An Introduction to Return and Risk Measurement

Springer
## Contents

1 Introduction ................................................................................. 1

2 Return Analysis ........................................................................ 5
   2.1 Interest Rate, Return and Compounding .......................... 5
   2.2 Return Contribution and Attribution ............................... 10
      2.2.1 The Arithmetic Attribution .................................. 19
      2.2.2 The Geometrical Attribution .................................. 25
      2.2.3 Currency Attribution Basics .................................. 28
   2.3 Time-Weighted Rate of Return ......................................... 31
      2.3.1 Measuring Absolute Return ................................... 31
      2.3.2 Measuring Relative Return ................................... 39
   2.4 Money-Weighted Rate of Return ....................................... 47
      2.4.1 First Properties of the Internal Rate of Return (IRR) Equation .................................................. 47
      2.4.2 Approximating the Solution of the IRR Equation Near Zero .................................................. 53
   2.5 TWR Attribution Versus MWR Attribution ...................... 62
      2.5.1 Absolute Decomposition of the MWR ....................... 62
      2.5.2 A First Discussion of the Difference Between the MWR and TWR ........................................ 71
      2.5.3 Relative Decomposition of the IRR .......................... 73

3 Risk Measurement ...................................................................... 83
   3.1 Absolute Risk ................................................................. 85
      3.1.1 The Risk of a Portfolio ............................................. 85
      3.1.2 Value at Risk (VaR) .................................................. 89
   3.2 Relative Risk ................................................................. 92
      3.2.1 The Relative Risk of Two Portfolios ......................... 92
      3.2.2 The Tracking Error .................................................. 95
   3.3 Risk Decomposition at the Segment Level ...................... 101
3.4 Risk Decomposition with Factor Analysis
   3.4.1 Cross-sectional Model (Regression over Securities) 116
   3.4.2 Time Series Model (Regression Over Time) 119
   3.4.3 The Principal Component Analysis 120
   3.4.4 Two Illustrations 120

3.5 Probability Concepts 128

4 Performance Measurement
   4.1 Investment Process and Portfolio Construction 135
      4.1.1 Active Investment Strategy 137
      4.1.2 Passive Investment Strategy 145
   4.2 Portfolio Optimization 145
   4.3 Absolute Risk-Adjusted Measures 159
   4.4 The Capital Asset Pricing Model (CAPM) 162
   4.5 Relative Risk-Adjusted Measures 170

5 Investment Controlling 177
   5.1 Objectives and Activities 177
   5.2 Quantitative Building Blocks 180
      5.2.1 Performance Measurement 180
      5.2.2 Performance Administration 181
      5.2.3 Performance Reporting 182
      5.2.4 Portfolio Analysis 183
   5.3 Qualitative Building Blocks 187
      5.3.1 Performance Watch List 187
      5.3.2 Portfolio Analytics 189
      5.3.3 Performance Review 189
   5.4 Example of a Performance Review 190
   5.5 Review and Concluding Remarks 191
