## ABSTRACT

Acknowledgements

### Chapter 1. Bid-Price Controls for Network Revenue Management (joint with Barış Ata)

1.1. The model

1.2. An Adapted Generalized Bid-Price Control and Its Optimality

1.3. Predictable Generalized Bid-Price Controls

1.4. A Class of Simple Predictable Bid-Price Controls

1.5. A Special Case with Network Flow Structure

### Chapter 2. Bid-Price Controls for Network Revenue Management: Martingale Characterization of Optimal Bid Prices (joint with Barış Ata)

2.1. The Model

2.2. Bid-Price Control Definitions and Summary of Results

2.3. Dual Network Revenue Management Problem

2.4. An Optimal Generalized Bid-Price Control

2.5. An $\epsilon$-Optimal Bid-Price Control

2.6. Discussion
B.1. Summary of Bismut (1973) 194
B.2. An Auxiliary Weak* Convergence Lemma 198
B.3. Derivation of the dual network revenue management problem and the extremality results 203
B.4. Proofs in Section 2.4 214
B.5. Proofs in Section 2.5 217

Appendix C. Proofs of the Results in Chapter 3 224

Appendix D. Proofs of the Results in Chapter 4 240
D.1. Proofs of the Results in Section 4.1 240
D.2. Proofs of the Results in Section 4.2 246
D.3. Technical Results 291
