## Contents

Foreword ................................................................. 13

First part  
Diagnosis .............................................................. 15

Chapter I  
The shifting digital paradigm in Latin America ...................... 17  
A. The era of cloud computing ........................................ 18  
B. Broadband in the region ............................................. 24  
C. Lessons for a new era ............................................... 33  

Bibliography ........................................................... 37

Chapter II  
The demand gap: drivers and public policies  ........................ 39  
A. Measuring the digital divide from the demand side ................ 40  
B. Understanding the demand gap ...................................... 44  
C. The situation in Latin America ..................................... 48  
1. Broadband coverage ............................................... 50  
2. The demand gap ................................................... 51  
3. Explaining the demand gap ...................................... 52  
D. Public policies to close the demand gap ........................... 61  
1. Policies for addressing the affordability barrier ................ 61  
2. Policies for addressing the skills barrier ........................ 64  
3. Policies for addressing the lack of interest/relevance barrier ..... 66  
4. Programmes targeting specific population segments .......... 67  
E. Conclusions ......................................................... 68
Chapter VIII
Broadband and industrial policy: the Korean experience

A. Broadband industrial policy: definition and scope
1. Sectoral industrial policy in the period before the WTO (pre-1995: 1G)
3. Targeted cutting-edge policy in the WTO (2005-2010: 3G)

B. Broadband structure and dynamics
1. Expansion and mass adoption
2. Drivers of mass penetration
3. Market structure
4. ICT goods production and foreign trade

C. Policy convergence
1. Broadband development policy
2. Competition and regulation
3. Broadband industrial policy
4. Technological development policy

D. The Giga Korea Plan 2020

E. Conclusions

Chapter IX
Net neutrality: debate and policies

A. Introduction

B. What is net neutrality?
1. The non-discrimination principle
2. The growth of traffic and net neutrality

C. The situation in Europe, the United States and Asia-Pacific
1. Europe and the United States
2. Asia-Pacific

D. Situation and outlook in Latin America
1. Chile
2. Brazil

E. Criteria for developing a national policy
Fourth part
The future of the ecosystem

Chapter X
The advance of cloud computing

A. Introduction
B. What is cloud computing?
1. Essential characteristics
2. Service models
3. Enabling technologies
4. Deployment models
5. Service layers
C. Problems and challenges
1. Security and privacy
2. Reliable network access
3. Legal and regulatory aspects
4. Resistance to change
D. Migration to cloud computing
1. Reasons for migrating
2. Assessing the benefits of cloud computing
3. Considerations for successful migration
E. The situation in Latin America
1. Legal and regulatory environment
2. Degree of adoption in the region
F. Mobile cloud computing
1. The structure of mobile cloud computing
2. Challenges
3. Mobile cloud computing
G. “Everything” in the cloud: reality or utopia?
1. Back to the past
2. Technical considerations
3. Legal and procedural aspects
H. Best international practices
1. Explore cloud benefits
2. Understand and manage cloud-related risks
3. Promote service transparency
4. Clarify and enhance accountability
5. Ensure data portability
6. Facilitate interoperability
7. Adapt and harmonize regulatory frameworks
8. Provide sufficient connectivity

Bibliography
Chapter XI
The challenge of over-the-top content and services

A. Introduction
B. Over-the-top services, applications and content
C. Main findings in the literature
   1. Changes in the value chain and the online-industry threat
   2. The network neutrality debate
D. The over-the-top market in Latin America
   1. Incumbent operators, OTT strategies and supply
   2. Netflix, Skype and WhatsApp
E. The strategy and policy debate
F. Conclusions

Bibliography

ECLAC Publications

Tables

II.1 Developed countries: size of the fixed broadband demand gap, 2011
II.2 Developed countries: mobile broadband demand gap, 2011
II.3 United States: reasons for not adopting broadband in the home, 2009
II.4 United States: reasons for not adopting broadband based on the availability of a computer in the home, 2011
II.5 Spain: reasons for not adopting broadband, by income level, 2011
II.6 Internet users and broadband subscribers in Latin America, 2011
II.7 Broadband coverage in Latin America, 2011-2012
II.8 The fixed broadband demand gap in Latin America, 2011
II.9 The mobile broadband demand gap in Latin America, 2011
II.10 Latin America: factors explaining the demand gap
III.1 Internet speeds in the region according to Ookla, 1 December 2012
III.2 Internet speeds in the region according to Akamai
III.3 Reference prices for fixed access per Mbps for download speeds of approximately 2 Mbps, November 2012
III.A.1 Definition of broadband
III.A.2 Key IXP performance indicators
III.A.3 Key country performance indicators
IV.1 Latin America: contribution of broadband to GDP growth
IV.2 Colombia: contribution of broadband to GDP growth
IV.3 Panama: contribution of broadband to GDP growth
IV.4 Chile: impact of broadband on job creation
Broadband in Latin America: Beyond Connectivity

IV.5 Colombia: impact of broadband penetration growth on employment growth ........................................ 120
IV.6 Dominican Republic: impact of increased broadband penetration on employment growth .................. 121
IV.7 Costa Rica: impact of broadband on growth in real household income ........................................ 122
IV.8 Colombia: impact of broadband penetration growth on real household income growth .................. 123
IV.9 Latin America: estimated economic impact of digitization ................................................................. 129
IV.10 Latin America: broadband supply and demand gap, 2011 ............................................................... 130
V.1 Model parameters ................................................................................................................................. 149
V.2 Regression and variance analysis statistics .......................................................................................... 149
VI.1 Change in the number of employed persons due to the introduction of cloud computing in Argentina .................................................. 181
VI.2 Business creation due to the introduction of cloud computing in Argentina ................................. 181
VI.3 Change in number of employed persons due to the introduction of cloud computing in Brazil ........ 181
VI.4 Business creation due to the introduction of cloud computing in Brazil .......................................... 182
VI.5 Job creation and business creation in the United States and in the 27 European Union member countries ........................................................................................................ 182
VII.A.1 ......................................................................................................................................................... 112
VIII.1 Drivers of broadband development in the OECD and the Republic of Korea ................................. 227
VIII.2 ICT sector trade balance, 2010-2011 ............................................................................................... 234
VIII.3 Republic of Korea: master plans and strategic frameworks for broadband development .................. 237
VIII.4 Broadband regulatory policies ....................................................................................................... 239
VIII.5 The Giga Korea Plan 2020 ............................................................................................................. 244
VIII.6 Industrial and technological development model in Latin America and the Republic of Korea, 1960-2020 ................................................................................................................. 247
IX.1 Internet services according to delay sensitivity, bandwidth consumption and economic value .......... 255
IX.2 Global IP traffic projections, 2010-2015 ............................................................................................ 257
IX.3 Global consumer Internet traffic, 2010-2015 .................................................................................... 258
X.1 Characteristics of cloud computing ...................................................................................................... 278
X.2 Comparison between conventional models and cloud computing ..................................................... 288
X.3 Chilean regulation of cloud computing ............................................................................................... 297
X.4 Mobile cloud computing challenges and solutions ............................................................................ 302
XI.1 Description of over-the-top-services ................................................................................................. 321
XI.2 Service bundles including TV and first-generation strategies ......................................................... 328
XI.3 Second-generation strategies ............................................................................................................ 330
Figures

I.1 Internet user penetration in 2011 ...................................................... 32
I.2 Fixed and mobile broadband penetration in 2011 .......................... 33
I.3 Fixed and mobile broadband penetration in Latin America and the Caribbean and in OECD, 2006-2011 ................................. 34
I.4 2G and 3G coverage of the population in 2010 .............................. 35
I.5 Households with Internet access in urban areas, rural areas and nationally ............................................................... 35
I.6 Households with Internet access, by income quintile ..................... 36
I.7 Households with Internet access, by gender of the head of household ............................................................................. 37
I.8 1Mbps fixed broadband tariffs with relation to per capita GDP in 2012 .................................................................................. 38
I.9 Mobile broadband tariffs in relation to per capita GDP in 2012 ...... 38
I.10 Broadband connection speeds in 2012 ........................................ 39
I.11 Percentage of broadband connections, by speed range ............. 40
I.12 Bandwidth connected to the United States .................................. 41
II.1 United States: states with the lowest broadband penetration rates, 2010 ................................................................. 40
II.2 Quantification of the fixed and mobile demand gap ....................... 36
II.3 Latent fixed and mobile broadband demand in Latin America, 2011 ............................................................................... 42
II.4 Brazil: reasons for not subscribing to Internet in the home, 2007-2011 ......................................................................... 45
II.5 Brazil: home Internet adoption by socioeconomic level (SEL), 2011 .................................................................................. 46
II.6 Mexico: home Internet adoption by income decile, 2008-2010 .... 47
II.7 Home Internet adoption gap by income quintile (Q5/Q1) .......... 48
II.8 Costa Rica: residential Internet and computer use by educational level of the household head, 2010 ........................................ 49
II.9 Chile: residential Internet and computer use by educational level of the household head, 2009 ......................................................... 49
II.10 Costa Rica: residential broadband penetration by education level and income decile, 2010 ....................................................... 50
II.11 Costa Rica: home Internet and computer use, by age group, 2010 ..................................................................................... 51
II.12 Latin America: concentration of fixed broadband supply and average download price per Mbps ............................................ 54
III.1 Median monthly prices on North Pacific routes for 10 Gbps, second quarter 2010 to second quarter 2011 ................................. 80
III.2 Trends in median prices in major cities of Latin America ............ 81
III.3 Trends in median prices in major world cities ............................ 82
IV.1 Comparative contribution of broadband to economic growth ..... 109
IV.2 Typology of countries by stage of digitization, 2011 ................. 117
IV.3 Digitization and economic growth ............................................ 118
IV.4 Returns to scale from digitization ........................................ 119
IV.5 Digitization and employment ............................................. 120
IV.6 Digitization and innovation in a sample of 125 countries .......... 121
V.1 Mobile telephony penetration rate in the United States and the European Union compared with Latin America ............. 129
V.2 Statistical significance of the parameters, 1995-2011 ............... 133
V.3 Number of 3G networks in operation in Latin America ............. 134
V.4 Comparison between network launches ................................. 135
V.5 Growth in the number of 3G users ....................................... 136
V.6 Penetration of 3G services as of June 2012 ............................ 136
V.7 Correlation of penetration with time in service and GDP per capita .................................................. 137
V.8 Relationship between GDP per capita and time in service as of June 2012 .................................................. 138
V.9 Average quarterly increase in penetration, by network age ........ 139
V.10 Cost in economic well-being of a one-year delay in the launch of high-speed networks .................................. 142
V.11 Cost in economic well-being of a one-quarter delay in the launch of high-speed networks .............................. 143
VI.1 Transition of the main macroeconomic variables from the steady state of the pre-cloud economy to that of the cloud economy ..... 170
VIII.1 OECD: fixed-line broadband subscriptions (wired) per 100 inhabitants, by technology, December 2011 ......................... 215
VIII.2 Selected OECD countries: fixed broadband penetration ............. 216
VIII.3 OECD: ratio between broadband penetration per 100 inhabitants and GDP per capita in PPP dollars, 2011 ..................... 217
VIII.4 Broadband rates per Mbps of advertised speed, September 2011 .............................................................. 217
VIII.5 Business adoption of broadband, 2010 or latest available year ... 218
VIII.6 Fixed-line telephone subscribers by service provider ................ 221
VIII.7 Number of subscribers by service and mobile technology .......... 222
VIII.8 Mobile service providers: number of subscribers and market share .............................................................. 223
VIII.9 High-speed broadband providers: number of subscriptions and market share .................................................. 224
VIII.10 High-speed broadband coverage subscribers by technology ....... 225
IX.1 Fixed broadband access, by technology, 2011 ........................ 251
X.1 Why cloud computing? ..................................................... 281
X.2 Benefits of cloud computing in five European countries ............. 283
X.3 Savings from cloud computing ............................................ 284
X.4 Cloud computing regulation preparedness scorecard .................. 288
X.5 Adoption of cloud computing around the world ......................... 290
X.6 Growth of cloud computing in Brazil by level of processing ........ 290
X.7 Cloud services used in Colombia ......................................... 291
X.8 Outlook for data centre growth in Latin America ...................... 291
X.9 Access speed by type of connection in the region ........................................... 295
X.10 Mobile cloud computing revenue by region ...................................................... 298

Diagrams

II.1 Fixed and mobile broadband substitution and complementarity ........................................... 35
II.2 Impact of fiscal policy on broadband penetration .................................................. 55
IV.1 Economic impact of broadband ............................................................................. 104
IV.2 How broadband contributes to job creation ......................................................... 110
IV.3 Components of the digitization index .................................................................... 117
VIII.1 Analytical framework for broadband industrial policy ........................................ 211
VIII.2 Main areas of broadband industrial policy ........................................................ 233
X.1 Cloud computing model ......................................................................................... 266
X.2 Flexible platforms for adjusting data and applications in the cloud ......................... 268
X.3 Development of cloud computing and software platform infrastructure (SPI) ............ 270
X.4 Service layers definition ......................................................................................... 275
X.5 The extended data centre value chain ................................................................. 286
X.6 Architectures of mobile cloud computing ............................................................ 292
X.7 Architecture of a CloneCloud system ....................................................................... 297
X.8 Evolution of computing technologies and networks .............................................. 299
X.9 Action areas for promoting cloud computing ......................................................... 304
XI.1 Map of agents .......................................................................................................... 315

Boxes

V.1 Service penetration and unique subscribers ............................................................... 130
VIII.1 Broadband industrial policy approaches ........................................................... 228

Maps

III.1 Capacity of principal international routes in Latin America .................................. 76
X.1 Average Internet connection speed around the world .............................................. 273
