2.3.2 The Technique of Stochastic Dynamic Programming ........... 113
2.3.3 The Buffer-Stock Model ........................................ 116
2.3.4 Liquidity Constrained Consumers ......................... 120
2.3.5 Models Including Habit Formation ......................... 121

Paragraph 2.4 Do the Elaborated Models Perform Better? ........ 125
2.4.1 Gain in Realism at the Cost of Predictive Power .......... 125
2.4.2 Remaining Deficiencies ....................................... 126

Paragraph 2.5 The Optimal Consumption Path –
General Remarks ...................................................... 128
2.5.1 Hidden Assumptions and Fundamental Flaws ............. 128
2.5.2 Arguments of the Utility Function – Wealth as an End
   in Itself ............................................................ 129
2.5.3 A Realistic Time-Horizon ..................................... 131
2.5.4 The Representative Consumer ............................... 132
2.5.5 Per-period Consumption as a Single Entity ............... 138
2.5.6 The Elasticity of Intertemporal Substitution ............... 141
2.5.7 The Optimising Procedure – Benefits and Costs ........ 145

Chapter 3. A New Approach to Saving Behaviour

Paragraph 3.1 Basic Needs and Saving ........................... 151
3.1.1 The Relative-Income Hypothesis ............................ 151
3.1.2 Subsistence Consumption in Developing Countries ....... 152
3.1.3 Necessities in Developed Countries ....................... 156

Paragraph 3.2 Basic Needs in Standard Models .................. 159
3.2.1 Introducing Good-specific Subsistence Points into
   a Standard Dixit-Stiglitz framework ........................... 159
3.2.2 Intertemporal Optimisation with Moving Subsistence
   Consumption ........................................................ 171

Paragraph 3.3 Modelling Saving Decisions by a Simple Rule
   of Thumb ........................................................... 178
3.3.1 The Necessity Share in Outlay and in Income ............ 180
3.3.2 Determinants of Saving under the Proposed Rule of Thumb .......................................................... 181
3.3.3 The Aggregated Saving Rate under the Given Rule of Thumb ......................................................... 184
3.3.4 Factors Influencing the Propensity to Save and to Dissave ....................................................... 191
3.3.5 Summary: Model Predictions ................................................................. 192

Chapter 4. The Patterns of Consumption Shares

Paragraph 4.1 How to Identify Basic Needs? .......................................................... 197
4.1.1 Two Approaches to the Historic Path of the Necessity Share .................................................... 197
4.1.2 Basic Expenditure Groups versus Luxury Spending .................................................. 200

Paragraph 4.2 Consumption Patterns at the Macroeconomic Level .................................................... 203
4.2.1 Consumption Shares and Sectoral Prices in Germany .................................................... 203
4.2.2 Consumption Shares and Sectoral Prices in the U.S. ...................................................... 206

Paragraph 4.3 Consumption Patterns at the Microeconomic Level .................................................. 210
4.3.1 Methodological Notes ................................................................. 210
4.3.2 Food ................................................................. 211
4.3.3 Shelter ................................................................. 213
4.3.4 Clothing ................................................................. 214
4.3.5 Transportation ................................................................. 215
4.3.6 Communication ................................................................. 217
4.3.7 Furniture and Household Devices ................................................................. 217
4.3.8 Health Care ................................................................. 218
4.3.9 Entertainment and Recreation ................................................................. 219
4.3.10 Education ................................................................. 219
4.3.11 Restaurants and Hotels ................................................................. 220

Paragraph 4.4 Summary: The Historic Path of the Necessity Share .................................................. 221
4.4.1 What Belongs in the Necessity Basket? ................................................................. 221
4.4.2 First Approach to the Necessity Share ........................................ 222
4.4.3 Second Approach to the Necessity Share ........................................ 224
4.4.4 The Individual Necessity Share ..................................................... 229

Chapter 5. Does Our Model Match the Facts?

Paragraph 5.1 Model Predictions and the Stylised Facts of Saving ................................................................. 235

Paragraph 5.2 Model Predictions and Empirical Evidence at the Microeconomic Level ...................................................... 238
5.2.1 The Necessity Share and German Saving Rates ....................... 238
5.2.2 Reproducing U.S. Saving Rates of the Mid-20th Century .......... 250

Paragraph 5.3 Model Predictions and Empirical Evidence at the Macroeconomic Level ...................................................... 256
5.3.1 Preliminary Notes ................................................................. 256
5.3.2 Saving Rate and Basic Needs in Germany ................................. 257
5.3.3 Saving Rate and Basic Needs in the U.S. ................................. 262
5.3.4 Is Our Model Able to Reproduce the Historic Path? ............. 266

Summary ......................................................................................... 303

References ..................................................................................... 309
