1 Introduction 1

2 Deterministic Dynamical Systems and Stochastic Perturbations 7

2.1 Chapter overview 7

2.2 Deterministic dynamical systems 7

2.2.1 Ergodicity and Birkhoff individual ergodic theorem 9

2.2.2 Stationary (invariant) measures and the Frobenius–Perron operator for deterministic dynamical systems 10

2.3 Stochastic perturbations of deterministic dynamical systems 18

2.3.1 Stochastic perturbations of deterministic systems and invariant measures 19

2.3.2 A family of stochastic perturbations and invariant measures 22

2.3.3 Matrix representation of $P_N$ 23

2.3.4 Stability and convergence 26

2.3.5 Examples 28

References 33

3 Random Dynamical Systems and Random Maps 35

3.1 Chapter overview 35

3.2 Random dynamical systems 35

3.3 Skew products 36

3.4 Random maps: Special structures of random dynamical systems 37

3.4.1 Random maps with constant probabilities 38

3.4.2 The Frobenius–Perron operator for random maps with constant probabilities 39

3.4.3 Properties of the Frobenius–Perron operator 39

3.4.4 Representation of the Frobenius–Perron operator 41

3.4.5 Existence of invariant measures for random maps with constant probabilities 43
3.4.6 Random maps of piecewise linear Markov transformations and the Frobenius–Perron operator 44

3.5 Necessary and sufficient conditions for the existence of invariant measures for a general class of random maps with constant probabilities 46

3.6 Support of invariant densities for random maps 53

3.7 Smoothness of density functions for random maps 62

3.8 Applications in finance 71

3.8.1 One period binomial model for stock option 73

3.8.2 The classical binomial interest rate models and bond prices 76

3.8.3 Random maps with constant probabilities as useful alternative models for classical binomial models 79

References 81

4 Position Dependent Random Maps 85

4.1 Chapter overview 85

4.2 Random maps with position dependent probabilities 86

4.2.1 The Frobenius–Perron operator 86

4.2.2 Properties of the Frobenius–Perron operator 87

4.2.3 Existence of invariant measures for position dependent random maps 89

4.2.3.1 Existence results of Góra and Boyarsky 89

4.2.3.2 Existence results of Bahsoun and Góra 90

4.2.3.3 Necessary and sufficient conditions for the existence of invariant measures for a general class of position dependent random maps 94

4.3 Markov switching position dependent random maps 94

4.4 Higher dimensional Markov switching position dependent random maps 100

4.4.1 Notations and review of some lemmas 100

4.4.2 The existence of absolutely continuous invariant measures of Markov switching position dependent random maps in $\mathbb{R}^n$ 102

4.5 Approximation of invariant measures for position dependent random maps 107

4.5.1 Maximum entropy method for position dependent random maps 108

4.5.1.1 Convergence of the maximum entropy method for random map 112

4.5.2 Invariant measures of position dependent random maps via interpolation 113

4.6 Applications in finance 120

4.6.1 Generalized binomial model for stock prices 121

4.6.2 Call option prices using one period generalized binomial models 121
5 Random Evolutions as Random Dynamical Systems

5.1 Chapter overview
5.2 Multiplicative operator functionals (MOF)
5.3 Random evolutions
5.3.1 Definition and classification of random evolutions
5.3.2 Some examples of RE
5.3.3 Martingale characterization of random evolutions
5.3.4 Analogue of Dynkin's formula for RE
5.3.5 Boundary value problems for RE
5.4 Limit theorems for random evolutions
5.4.1 Weak convergence of random evolutions
5.4.2 Averaging of random evolutions
5.4.3 Diffusion approximation of random evolutions
5.4.4 Averaging of random evolutions in reducible phase space, merged random evolutions
5.4.5 Diffusion approximation of random evolutions in reducible phase space
5.4.6 Normal deviations of random evolutions
5.4.7 Rates of convergence in the limit theorems for RE

6 Averaging of the Geometric Markov Renewal Processes (GMRP)

6.1 Chapter overview
6.2 Introduction
6.3 Markov renewal processes and semi-Markov processes
6.4 The geometric Markov renewal processes (GMRP)
6.4.1 Jump semi-Markov random evolutions
6.4.2 Infinitesimal operators of the GMRP
6.4.3 Martingale property of the GMRP
6.5 Averaged geometric Markov renewal processes
6.5.1 Ergodic geometric Markov renewal processes
6.5.1.1 Average scheme
6.5.1.2 Martingale problem for the limit process \( \hat{S}_t \) in average scheme
6.5.1.3 Weak convergence of the processes \( S^T_t \) in an average scheme
6.5.1.4 Characterization of the limiting measure \( Q \) for \( Q_T \) as \( T \rightarrow \infty \)

8 Normal Deviation of a Security Market by the GMRP

8.1 Chapter overview
8.2 Normal deviations of the geometric Markov renewal processes
  8.2.1 Ergodic normal deviations
  8.2.2 Reducible (merged) normal deviations
  8.2.3 Normal deviations under double averaging
8.3 Applications
  8.3.1 Example of two state ergodic normal deviated GMRP
  8.3.2 Example of merged normal deviations in 2 classes
8.4 European call option pricing formula for normal deviated GMRP
  8.4.1 Ergodic GMRP
  8.4.2 Double averaged normal deviated GMRP
  8.4.3 Call option pricing for ergodic GMRP
  8.4.4 Call option pricing formulas for double averaged GMRP
8.5 Martingale property of GMRP
8.6 Option pricing formulas for stock price modelled by GMRP
8.7 Examples of option pricing formulas modelled by GMRP
  8.7.1 Example of two states in discrete time
  8.7.2 Generalized example in continuous time in Poisson case

References

9 Poisson Approximation of a Security Market by the Geometric Markov Renewal Processes

9.1 Chapter overview
9.2 Averaging in Poisson scheme
9.3 Option pricing formula under Poisson scheme
9.4 Application of Poisson approximation with a finite number of jump values
  9.4.1 Applications in finance
    9.4.1.1 Risk neutral measure
    9.4.1.2 On market incompleteness
  9.4.2 Example
