Jesús R. Artalejo
## Contents

Editorial MCQT'10: computational methods and applications in queueing theory

*J.R. Artalejo*

A discrete-time queueing system with optional LCFS discipline

*I. Atencia and A.V. Pechinker*

A MAP-modulated fluid flow model with multiple vacations

*J.W. Baek, H.W. Lee, S.W. Lee, and S. Ahn*

On minimal representations of Rational Arrival Processes

*P. Buchholz and M. Telek*

A multi-class discrete-time queueing system under the FCFS service discipline

*S. De Clercq, K. Laevens, B. Steyaert, and H. Bruneel*

Queueing model of a hybrid channel with faster link subject to partial and complete failures

*D. Efrosinin*

Analytic approximations of queues with lightly- and heavily-correlated autoregressive service times

*D. Fiems, B. Prabhu, and K. De Turck*

Managing performance and power consumption in a server farm

*I. Mitrani*

Stability analysis of a two-station cascade queueing network

*E. Morozov and B. Steyaert*

A matrix continued fraction approach to multiserver retrial queues

*T. Phung-Duc, H. Masuyama, S. Kasahara, and Y. Takahashi*

Waiting time approximation in multi-class queueing systems with multiple types of class-dependent interruptions

*Ö. S. Ulusçu and T. Altıok*

Dynamic scheduling of a single-server two-class queue with constant retrial policy

*A. Winkler*
Structural properties of the optimal resource allocation policy for single-queue systems

R. Yang, S. Bhulai, and R. van der Mei
