CONTENTS

CHAPTER A. INTRODUCTION .................................................................................................................. 13
1. The relevance of the institutional perspective ............................................................................. 13
2. Aim, scope and contribution .......................................................................................................... 16
3. Positioning the thesis within a larger research project ................................................................. 19
4. Acknowledgements ....................................................................................................................... 22

PART I: CONCEPT AND MEASUREMENT OF INFORMALITY ................................................................. 25

CHAPTER B. INFORMAL DYNAMICS OF ECONOMIC PROCESSES – CONCEPTUAL REMARKS ON INFORMALITY AND AGILITY IN EMERGING ECONOMIES .................................................................................................................. 27
1. The concept of informality from an institutional perspective ......................................................... 27
1.1. The shifting conceptualisations of “informality” over time ....................................................... 27
1.2. Informality in New Institutional Economics ............................................................................. 29
1.3. The spatial dimension of informality in institutional economics .............................................. 33
1.4. Illustrations of informality in the spatial economy ................................................................. 34
1.5. Outline of a research programme on informality ..................................................................... 41
2. Agility: sustained competitive advantage by combining informality and flexibility....................... 42
2.1. Competitive strategies in emerging economies of newly industrialising countries..................... 43
2.2. The agility hypothesis .............................................................................................................. 45
2.3. Agile firm organisation and sustained competitive advantage .................................................. 47
2.4. Outline of an empirical research agenda on agile firm organisation ....................................... 52
3. Regional aspects of informality and agility: upgrading and resilience ............................................ 54
3.1. Regional agility and upgrading ............................................................................................... 54
3.2. Regional agility and resilience ................................................................................................. 57
4. Conclusion ...................................................................................................................................... 66

CHAPTER C. MEASURING INFORMALITY AND FLEXIBILITY – AN OVERVIEW OF DATA AND METHODS USED FOR THE EMPIRICAL ANALYSIS .................................................................................................................. 67
1. Company surveys ......................................................................................................................... 67
1.1. Hong Kong survey ................................................................................................................... 67
1.2. Pearl River Delta survey .......................................................................................................... 68
2. Qualitative interviews .................................................................................................................... 70
3. Measuring the importance of personal networks and other facets of informality ......................... 71
PART II: INFORMAL ORGANISATION OF BUSINESS ACTIVITIES

CHAPTER D. SPATIAL AND ORGANISATIONAL TRANSITION
OF AN EAST ASIAN HIGH-GROWTH REGION: THE ELECTRONICS
INDUSTRY IN THE GREATER PEARL RIVER DELTA

1. Introduction
2. Conceptualising spatial and organisational transition in high-growth regions
   2.1. Spatial transition
   2.2. Organisational transition
3. Empirical results on spatial transitions
   3.1. Positioning of the GPRD within the global electronics value chain
   3.2. Evolution of spatial patterns within the GPRD
4. Empirical results on organisational transitions
   4.1. Governance of supplier relations and cross-border production
   4.2. An example of a spatio-temporal transition of informal ownership rights
   4.3. The role of personal relationships for establishing contact with customers and suppliers
5. Discussion and conclusion

CHAPTER E. PERSONALISATION OF BUSINESS RELATIONS
IN HONG KONG AND THE PEARL RIVER DELTA:
AN INSTITUTIONAL NECESSITY OR A STRATEGIC OPPORTUNITY?

1. Introduction
2. The rationale behind personalisation of business relations
   2.1. Personalisation as opportunity or necessity
   2.2. Personalisation and the management of firms in China
   2.3. Hypotheses for the empirical analysis
3. Descriptive results on the importance of personal networks
   3.1. Comparison of personal networks in HK and the PRD
   3.2. The extent of personalisation for different business tasks
   3.3. Personal relations to government officials
4. Reasons for using personal relations
4.1. Regression analysis for firms in HK
4.2. Regression analysis for firms in the PRD
5. Discussion of qualitative evidence
6. Summary and conclusion
PART III: INFORMAL ASPECTS OF UPGRADING AND INNOVATION

CHAPTER F. THE ROLE OF FOREIGN AND DOMESTIC FIRMS IN REGIONAL INNOVATION SYSTEMS OF LATECOMER COUNTRIES: EMPIRICAL EVIDENCE FROM THE ELECTRONICS INDUSTRY IN THE PEARL RIVER DELTA

1. Introduction
2. Conceptual considerations on the upgrading of technological capabilities and innovation in developing countries
   2.1. Technological capabilities of latecomer firms and incumbents
   2.2. External orientation of latecomer firms
   2.3. The regional innovation perspective
3. Overview of the electronics industry in the Guangdong province
   3.1. Relevance of the electronics industry and ownership patterns
   3.2. Technological activities in the electronics industry
4. Innovation and upgrading activities of domestic and non-domestic electronics firms
   4.1. Types of innovation and innovation intensity
   4.2. Use of external sources for innovation activities
   4.3. Strategic orientation
   4.4. Comparison of innovation intensities in Guangzhou and Dongguan
5. Discussion and Conclusion

CHAPTER G. THE IMPACT OF GOVERNANCE AND STRATEGY ON CORPORATE INNOVATION ACTIVITIES AND FIRM PERFORMANCE IN EMERGING ECONOMIES

1. Introduction
2. Corporate governance, strategy and innovation in emerging economies
   2.1. The nexus of organisational capabilities and innovation
   2.2. Governance and strategy in the context of ethnic Chinese business systems
3. Empirical results on the impact of corporate governance and strategy on innovation
   3.1. Differences in corporate governance patterns between foreign and domestic firms
   3.2. Descriptive evidence for the impact of governance on innovation
   3.3. Descriptive evidence for the impact of strategy on innovation
   3.4. Explanation of differences in the innovation intensity of foreign and domestic firms
4. Discussion
5. Conclusion
CHAPTER H. UPGRADING STRATEGIES OF FIRMS FROM 
EMERGING ECONOMIES IN GLOBAL VALUE CHAINS: 
THREE CASES FROM THE ELECTRONICS INDUSTRY 
IN HONG KONG ................................................................. 192
1. Introduction ........................................................................ 192
2. Identification of determinants for upgrading on three levels .......... 194
  2.1. Upgrading within global value chains .................................. 194
  2.2. Internal learning efforts ................................................. 198
  2.3. The regional context for innovation and upgrading .................. 199
3. The regional production and innovation system of Hong Kong 
   and the Pearl River Delta ................................................... 200
4. The case studies .................................................................... 202
  4.1. Company A: transition from OEM to OBM .......................... 203
  4.2. Company B: fabless production of display integrated circuits (ICs) . 205
  4.3. Company C: diversification into strategic manufacturing investments 
      of a trading company .................................................... 206
5. Discussion and conclusion .................................................... 207

CHAPTER I. SUMMARY AND CONCLUSION ...................................... 213
1. Summary of the major findings ............................................. 213
2. Major findings with respect to informal dynamics ....................... 218
3. Policy implications ............................................................ 220
4. Research implications ....................................................... 222

LIST OF REFERENCES .......................................................... 224
