Introduction .................................................................................................................. 17

1. The boundaries between work and employment
   1.1. Work is not synonymous with employment ....................................................... 21
   1.2. Distribution of work in the global economy .................................................... 22
   1.3. Ideology and Statistics: the contribution of Labour Force Surveys to making work invisible ......................................................... 30
   1.4. The heterogeneous geographical distribution of work .................................... 33
   1.5. Non-remunerated work .................................................................................... 37
       1.5.1. The legal treatment of non-remunerated work ......................................... 37
       1.5.2. Non-remunerated work in households ...................................................... 40
       1.5.3. Volunteer work ....................................................................................... 41
       1.5.4. Forced labour ......................................................................................... 42
   1.6. The transitions between remunerated and non-remunerated work ................. 43
       1.6.1. The longitudinal and transversal perspective ............................................ 43
       1.6.2. Leaving employment and being inactive .................................................... 45
       1.6.3. The good employment pyramid, 2009-2011 ............................................. 51
   1.7. Invisible work, unmeasured and concealed ...................................................... 54
       1.7.1. The growth of casual labour in the world .................................................. 54
       1.7.2. The weak flank of the system of national accounts ..................................... 56
       1.7.3. Methodological difficulties and political dissent in the estimation of the non-observed economy. The proposals of the United Nations Economic Commission for Europe ................................................................. 61
       1.7.4. Some national estimates of the NOE ......................................................... 66
   1.8. The quality of work: a comparison between remunerated and non-remunerated work ........................................................................................................ 74
1.9. A “decent job” for all? ........................................................................................................... 82
1.10. The unions and the representation of the workers
of the future ................................................................................................................................. 85
1.10.1. New workers with multiple obligations ........................................................................... 85
1.10.2. Foreseeable changes in the agenda of union organisations ........................................ 86

2. The hidden giant

2.1. Two thousand million workshops producing services
round the clock at the margin of the market .................................................................................. 91

2.2. The family structure of households ....................................................................................... 92
2.2.1. New types of household ..................................................................................................... 92
2.2.2. The network of users of non-remunerated work:
cohabiters, close family, and extended family ............................................................................ 96
2.2.3. The tax delimitation of the family ..................................................................................... 104

2.3. Non-remunerated workplaces ............................................................................................... 106
2.3.1. Accommodation and dwellings ......................................................................................... 106
2.3.2. Overcrowded households and empty dwellings ................................................................ 111
2.3.3. The means of gaining access to housing .......................................................................... 113
2.3.4. Provision of infrastructure and technology in the home.
Its effect on unpaid domestic work ............................................................................................. 116

3. The opaque nature of non-remunerated work and
households in the systems of national accounts

3.1. Who cares about GDP? .......................................................................................................... 121
3.1.1. The hype of GDP and the mirage of growth .................................................................... 121
3.1.2. Development and structure of GDP.
An international view .................................................................................................................. 126
3.1.3. The Stiglitz-Sen-Fitoussi Report .................................................................................... 135
3.1.4. An illustration: non-remunerated work and households
in the Spanish National Accounts ................................................................................................. 137

3.2. The barriers between households and the market .................................................................. 150
3.2.1. The source of household income .................................................................................... 150
3.2.2. The capacity of households to acquire merchandise ......................................................... 154
3.2.3. The poverty threshold: multi-dimensional indicators ....................................................... 156
3.2.4. Protection of the family against poverty ......................................................................... 160
3.2.5. Non-monetary resources ................................................................................................. 163
3.2.6. Households at risk of poverty in Spain. The WI Index .................................................. 166
3.2.7. The paradox of the services market: those who most need them cannot afford them .................................. 170

3.3. The limits of the market on absorbing remunerated work ................................................................. 177

3.3.1. The age and health limits of potential workers ............................................................................. 177
3.3.2. The market as a reducer of employment and the analogy of the android ...................................... 178

3.4. The role of the State as intermediary: from households to the Treasury and vice versa .................. 180

3.5. Non-remunerated work and families in the economic crisis in Spain, 2007-2011 .................................. 184

3.5.1. Other families, other crises ........................................................................................................... 184
3.5.2. Denos and the concept of unemployment ....................................................................................... 186
3.5.3. Households from the standpoint of the Bank of Spain .................................................................. 188
3.5.4. Material wealth and household debt ............................................................................................. 194
3.5.5. Household savings and their contribution to capital formation .................................................... 199
3.5.6. When will we come to the end of the crisis? Its impact upon the formation and break-up of households .................................................. 201

4. The content of non-remunerated work

4.1. Freedom, necessity, and coercion in non-remunerated work ............................................................. 203

4.2. The selection of the units of analysis: work, workers, households ....................................................... 207

4.3. Recipients and consumers of non-remunerated work ....................................................................... 209

4.4. The contribution of Time Use Surveys to our knowledge of the basic tasks in the home .................. 212

4.5. The preparation of food ....................................................................................................................... 216

4.6. Is pregnancy work? International variations in the ideal number of children .................................. 219

4.7. Childcare ............................................................................................................................................ 225

4.7.1. New models of maternity .............................................................................................................. 225
4.7.2. The accounting fiction of investment in education ........................................................................ 232

4.8. Care of the sick and the disabled ........................................................................................................ 235

4.8.1. The level of health in the population ........................................................................................... 235
4.8.2. Levels of health in Spain and the scales of demand for cares ......................................................... 237
4.8.3. The graphic expression of the decline: survival curves and correlative demand for care ............... 243
4.8.4. Non-remunerated carers of the sick: differences on gender, age, and socio-economic status 246

4.9. The care of dependent elderly people 249

4.9.1. The loss of autonomy as a consequence of the aging process 249

4.9.2. The excessive load of carers: the application of the Spanish dependency law 256

4.9.3. The gap between supply and demand: the unmet demand of the sick and the elderly 260

4.9.4. Preferred options for the location of parents in the event of dependence 261

4.9.5. Personal expectations in the event of one's own dependence 266

4.10. The work of death and remembrance 268

5. The search for equivalents to the value of non-remunerated work 273

5.1. The cost of work in the labour market 273

5.1.1. Payroll cost, employment cost, and other labour costs 273

5.1.2. The frontier of the minimum wage 276

5.1.3. Territorial differences between wages 277

5.1.4. Real cost and remembered wage 279

5.1.5. The length of the working day and its effect on the cost of work 281

5.1.6. Work compensation in sectors similar to non-remunerated work 281

5.2. The basic substitution cost, according to the Time Use Survey (CSIC 2009) 283

5.2.1. The cost of paid care for children 283

5.2.2. The cost of remunerated care for dependent elderly people 285

5.2.3. The cost of remunerated care in non-subsidised care homes 287

5.2.4. The remuneration of immigrant carers 288

5.3. The opportunity cost of being out of the labour market 291

5.3.1. The estimation of income lost by carers. Taxation sources 291
5.3.2. The estimation of income lost by carers, using data from the Living Conditions Survey 296
5.3.3. The loss of other financial and social rights 299
5.4. The displacement of non-remunerated work to those excluded from the labour market 300
5.5. Satellite accounts: a necessary bridge between heterogeneous economic systems 305

6. Import/export: the migration of remunerated work
6.1. Between fine words and the measurement of migratory flows 309
6.1.1. The Universal Declaration of Human Rights 309
6.1.2. Migratory flows, balances, and stocks 312
6.1.3. Desires and expectations in emigration. The Gallup Report 2009 317
6.2. The restructuring of remunerated and non-remunerated work as a consequence of migration 320
6.2.1. Depopulated segments and the change in age and gender ratios in the source areas 320
6.2.2. The restructuring of employment and non-remunerated work in the places of arrival 323
6.3. An illustration: migration and remittances in Spain 324
6.3.1. The source of migrants and their geographical location in the country 324
6.3.2. Causes, reasons, and political discourse on migration 330
6.3.3. The evolution of public opinion: access to the labour market and to public services 333
6.3.4. Occupational mobility of immigrants 337
6.3.5. Family networks, non-remunerated work, and the flow of transfers to their places of origin 343

7. Contracting substitute work in the home
7.1. The theoretical and political interest of paid domestic work. From expansionary contracting to substitute contracting 361
7.2. The reduction of the work in the household and its transfer to the State and to the market 365
7.3. Inequality between countries, inequality between households, and inequality between workers 368
7.4. The proposals of the International Labour Organisation on remunerated domestic work .................................................. 372
7.5. Negotiation on multiple fronts. The point of view of the associations of domestic workers and the impact of the Law on Dependents in Spain .................................................................. 378
7.6. The viewpoint of the labour market ................................................................................................................................. 386
  7.6.1. The entry point to the labour market through a volatile sector .................................................................................. 386
  7.6.2. High volume of employment, part time working, undeclared employment, and low contributions to the Social Security .................................................................................................................. 392
  7.6.3. Type of working hours and overtime hours, according to the LFS ........................................................................ 395
  7.6.4. Effect of the lack of unemployment cover on domestic workers .................................................................................. 398
  7.6.5. Wages: contribution bases and market prices .................................................................................................................. 399
  7.6.6. Internationalisation and occupational mobility in remunerated work in households .................................................. 403
  7.6.7. Jobs wanted in order to change sector as a sign of discontent ....................................................................................... 405
7.7. Paid care services inaccessible to medium and low income families .................................................................................. 409
  7.7.1. Private hiring of care services ........................................................................................................................................ 409
  7.7.2. How much money are households prepared to spend on care? .................................................................................. 416

8. Who will take care of dependents in the global economy?
  8.1. The concept of dependence and the construction of scales ................................................................................................. 423
    8.1.1. Population ratios ...................................................................................................................................................... 423
    8.1.2. Scales of demand for care ........................................................................................................................................ 426
  8.2. The prediction of the worldwide demand for care .................................................................................................................. 442
    8.2.1. The future demand for care in Europe ...................................................................................................................... 442
    8.2.2. The future demand for care in Spain ....................................................................................................................... 445
    8.2.3. The future demand for care in Africa ....................................................................................................................... 446
    8.2.4. The future demand for care in Asia ......................................................................................................................... 449
    8.2.5. The future demand for care in Japan ....................................................................................................................... 454
    8.2.6. The future demand for care in China ....................................................................................................................... 456
    8.2.7. The future demand for care in India ....................................................................................................................... 459
8.2.8. The future demand for care in Latin America and the Caribbean ................................................................. 460
8.2.9. The future demand for care in the United States and Canada ............................................................... 462
8.2.10. The future demand for care in Oceania ........................................ 466
8.2.11. Variations in the future demand for care in the more developed and the least developed countries ........ 466
8.3. The unsustainability of the traditional models of distribution of the care load ............................................................... 469
8.3.1. Theoretical and regulatory proposals about new ways to distribute care ............................................................... 473
