Konstantin Gebert

Performance Control in Buyer-Supplier Relationships

The Design and Use of Formal Management Control Systems

Springer Gabler
PART I
Need for research & theoretical framework

1. Practical relevance
   1.1. Background and relevance from a managerial perspective
   1.2. Research objectives and practical contribution of the research project
   1.3. Thesis outline

2. Theoretical relevance
   2.1. Relevant research fields
   2.2. State of research and research gaps
   2.3. Research questions and scientific contribution of the research project

3. Research framework and research subjects
   3.1. Constituent attributes of buyer-supplier relationships
   3.2. Buyer-supplier relationships in the context of supply chains
   3.3. Perspectives in buyer-supplier relationships
   3.4. Performance of buyer-supplier relationships
   3.5. Summary and development of an integrated framework for research
   3.6. Research subjects

4. Research design and positioning of research
   4.1. Theoretical fundamentals – The three levels of scientific research
   4.2. Theoretical level
   4.3. Methodological level
   4.4. Meta-methodological level
   4.5. Summary and positioning of research within scientific theory
PART II
Theory building & empirical analysis

5. Performance-control in buyer-supplier relationships: Development of a contingency-based framework for analysis

5.1. Current situation and challenges

5.2. Theory development

5.2.1. Performance control in buyer-supplier relationships

5.2.2. Formal management control systems

5.2.3. Identification of research gaps

5.3. Research methodology

5.4. The contingency-based framework for analysis

5.4.1. Classification scheme for relational firm-performance variables

5.4.2. Classification scheme for interface-performance variables

5.4.3. Classification scheme for capability variables

5.4.4. Classification scheme for contingency variables

5.5. First empirical examination of propositions

5.6. Summary 1st phase of analysis

6. Analysis of environmental influences on comparability of reliability, flexibility and inventory efficiency

6.1. Current situation and challenges

6.2. Theory development

6.3. Research methodology

6.4. Model development

6.4.1. Interface-performance in buyer-supplier relationships

6.4.2. Types of buyer-supplier relationships

6.4.3. Market- and production-specific contingencies
6.5. Survey development and sample description .............................................. 128
6.6. Results and discussion of empirical analysis .............................................. 131
  6.6.1. Mean comparison ............................................................................. 131
  6.6.2. Analysis of covariance ................................................................. 133
6.7. Summary 2nd phase of analysis .............................................................. 137

7. Analysis of dyadic control activities’ mediating role in delivery reliability
   and flexibility .......................................................................................... 140
  7.1. Current situation and challenges .......................................................... 140
  7.2. Theory development .......................................................................... 143
    7.2.1. Elements of the research framework ........................................... 144
    7.2.2. Development of the hypothesized model ..................................... 150
  7.3. Research methodology ....................................................................... 154
    7.3.1. Development of the survey instrument ....................................... 155
    7.3.2. Sample description ...................................................................... 157
    7.3.3. Data quality ................................................................................ 160
    7.3.4. Relativization of performance values .......................................... 162
  7.4. Results of measurement and structural equation model ....................... 166
    7.4.1. Measurement model .................................................................... 166
    7.4.2. Structural equation model ........................................................... 170
  7.5. Summary 3rd phase of analysis ............................................................ 174
PART III
Critical appraisal & future research

8. Conclusions, limitations and implications for future research................. 180

  8.1. Basic research results and key findings ......................................... 180
  8.2. Contributions to practice and managerial implications ......................... 183
  8.3. Contributions to research and scientific implications ............................ 184
  8.4. Limitations .................................................................................. 186
  8.5. Recommendations for future research ............................................. 188

References ............................................................................................ 190

References (structured literature review) .................................................. 206

Appendix .............................................................................................. 215
