Econometrics in the Information Age:
Theory and Practice of Measurement – Vol. 5

Series Editors: Lawrence Klein & Kanta Marwah

ECONOMETRIC MODELING OF JAPAN AND ASIA-PACIFIC ECONOMIES

Editor
Soshichi Kinoshita
Nagoya University, Japan
Contents

Preface v

Introduction: A Short Survey of Linked Econometric Models in Japan xiii

1 Internationally Linked Econometric Models in the Late 1970s xiii

2 Development of Linked Models in the 1990s and Later xvi

References xxi

Chapter 1. The Changing Pattern of International Specialization and Economic Interdependence Among Asia-Pacific, the US and EC Economies 1

Soshichi Kinoshita and Jiro Nemoto

1 Introduction 1

2 Changing Pattern of International Specialization 3

2.1 A measure of comparative advantage 3

2.2 Share of exports 4

2.3 Comparative advantage and disadvantage 5

2.4 A product life-cycle pattern of comparative advantage 6

3 Modeling the Interdependence Through Trade Among Countries 10

3.1 A small macro model 10

3.2 Trade linkage model 12

3.3 Simulation with the model 12
Contents

4 Concluding Remarks ..................................... 16
References ....................................................... 16
Appendix: Structure of a Small linked Model ................. 17

Chapter 2. Structure and Application of a World Industry and Trade Model
Soshichi Kinoshita

1 Introduction .................................................. 25
2 Construction of a World Industry and Trade Model ........ 26
3 Structure of the Model ...................................... 27
  3.1 Structural features of multi-sectoral model .......... 28
  3.2 Structure of trade linkage model .................. 35
4 Simulation Analyses with the Linked System .............. 42
5 Concluding Remarks ....................................... 59
References ....................................................... 59
Appendix: Structure of a World Industry and Trade Model .. 59

Chapter 3. The Impacts of Robotization on Macro and Sectoral Economies within a World Econometric Model
Soshichi Kinoshita and Mitsuo Yamada

1 Introduction .................................................. 67
2 Overview of the World Industry and Trade Model ........ 68
3 International Interdependence Through Commodity Trade ................................................. 70
4 Diffusion Process of the Impacts of Robotization in the Model ............................................ 74
5 Assumption on the Demand-Supply Effect of Robotization .................................................. 75
6 Simulation Results on Robotization in Japan, the US, and Korea ........................................... 77
  6.1 The case of robotization in Japan ...................... 79
  6.2 The case of robotization in the US ................... 82
  6.3 The case of robotization in Korea ................... 89
6.4 A Comparison of the impacts of robotization in Japan and the US on Korea ........................................... 91
7 Concluding Remarks .................................................. 94
References .................................................................. 95

Chapter 4. Japanese Overseas Production within the Asia International Input-Output Model: Japan, the US, and Asia
Mitsuo Tamada

1 Introduction .................................................................. 97
2 Theoretical Framework .................................................. 99
3 Database for the Input-Output Model .............................. 100
4 Some Simulation Results ............................................... 104
   4.1 The induced production of one unit increase in final demand ............................................................... 106
   4.2 Contribution in terms of the induced value added ................................................................................. 108
   4.3 The induced production effect versus the substitution effect of overseas production ............... 110
5 Concluding Remarks .................................................... 114
References .................................................................. 115

Chapter 5. Econometric Evaluation of the Fiscal Expansion and Stimulus Packages in Three Asian Countries and the United States
Taiyo Ozaki

1 Introduction .................................................................. 117
2 Model and Specifications ................................................. 119
3 Testing the Model ......................................................... 128
4 Simulation and Results ................................................ 130
References .................................................................. 145
Appendix A: List of the Principal Equations of the Model .......................................................... 146
Appendix B: List of Variables .......................................... 153

Mitsuo Yamada

1 Introduction ............................................. 167
2 Outline and Performance of the Model .................. 171
  2.1 Structure of the model ............................... 172
3 Baseline Prediction ....................................... 180
  3.1 The assumptions made for the prediction .......... 180
  3.2 Characteristics of the baseline ...................... 182
4 Scenario Analyses ....................................... 188
  4.1 The natural gas pipeline project .................. 190
  4.2 Construction of natural gas thermal power plants .. 193
  4.3 Comparison of CO₂ emissions and associated costs .. 196
5 Concluding Remarks .................................... 201
References .................................................. 202
