2 Rawls' "veil of ignorance" 769
17.5.3 Can humanity achieve a just society? 770
17.5.4 Inequality as a report card grade for a market economy 772
17.5.5 The relationship between economic equality and social justice 773

17.6 Poverty 775
17.6.1 Defining poverty 775
17.6.2 Poverty throughout the world 776
17.6.3 Growth may not reduce poverty 778

17.7 Further Thoughts on Poverty and Income Equality 779

Appendix 17.1: Inequality of Lifetime Per Capita Income 781

CHAPTER 18 Policies for Sustainable Economic Development 785

18.1 The Urgent But Difficult Case for Environmental Policies 788
18.1.1 Dealing with uncertainty: The example of global warming 789
18.1.2 The costs of controlling global warming 791
18.1.3 The other example: Biodiversity 793
18.1.4 The momentum of our current path 794

18.2 Environmental Policy 796
18.2.1 Environmental costs and economic growth 797
18.2.2 The available policy tools 799
18.2.3 Taxes versus quantitative restrictions 800
18.2.4 The political economy of environmental policy 803

18.3 Cases of Environmental Policy Failures 806
18.3.1 Hoy No Circula: A case of policy failure 806
18.3.2 Clean coal technology 809
18.3.3 Carbon offsets 811
18.3.4 Species losses and international policy 814
18.3.5 The Jevons effect 815
18.3.6 Subsidies for research versus energy taxes 816

18.4 What Technologies Do We Need for Sustainability? 817
18.4.1 Sustainability in all three spheres and economic interests 817
18.4.2 The rights of nature 820
18.4.3 Changing the culture of consumption 822
18.4.4 How to change the culture of growth 824
