Financial Risk Modelling and Portfolio Optimization with R

Bernhard Pfaff

Invesco Global Strategies, Germany
Contents

Preface xi

List of abbreviations xiii

Part I MOTIVATION 1

1 Introduction 3
Reference 5

2 A brief course in R 6
2.1 Origin and development 6
2.2 Getting help 7
2.3 Working with R 10
2.4 Classes, methods and functions 12
2.5 The accompanying package FRAPO 20
References 25

3 Financial market data 26
3.1 Stylized facts on financial market returns 26
3.1.1 Stylized facts for univariate series 26
3.1.2 Stylized facts for multivariate series 29
3.2 Implications for risk models 32
References 33

4 Measuring risks 34
4.1 Introduction 34
4.2 Synopsis of risk measures 34
4.3 Portfolio risk concepts 39
References 41

5 Modern portfolio theory 43
5.1 Introduction 43
5.2 Markowitz portfolios 43
5.3 Empirical mean–variance portfolios 47
References 49

Part II  RISK MODELLING 51

6 Suitable distributions for returns 53
6.1 Preliminaries 53
6.2 The generalized hyperbolic distribution 53
6.3 The generalized lambda distribution 56
6.4 Synopsis of R packages for the GHD 62
   6.4.1 The package fBasics 62
   6.4.2 The package GeneralizedHyperbolic 63
   6.4.3 The package ghyp 64
   6.4.4 The package QRM 65
   6.4.5 The package SkewHyperbolic 66
   6.4.6 The package VarianceGamma 67
6.5 Synopsis of R packages for GLD 67
   6.5.1 The package Davies 67
   6.5.2 The package fBasics 67
   6.5.3 The package gld 68
   6.5.4 The package lmomco 69
6.6 Applications of the GHD to risk modelling 69
   6.6.1 Fitting stock returns to the GHD 69
   6.6.2 Risk assessment with the GHD 73
   6.6.3 Stylized facts revisited 75
6.7 Applications of the GLD to risk modelling and data analysis 78
   6.7.1 VaR for a single stock 78
   6.7.2 Shape triangle for FTSE 100 constituents 79
References 82

7 Extreme value theory 84
7.1 Preliminaries 84
7.2 Extreme value methods and models 85
   7.2.1 The block maxima approach 85
   7.2.2 rth largest order models 86
   7.2.3 The peaks-over-threshold approach 87
7.3 Synopsis of R packages 89
   7.3.1 The package evd 89
   7.3.2 The package evdbayes 90
   7.3.3 The package evir 91

References
7.3.4 The package fExtremes 93
7.3.5 The packages ismev and extRemes 95
7.3.6 The package POT 96
7.3.7 The package QRM 97
7.3.8 The package Renext 97
7.4 Empirical applications of EVT 98
  7.4.1 Section outline 98
  7.4.2 Block maxima model for Siemens 99
  7.4.3 r block maxima model for BMW 101
  7.4.4 POT method for Boeing 105
References 110

8 Modelling volatility 112
  8.1 Preliminaries 112
  8.2 The class of ARCH models 112
  8.3 Synopsis of R packages 116
    8.3.1 The package bayesGARCH 116
    8.3.2 The package ccgarch 117
    8.3.3 The package fGarch 118
    8.3.4 The package gogarch 118
    8.3.5 The packages rugarch and rmgarch 120
    8.3.6 The package tseries 122
  8.4 Empirical application of volatility models 123
References 125

9 Modelling dependence 127
  9.1 Overview 127
  9.2 Correlation, dependence and distributions 127
  9.3 Copulae 130
    9.3.1 Motivation 130
    9.3.2 Correlations and dependence revisited 131
    9.3.3 Classification of copulae 133
  9.4 Synopsis of R packages 136
    9.4.1 The package BLCOP 136
    9.4.2 The packages copula and nacopula 138
    9.4.3 The package fCopulae 140
    9.4.4 The package gumbel 141
    9.4.5 The package QRM 142
  9.5 Empirical applications of copulae 142
    9.5.1 GARCH–copula model 142
    9.5.2 Mixed copula approaches 149
References 151
Part III  PORTFOLIO OPTIMIZATION APPROACHES  153

10  Robust portfolio optimization  155
   10.1  Overview  155
   10.2  Robust statistics  156
      10.2.1  Motivation  156
      10.2.2  Selected robust estimators  157
   10.3  Robust optimization  160
      10.3.1  Motivation  160
      10.3.2  Uncertainty sets and problem formulation  160
   10.4  Synopsis of R packages  166
      10.4.1  The package covRobust  166
      10.4.2  The package fPortfolio  166
      10.4.3  The package MASS  167
      10.4.4  The package robustbase  168
      10.4.5  The package robust  168
      10.4.6  The package rrcov  169
      10.4.7  The package Rsocp  170
   10.5  Empirical applications  171
      10.5.1  Portfolio simulation: Robust versus classical statistics  171
      10.5.2  Portfolio back-test: Robust versus classical statistics  177
      10.5.3  Portfolio back-test: Robust optimization  182

References  187

11  Diversification reconsidered  189
   11.1  Introduction  189
   11.2  Most diversified portfolio  190
   11.3  Risk contribution constrained portfolios  192
   11.4  Optimal tail-dependent portfolios  195
   11.5  Synopsis of R packages  197
      11.5.1  The packages DEoptim and RcppDE  197
      11.5.2  The package FRAPO  199
      11.5.3  The package PortfolioAnalytics  201
   11.6  Empirical applications  201
      11.6.1  Comparison of approaches  201
      11.6.2  Optimal tail-dependent portfolio against benchmark  206
      11.6.3  Limiting contributions to expected shortfall  211

References  215

12  Risk-optimal portfolios  217
   12.1  Overview  217
   12.2  Mean–VaR portfolios  218
   12.3  Optimal CVaR portfolios  223
   12.4  Optimal draw-down portfolios  227
12.5 Synopsis of R packages
12.5.1 The package fPortfolio  
12.5.2 The package FRAPO 
12.5.3 Packages for linear programming 
12.5.4 The package PerformanceAnalytics 

12.6 Empirical applications
12.6.1 Minimum-CVaR versus minimum-variance portfolios 
12.6.2 Draw-down constrained portfolios 
12.6.3 Back-test comparison for stock portfolio 

References

13 Tactical asset allocation
13.1 Overview
13.2 Survey of selected time series models
13.2.1 Univariate time series models
13.2.2 Multivariate time series models
13.3 Black–Litterman approach
13.4 Copula opinion and entropy pooling
13.4.1 Introduction
13.4.2 The COP model
13.4.3 The EP model
13.5 Synopsis of R packages
13.5.1 The package BLCOP
13.5.2 The package dse
13.5.3 The package fArma
13.5.4 The package forecast
13.5.5 The package MSBVAR
13.5.6 The package PairTrading
13.5.7 The packages urca and vars
13.6 Empirical applications
13.6.1 Black–Litterman portfolio optimization
13.6.2 Copula opinion pooling
13.6.3 Protection strategies

References

Appendix A Package overview
A.1 Packages in alphabetical order
A.2 Packages ordered by topic

References

Appendix B Time series data
B.1 Date-time classes
B.2 The ts class in the base package stats
B.3 Irregular-spaced time series
CONTENTS

B.4 The package timeSeries 330
B.5 The package zoo 332
B.6 The packages tframe and xts 334
References 337

Appendix C Back-testing and reporting of portfolio strategies 338
C.1 R packages for back-testing 338
C.2 R facilities for reporting 339
C.3 Interfacing databases 339
