Abstract iv

List of Tables x

List of Figures xii

Acknowledgements xiv

1 Simulation Methods for Lévy-driven CARMA Stochastic Volatility Models 1
  1.1 Introduction ...................................................... 1
  1.2 Lévy processes ....................................................... 3
  1.3 Series Representation of Lévy Processes and Their Simulation ........... 5
    1.3.1 General Theory ................................................. 5
    1.3.2 Mixture of Gammas .............................................. 8
    1.3.3 A Bivariate Mixture of Gammas ............................. 9
  1.4 Lévy driven Stochastic Volatility Models .................................. 12
    1.4.1 The Generic Stochastic Volatility Model .................... 12
    1.4.2 CARMA Stochastic Volatility Model Driven by a Mixture of Gammas 15
  1.5 Examples ............................................................ 20
    1.5.1 Simulating from Lévy driven CARMA Models ................. 21
    1.5.2 Discussion of the examples ................................. 23
  1.6 Conclusion .........
3.6.2 Model Specification ........................................... 98
3.6.3 Estimation Results ........................................... 101
3.7 Conclusion ..................................................... 106
3.8 Tables and Figures ............................................ 107

4 Variance Risk Premium Dynamics ................................. 121

4.1 Introduction .................................................... 121
4.2 Dynamics under the Physical Measure ....................... 127
  4.2.1 The Stochastic Volatility Model ................... 127
  4.2.2 Model Characteristics .................................. 131
  4.2.3 Moments of the Return Process ................... 137
4.3 Realized Power Variation Based Inference ..................... 138
4.4 Selection of the Model under the Physical Measure .......... 145
  4.4.1 High-Frequency Data and Initial Data Analysis ...... 145
  4.4.2 Model Selection .......................................... 146
4.5 Initial Analysis of the Variance Risk Premium ................ 156
  4.5.1 Variance Risk Premium Measure and Its Properties .... 156
  4.5.2 VIX Index .................................................. 161
  4.5.3 Initial Analysis of the Variance Risk Premium ....... 164
4.6 Modeling and Inference for Time-Varying Variance Risk Premium 166
  4.6.1 Prices of Risk and Change of Measure ................. 167
  4.6.2 Inference for Time-Varying Variance Risk Premium .... 175
4.7 Conclusion ..................................................... 182
4.8 Tables and Figures ............................................ 184

Appendices .......................................................... 197
A Proofs of the results in Chapter 1

B Proofs of the results in Chapter 2
   B.1 Preliminary Estimates for Integrated Variance
   B.2 Moments of Jump-Diffusion JDSV Model
   B.3 Moments of the Pure-Jump JDSV Model
   B.4 Moments of Power Variation Statistics for the JDSV Models with CARMA(2,1) kernel
   B.5 Moments of the Affine Jump-Diffusion Model

C Proofs of the results in Chapter 3
   C.1 Notation and some preliminary estimates
   C.2 Lemma 2
   C.3 Lemma 3
   C.4 Proof of Theorem 6
   C.5 Proof of Corollary 1
   C.6 Details on the Monte Carlo Study in Section 3.5

D Proofs of the results in Chapter 4
   D.1 Proof of Theorem 5
   D.2 Calculation of $P(IV_a(t)|\mathcal{F}_t)$ for the Jump Diffusive Volatility SV model (4.29)-(4.32)
   D.3 Equivalent Martingale Measures
      D.3.1 Proof for the Diffusive Risk Price $\psi_1(t)$
      D.3.2 Proof for the Jump Price of Risk $Y(\omega,t,x)$
