## Contents in full

**Preface**

1. **Keynes and the Classics**
   1.1 Introduction
   1.2 The textbook Classical model: the labour market with flexible wages
   1.3 The textbook Keynesian model: the labour market with money-wage rigidity
   1.4 Generalized disequilibrium: money-wage and price rigidity
   1.5 The New Classical model
   1.6 Conclusions

2. **The first Neoclassical Synthesis**
   2.1 Introduction
   2.2 A simple dynamic model: Keynesian short-run features and a Classical full equilibrium
   2.3 The correspondence principle
   2.4 Can increased price flexibility be destabilizing?
   2.5 Monetary policy as a substitute for price flexibility
   2.6 Conclusions

3. **Model-consistent expectations**
   3.1 Introduction
   3.2 Uncertainty in traditional macroeconomics
   3.3 Adaptive expectations
   3.4 Rational expectations: basic analysis
   3.5 Rational expectations: extended analysis
   3.6 Conclusions

4. **The micro-foundations of modern macroeconomics**
   4.1 Introduction
   4.2 The Lucas critique and related controversies
   4.3 Household behaviour
   4.4 Firms’ behaviour: factor demands
   4.5 Firms’ behaviour: setting prices
   4.6 Conclusions
9.4 Low-income support policies in developing economies
9.5 Multiple equilibria
9.6 Conclusions

10 Traditional growth theory
10.1 Introduction
10.2 The Solow model
10.3 Exogenous growth with micro-foundations
10.4 A benefit–cost analysis of debt reduction
10.5 Natural resources and the limits to growth
10.6 Conclusions

11 New growth theory
11.1 Introduction
11.2 Endogenous growth: the basic model
11.3 Endogenous growth: human capital
11.4 Endogenous growth: R&D
11.5 An evaluation of endogenous growth analysis
11.6 Conclusions

12 Growth policy
12.1 Introduction
12.2 Tax reform: income taxes versus the progressive expenditure tax
12.3 Economic growth and subjective happiness
12.4 Unemployment and growth
12.5 The ageing population and future living standards
12.6 Conclusions
