Contents

1. Methodology: Introduction to Wavelet Analysis 1

1.1 Introduction ........................................ 1

1.2 Fourier Analysis and Spectral Analysis .............. 2
1.2.1 Fourier analysis ................................. 2
1.2.2 Spectral analysis .................................. 5
1.2.3 Comparison between Fourier transform
and wavelet transform ................................. 9

1.3 Wavelet Analysis .................................... 11
1.3.1 Continuous wavelet transform .................... 11
1.3.2 Discrete wavelet transform ....................... 14
1.3.3 Maximal overlap discrete wavelet transform .... 24
1.3.4 Boundary condition ............................... 27

1.4 Wavelet Variance, Covariance and Correlation ....... 29
1.4.1 Wavelet variance .................................. 29
1.4.2 Wavelet covariance and correlation .............. 32
1.4.3 Cross wavelet covariance and correlation ....... 35

1.5 Long Memory Estimation Using Wavelet Analysis .... 36
1.5.1 Definitions of long memory ....................... 36
1.5.2 Wavelet ordinary least square ................... 37
1.5.3 Approximate maximum-likelihood estimation
of the long memory parameter ....................... 37
1.5.4 Another estimation method of the long
memory parameter ................................. 38
2. Multiscale Hedge Ratio Between the Stock and Futures Markets: A New Approach Using Wavelet Analysis and High Frequency Data
   2.1 Introduction ........................................ 41
   2.2 Minimum Variance Hedge .......................... 44
   2.3 Empirical Results .................................. 46
   2.4 Concluding Remarks ............................... 53

3. Modeling the International Links Between the Dollar, Euro and Yen Interest Rate Swap Markets Through a Multiscaling Approach
   3.1 Introduction ........................................ 57
   3.2 Data and Descriptive Statistics ............... 60
   3.3 Empirical Results ................................ 62
   3.4 Concluding Remarks ............................... 73

4. Long Memory in Rates and Volatilities of LIBOR: Wavelet Analysis
   4.1 Introduction ........................................ 75
   4.2 Data and Empirical Results ..................... 78
   4.3 Summary and Concluding Remarks ............... 84

   5.1 Introduction ........................................ 87
   5.2 Data Description and Basic Statistics .......... 92
   5.3 Empirical Results ................................ 98
   5.4 Concluding Remarks ............................... 103

6. On the Relationship Between Stock Returns and Risk Factors: New Evidence From Wavelet Analysis
   6.1 Introduction ........................................ 105
   6.2 Data and Basic Statistics ....................... 108
   6.3 Empirical Results ................................ 110
   6.3.1 Results from the traditional CAPM ......... 111
   6.3.2 Results using two risk factors: Excess market returns and SMB .......................... 115
10.2.2 The bootstrap approach .................................. 180
10.3 Data and Empirical Results ................................. 181
  10.3.1 Estimation results for the three aggregate groups 183
  10.3.2 Estimation results for individual mutual funds .... 186
10.4 Summary and Concluding Remarks ........................ 190

References .................................................................. 191
