## CHAPTER 1 Improvement of Quality

1.1 Introduction .......................... 1
1.2 Building Knowledge and the Scientific Method .................. 2
1.3 Defining Quality ..................... 4
1.4 Model for Improvement ................ 9
1.5 Sequential Experimentation Using the PDSA Cycle ............ 19
1.6 Summary ................................ 21

References ............................... 22
Exercises ................................. 23

## CHAPTER 2 Principles for Design and Analysis of Planned Experiments

2.1 Introduction and Definitions ................ 25
2.2 Types of Planned Experiments ............... 29
2.3 Principles for Designing Analytic Studies .. 34
2.4 Tools for Experimentation .................. 40
2.5 Form for Documentation of a Planned Experiment ........ 51
2.6 Analysis of Data from Analytic Studies ...... 54
2.7 Summary .................................. 58

References ............................... 58
Exercises ................................. 59
CHAPTER 3  Experiments with One Factor .......................... 63

3.1 General Approach to One-Factor Experiments ...................... 64
3.2 Using Run Charts for a One-Factor Design ......................... 68
3.3 Using Shewhart Charts for One-Factor Experiments ................ 76
3.4 Paired-Comparison Experiments ................................ 79
3.5 Randomized Block Designs .................................... 85
3.6 Incomplete Block Designs .................................... 95
3.7 Summary .................................................. 103
References .................................................. 104
Exercises .................................................. 104

CHAPTER 4  Experiments with More Than One Factor .................... 109

4.1 Introduction to Factorial Designs ................................ 111
4.2 Design of Factorial Experiments ................................ 136
4.3 Advanced Topics in the Analysis of Factorial Experiments .... 142
4.4 Summary .................................................. 156
References .................................................. 156
Exercises .................................................. 156

CHAPTER 5  Reducing the Size of Experiments .............................. 161

5.1 Introduction to Fractional Factorial Designs ........................ 163
5.2 Fractional Factorial Designs—Moderate Current Knowledge .... 170
5.3 Fractional Factorial Designs—Low Current Knowledge ........ 183
5.4 Using Blocking to Design a Sequence of Experiments .......... 192
5.5 Summary .................................................. 202
Appendix: Development of Other Blocking Arrangements .......... 204
CHAPTER 6 Evaluating Sources of Variation .......................... 211
6.1 Applications of Nested Designs ......................... 213
6.2 Planning and Analyzing an Experiment
with Nested Factors ........................................ 221
6.3 More Complex Nested Designs .......................... 227
6.4 Summary .................................................. 238
Appendix 6A: Calculation of Variance
Components .................................................. 238
Appendix 6B: Calculating and Combining
Statistics (X, S, or R) ....................................... 244
References .................................................. 245
Exercises .................................................... 245

CHAPTER 7 Sequential Experimentation—A Case Study .......... 251
7.1 Improving a Milling Process—Getting
Started ....................................................... 251
7.2 The First Improvement Cycle: Current
Performance of the Mills .................................. 255
7.3 The Second PDSA Cycle: Sources
of Variation .................................................. 261
7.4 The Third PDSA Cycle: Evaluating Mill
Cutter Vendors .............................................. 263
7.5 The Fourth PDSA Cycle: Screening Process
Variables .................................................... 265
7.6 The Fifth PDSA Cycle: Evaluate Effect of
Improvements on the Mill Process ....................... 269
7.7 The Sixth PDSA Cycle: Evaluating
Important Factors .......................................... 270
7.8 The Seventh PDSA Cycle: Determining
Optimum Levels ............................................ 275
7.9 The Eighth PDSA Cycle: Confirmation
of Improvements ........................................... 277
7.10 Final Actions of the Mill Improvement Team ............................... 277
Exercises .................................. 280

CHAPTER 8 Using a Time Series Response Variable .................. 281
8.1 Incorporating Experimental Patterns in a Time Series ......... 281
8.2 Shewhart Charts ........................................ 286
8.3 Designs for Sequential Experimentation Using Time Series Response Variables ................ 295
8.4 Summary ................................................. 303
References .............................................. 303
Exercises ............................................... 304

CHAPTER 9 Experiments with Factors at More Than Two Levels .......... 309
9.1 Factorial Designs with More Than Two Levels .................. 309
9.2 Augmenting 2^k Factorial Designs with Center Points .......... 316
9.3 Three-Level Designs for Quantitative Factors .................. 321
9.4 Experiments for Formulations or Mixtures ....................... 326
9.5 Experimental Designs for Complex Systems ....................... 337
9.6 Summary .................................................. 341
References ............................................... 342
Exercises ............................................... 342

CHAPTER 10 Applications in Health Care ............................... 345
10.1 Introduction ............................................. 346
10.2 Applications ........................................... 350
10.3 Summary ................................................. 365
References ............................................... 366
Exercises ............................................... 367
