Household and Living Arrangement Projections

The Extended Cohort-Component Method and Applications to the U.S. and China
Contents

1 Introduction ......................................................... 1
  1.1 Definitions of Family and Household .................. 2
  1.2 Why Project Household and Living Arrangements? .... 2
    1.2.1 Household Projections, Socioeconomic Planning 
       and Policy Analysis .................................. 2
    1.2.2 Household Projections and Consumption 
       Market Analysis ....................................... 4
    1.2.3 A Tool for Development of Demographic Theories ... 4
  1.3 Why Do Household Projections Need to Use Demographic 
      Rates as Input? ......................................... 6
    1.3.1 Demographic Change and Family Household 
       Dynamics ............................................... 6
    1.3.2 Demographic Change, Elderly Living Arrangements, 
       and Care Needs and Costs ............................ 7
    1.3.3 Demographic Changes and Living Arrangements 
       of Children ............................................. 8
    1.3.4 Demographic Changes and Family Life Course 
       of Adults, Especially Single Mothers ................ 9
  1.4 A Brief Review of Methodological Approaches 
      for Household Projections and Simulations ........... 10
    1.4.1 Headship Rate ...................................... 10
    1.4.2 Micro-Simulation Models ........................... 11
    1.4.3 Macro-Simulation Models ........................... 12
  1.5 Concluding Remarks ......................................... 15

Part I Methodology, Data, and Assessments

2 Profamy: The Extended Cohort-Component Method 
   for Household and Living Arrangement Projections .... 19
  2.1 Units of Analysis and Demographic Status Identification 19
2.2 Core Ideas of the ProFamy Extended Cohort-Component Model

2.2.1 Core Idea 1: A Multi-State Accounting Model

2.2.2 Core Idea 2: Distinguishing Continuously Occurring from Periodic Demographic Accounting Processes

2.2.3 Core Idea 3: A Judicious Use of Independence Assumptions

2.2.4 Core Idea 4: Employing the National Age-Sex-Specific Model Standard Schedules and the Summary Parameters at the Sub-National Level

2.3 The Demographic Accounting Equations

2.4 Projecting Households and All Individuals of the Entire Population Simultaneously

2.5 Consistencies in the Two-Sex and Multi-Generation Model

2.5.1 Consistency Between Males and Females

2.5.2 Consistency Between Children and Parents

2.5.3 Consistency Between Births Calculated for the Female and Male Populations

2.5.4 Consistency Between Females’ and Males’ Status of Co-residence with Children Before and After Divorce (or Dissolution of Cohabitation) or Remarriage

Appendix 1: Procedure to Correct the Inaccurate Accounting of Household Size Distribution Due to the Lack of Capacity to Identify the Reference Person’s Co-residence Status with Other Relatives or Non-relatives

Appendix 2: A procedure to Meet the Requirement that Other Relatives and Non-relatives Cannot Be Reference Persons of the Household

Appendix 3: Parity Transition Probabilities in the 1st and 2nd Half of the Year

Appendix 4: Procedures for Estimating Transition Probabilities of Status of Co-residence with Parents

Appendix 5: Procedures for Estimation of Probabilities of Change in Number of Children Living Together

3 Data Needs and Estimation Procedures

3.1 Data Needed

3.2 Estimation and Projections of Age-Sex-Specific Demographic Rates

3.3 Pooling Data from Multiple Surveys to Estimate the Age-Sex-Status-Specific Standard Schedules: Rationale and Justification

3.4 Estimation of Demographic Summary Measures

Appendix 1: Procedures to Ensure the Accuracy of the Base Population for the Projections
Appendix 2: Standardized General Rates of Marriage/Union Formation and Dissolution ................................................................. 59
Appendix 3: Procedure to Estimate Proportions of Those Aged 40–44 in Year $t$ Who Do Not Live with Parents and Proportions of Elders Aged $x$ in Year $t$ Living with Adult Child(ren), While Taking into Account the Effects of Large Changes in Fertility ................................................................. 61
Appendix 4: Procedure to Calculate Sex-Age-Specific Rates While Ensuring the Consistency of the Two-Sex Constraints and the Projected Standardized General Rates of Marriage/Union Formation and Dissolution ................................................................. 64
Appendix 5: Procedure to Estimate General Rates of Marriage/Union Formation and Dissolution at the Starting Year of the Projections ................................................................. 70

4 Empirical Assessments and a Comparison with the Headship Rate Method ................................................................. 73
   4.1 Empirical Assessments: Comparisons of Projections and Census Enumerations at the National and Sub-National Levels ................................................................. 73
   4.2 A Comparison Between the Classic Headship Rate Method and the ProFamy Extended Cohort-Component Approach ................................................................. 80
       4.2.1 Conceptual Issues ................................................................. 80
       4.2.2 Linkage with Demographic Rates ................................................................. 80
       4.2.3 Cross-Sectional Extrapolations Versus Cohort-by-Cohort Projections ................................................................. 81
       4.2.4 Household Members Other than Heads ................................................................. 81
       4.2.5 Information Produced and Adequacy for Planning ................................................................. 81
       4.2.6 Methodology ................................................................. 83
       4.2.7 Data Requirements, Time and Resource Costs ................................................................. 84
   4.3 A Comparison of Housing Demand Forecast Errors Between the Headship Rate Method and the ProFamy Extended Cohort-Component Approach ................................................................. 86
Appendix 1: Procedures to Project Housing Demands Based on Household Projections Employing the Headship Rate Method or the ProFamy Approach ................................................................. 88

5 Extension of ProFamy Model to Project Elderly Disability Status and Home-Based Care Costs, with an Illustrative Application ................................................................. 91
   5.1 Introduction ................................................................. 91
   5.2 The Further Extended ProFamy Method Including Projections of Elderly Disability and Home-Based Care Costs ................................................................. 93
   5.3 An Illustrative Application to China ................................................................. 95
       5.3.1 Data Sources and Estimates ................................................................. 95
       5.3.2 Scenario Design and Parameters ................................................................. 97
       5.3.3 Results ................................................................. 100
   5.4 Concluding Remarks ................................................................. 107
6 Household and Living Arrangement Projections at the Small Area Level .................................................. 109
   6.1 Basic Concepts to Apply the ProFamy Approach in Combination with Ratio Methods for Small Areas .................. 109
   6.2 The Constant-Share and Shift-Share Ratio Methods .................. 111
   6.3 Empirical Assessment and Illustrative Applications .................. 112

7 A Simple Method for Projecting Pension Deficit Rates and an Illustrative Application .................................. 115
   7.1 Introduction .................................. 115
   7.2 The Method .................................. 116
   7.3 Illustrative Application to China .................................. 118
      7.3.1 The Pension System in China .................................. 118
      7.3.2 Assumptions of Parameters for Different Scenarios .......... 120
      7.3.3 The Results .................................. 125
   7.4 Discussion .................................. 127
   7.5 Concluding Remarks .................................. 129
Appendix 1: Derivation of the Simple Method .................................. 130

Part II Applications in the United States

8 U.S. Family Household Momentum and Dynamics: Projections at the National Level .................................. 135
   8.1 Data and Estimates .................................. 135
   8.2 Medium Projections .................................. 138
   8.3 Family Household Momentum .................................. 140
   8.4 Low and High Bounds of Household and Living Arrangement Projections .................................. 141
   8.5 Racial Differentials in Dynamics of Households and Living Arrangements .................................. 143
   8.6 Concluding Remarks .................................. 145
Appendix 1: A Procedure to Adjust the o/e Rates of Marital/Cohabiting Union Status Transitions Based on the NSFH and NSFG Data to Be Consistent with the o/e Rates of Marital Status Transitions Based on the CPS, SIPP, NSFH, and NSFG Data .................................. 146
Appendix 2: Comparisons of Summary Measures of Marital Status Life Tables (Excluding Cohabitation) Between Our Estimates Based on the Pooled Survey Data and Schoen’s Estimates Based on Vital Statistics, All Races Combined .................................. 148
Appendix 3: Major Parameters of Medium Forecasts, Smaller and Larger Family Household Scenarios .................................. 149

9 Household and Living Arrangement Projections for the 50 States, Washington DC, and Relatively Large Counties in the U.S. .................................. 151
   9.1 Data and Parameter Assumptions .................................. 151
   9.2 Low and High Bounds of Household and Living Arrangement Projections .................................. 152
9.3 Summary of Projection Outcomes .......................... 154
9.4 Discussion and Concluding Remarks ........................ 156
Appendix 1: Information About Population Sizes of the 50 States, DC, the Six Counties of SC, and the M-S Area .......... 157
Appendix 2: Output of Household and Living Arrangement Projections, U.S. Sub-National Level ........................ 158

10 Effects of Changes in Household Structure and Living Arrangements on Future Home-Based Care Costs for Disabled Elders in the United States ........................ 167
10.1 Introduction ................................................. 167
10.2 Data Sources and Parameter Estimates and Assumptions ...... 170
   10.2.1 Demographic Age-Sex-Specific Standard Schedules and Summary Parameters .......................... 170
   10.2.2 Estimates of Disability and Home-Based Care Cost Parameters .......................... 171
10.3 Results ...................................................... 172
   10.3.1 A Substantial Increase in Number of Disabled Elders and Remarkable Acceleration After 2020, Especially for the Oldest-Old ................................................. 173
   10.3.2 The Increase in Home-Based Care Costs for Disabled Elders Will Dramatically Accelerate After 2020, Especially for the Disabled Oldest-Old ......................... 178
   10.3.3 Gender Differentials ...................................... 179
   10.3.4 Racial Differentials ....................................... 180
   10.3.5 High and Low Bounds of Home-Based Care Costs .... 182
10.4 Concluding Remarks ......................................... 182
Appendix 1: The Estimated and Assumed Demographic Summary Measures in the Baseline and Future Years for the United States ........................................ 185
Appendix 2: A Two-Step Procedure to Estimate Age-Sex-Race-Living Arrangement-Disability Status-Specific Care Hours and Care Costs Per Eider .............................. 186
Appendix 3: Age-Sex-Race-Living Arrangement-Specific Disability Rates, Home-Based Care Hours, and Care Costs ($), Based on Data from NLTCS 1999 Wave, the United States .... 187

11 Projections of Household Vehicle Consumption in the United States ........................................ 189
11.1 Introduction ................................................ 189
11.2 Data Sources and Model Specification to Account for Regional, Income, and Racial Differentials .......... 190
11.3 Estimation of Household Vehicle Ownership Rates by Household Characteristics, Race, and Region ...... 191
11.4 Results of Household Vehicle Consumption Forecasts .......... 194
   11.4.1 Household Projection Outcome ......................... 194
11.4.3 A General Description of the Forecasts ............. 197
11.4.4 Forecast by Age and Race of Householders ........ 197
11.4.5 Forecast by Type, Size and Income of Households .. 200
11.4.6 Forecast by Region .................................. 201
11.5 Conclusion and Discussion .............................. 203
Appendix 1: The Four Regions Defined By the US Census Bureau ... 205
Appendix 2: Consistency Examination Across the Four Regions ...... 205
Appendix 3: Consistency Examination for Percentile Distribution of Income Categories .................. 205

Part III Applications in China

12 Household and Living Arrangement Projections in China at the National Level .................................................. 211
12.1 Introduction ............................................... 211
12.2 Data and Estimates ........................................ 212
12.3 Profile of Future Trends .................................... 214
12.3.1 Rapid Population Aging ............................... 214
12.3.2 Projection of Family Household Structure and Size .... 217
12.3.3 Proportion of Elderly Who Live in Empty-Nest Households .......................... 219
12.3.4 Dependency Ratios ..................................... 220
12.4 Summary and Concluding Remarks .......................... 222

13 Dynamics of Households and Living Arrangements in the Eastern, Middle, and Western Regions of China .................. 225
13.1 Introduction ............................................... 225
13.2 Method, Data Sources, and Parameter Assumptions ........ 225
13.3 Results of the Comparative Regional Projections ........... 228
13.3.1 The Middle Region Will Face the Most Serious Challenges of Population and Household Aging ........ 228
13.3.2 Population and Household Aging Will Be More than 1.5 Times or Twice as Severe in Rural Areas Compared to Urban Areas in the Middle and Eastern Regions ........................................... 232
13.4 Discussion and Policy Considerations ...................... 234
Appendix 1: Parameters of Population and Household Projection at the Regional Level ............................................. 236

14 Application of Household and Living Arrangement Projections to Policy Analysis in China .................................. 237
14.1 Introduction ............................................... 237
14.2 A Brief Review of Related Policy Research and Debates on Fertility Policy Transition Options in China .................. 238
14.3 The Data Sources, Policy Scenario Designs, and Parameter Assumptions ........................................... 240
14.4 Comparative Analysis Under Different Fertility Policy Scenarios ....................................................... 243
  14.4.1 Population Growth ............................................. 243
  14.4.2 Percentage of Elderly and Elderly Living in Empty-Nest Households ........................................... 244
  14.4.3 Labor Force and the Elderly Dependency Ratio ............................................................ 245
  14.4.4 Resources of Care Providers for Disabled Elderly .............................................................. 248
  14.4.5 Sex Ratio at Birth and Marriage Squeeze .................................................................................. 249
  14.4.6 Socioeconomic Costs and Human Capital ................................................................................. 251
  14.4.7 The “Two-Child Solely for Only-Child Couples” Is a Very Poor Policy Option ......................... 253
14.5 Challenges and Opportunities Associated with Retirement Age and Rural Old Age Insurance Program ........................................... 254
14.6 Policy Recommendations ............................................... 256
  14.6.1 Transfer to the Two-Child Policy with Adequate Spacing Fertility Policy as Soon as Possible .... 256
  14.6.2 Gradually Increase Age at Retirement ...................................................................................... 258
  14.6.3 Further Develop the Rural Old Age Insurance Program ......................................................... 259
14.7 Concluding Remarks .................................................. 259

15 Household Housing Demand Projections for Hebei Province of China ................................................. 263
15.1 Introduction ............................................................................ 263
15.2 Method, Data, and Input Parameter Estimates ........................................... 264
  15.2.1 The Method ........................................................................ 264
  15.2.2 Data Sources, Estimates, and Parameter Assumptions ......................................................... 265
15.3 Results and Discussion .......................................................... 268
  15.3.1 A Brief Outline of the Current Household Housing Situation .................................................. 268
  15.3.2 General Trends of Household and Population Dynamics ....................................................... 269
  15.3.3 General Trends of Owned and Rental Housing Demands ....................................................... 270
  15.3.4 Housing Demand By Rural and Urban Residence ................................................................. 274
  15.3.5 The Aging of Housing Demand .............................................................................................. 275
  15.3.6 Housing Demand By Household Type ..................................................................................... 275
15.4 Summary and Relevant Policy Considerations .................................................. 276
15.5 Concluding Remarks ............................................................ 277
Part IV ProFamy: A Software for Household and Consumption Forecasting

16 Setting Up the Projection Model ........................................ 283
  16.1 Main menu .......................................................... 283
  16.2 Create, Open and Save ProFamy Files ......................... 284
  16.3 Specify Models and Data Types ................................. 286

17 Preparing Input Data, Computing, and Managing Output ........... 297
  17.1 How to Prepare Input Data of the Base Population .......... 297
     17.1.1 Format and Variable Definitions for the Input File of Base Population .............................................. 298
     17.1.2 How to Run BasePop ........................................ 302
  17.2 How to Prepare the Input Data for Standard Schedules .... 304
     17.2.1 Input Data Sheets .......................................... 305
     17.2.2 Standard Schedules of Mortality ......................... 307
     17.2.3 Standard Schedules of Marriage/Union Formation and Dissolution ......................................................... 307
     17.2.4 Standard Schedules of Fertility ............................................... 308
     17.2.5 Standard Schedules of Leaving the Parental Home ..... 311
     17.2.6 Standard Schedules of Migration .......................... 312
  17.3 How to Prepare the Summary Measures .......................... 314
  17.4 How to Prepare Input Data for the Total Population (100 % Tabulation) By Age, Sex and Marital Status .......... 316
  17.5 Input Data for the Total Institutional Population (100 % Tabulation) By Age and Sex ................................... 317
  17.6 How to Run “Computation of the Projection” ......... 318
  17.7 How to View and Manage the Results ........................... 319

18 Epilogue: Summary and Future Perspectives ........................ 323
  18.1 Methodological Core Ideas and Empirical Assessments of the ProFamy Extended Cohort-Component Approach and Comparisons with the Classic Headship Rate Method .......... 323
  18.2 Extensions of the ProFamy Model to Project Elderly Disability Status, Home-Based Care Costs, and Pension Deficit Rates, with Illustrative Applications ................... 325
  18.3 Household and Living Arrangement Projections at the Small Area Level ......................................................... 326
  18.4 Applications to the United States ................................ 326
  18.5 Applications to China .............................................. 328
  18.6 User's Guide of the ProFamy Software for Household and Consumption Forecasting ............................... 329
  18.7 Limitations and Future Research Perspectives .................. 330

References .............................................................. 333
