Central Counterparties

Mandatory Clearing and Bilateral Margin Requirements for OTC Derivatives

Jon Gregory
PART I: BACKGROUND

1 Introduction
   1.1 The crisis
   1.2 The move towards central clearing
   1.3 What is a CCP?
   1.4 Initial margins
   1.5 Possible drawbacks
   1.6 Clearing in context

2 Exchanges, OTC Derivatives, DPCs and SPVs
   2.1 Exchanges
      2.1.1 What is an exchange?
      2.1.2 The need for clearing
      2.1.3 Direct clearing
      2.1.4 Clearing rings
      2.1.5 Complete clearing
   2.2 OTC derivatives
      2.2.1 OTC vs. exchange-traded
      2.2.2 Market development
      2.2.3 OTC derivatives and clearing
   2.3 Counterparty risk mitigation in OTC markets
      2.3.1 Systemic risk
      2.3.2 Special purpose vehicles
      2.3.3 Derivatives product companies
      2.3.4 Monolines and CDPCs
      2.3.5 Lessons for central clearing
      2.3.6 Clearing in OTC derivatives markets
   2.4 Summary
3 Basic Principles of Central Clearing

3.1 What is clearing? 27
3.2 Functions of a CCP
   3.2.1 Financial markets topology 28
   3.2.2 Novation 28
   3.2.3 Multilateral offset 29
   3.2.4 Margining 30
   3.2.5 Auctions 30
   3.2.6 Loss mutualisation 31
3.3 Basic questions
   3.3.1 What can be cleared? 31
   3.3.2 Who can clear? 33
   3.3.3 How many OTC CCPs will there be? 35
   3.3.4 Utilities or profit-making organisations? 36
   3.3.5 Can CCPs fail? 36
3.4 The impact of central clearing
   3.4.1 General points 36
   3.4.2 Comparing OTC and centrally cleared markets 37
   3.4.3 Advantages of CCPs 37
   3.4.4 Disadvantages of CCPs 38
   3.4.5 Impact of central clearing 38

4 The Global Financial Crisis and the Clearing of OTC Derivatives

4.1 The global financial crisis
   4.1.1 Build-up 41
   4.1.2 Impact of the GFC 41
   4.1.3 CCPs in the GFC 42
   4.1.4 LCH.Clearnet and SwapClear 42
   4.1.5 Lehman and other CCPs 43
   4.1.6 Responses 44
   4.1.7 Objections 45
4.2 Regulatory changes
   4.2.1 Basel III 47
   4.2.2 Dodd-Frank 48
   4.2.3 EMIR 48
   4.2.4 Differences between the US and Europe 49
   4.2.5 Bilateral margin requirements 50
   4.2.6 Exemptions 52
4.3 Regulation of CCPs
   4.3.1 Problems with mandates 53
   4.3.2 Oversight 53
   4.3.3 CCPs and liquidity support 55

PART II: COUNTERPARTY RISK, NETTING AND MARGIN

5 Netting
   5.1 Bilateral netting
      5.1.1 Origins of netting 59
5.1.2 Payment netting and CLS 60
5.1.3 Close out netting 60
5.1.4 The ISDA Master Agreement 62
5.1.5 The impact of netting 62
5.1.6 Netting impact outside OTC derivatives markets 63

5.2 Multilateral netting 65
5.2.1 The classic bilateral problem 65
5.2.2 Aim of multilateral netting 65
5.2.3 Trade compression 66
5.2.4 Trade compression and standardisation 68
5.2.5 Central clearing 70
5.2.6 Multilateral netting increasing exposure 71

6 Margining 75
6.1 Basics of margin 75
6.1.1 Rationale 75
6.1.2 Title transfer and security interest 76
6.1.3 Simple example 76
6.1.4 The margin period of risk 77
6.1.5 Haircuts 78

6.2 Margin and funding 79
6.2.1 Funding costs 79
6.2.2 Reuse and rehypothecation 80
6.2.3 Segregation 82
6.2.4 Margin transformation 84

6.3 Margin in bilateral OTC derivatives markets 84
6.3.1 The credit support annex (CSA) 84
6.3.2 Types of CSA 85
6.3.3 Thresholds and initial margins 86
6.3.4 Disputes 87
6.3.5 Standard CSA 88
6.3.6 Margin practices in bilateral OTC markets 89

6.4 The risks of margining 92
6.4.1 Margin impact outside OTC derivatives markets 92
6.4.2 Operational risk 93
6.4.3 Liquidity risk 93
6.4.4 Funding liquidity risk 94
6.4.5 Segregation risk 94

6.5 Regulatory margin requirements 94
6.5.1 Background 94
6.5.2 General requirements 95
6.5.3 Threshold 97
6.5.4 Segregation and rehypothecation 98
6.5.5 Initial margin methodologies 99
6.5.6 Non-netting across asset class 101
6.5.7 Haircuts 101
6.5.8 Criticisms 102
7 Counterparty Risk in OTC Derivatives

7.1 Introduction
7.1.1 Background
7.1.2 Origins
7.1.3 Settlement and pre-settlement risk

7.2 Exposure
7.2.1 Definition
7.2.2 Mark-to-market and replacement cost
7.2.3 Non-margined exposure
7.2.4 Margined exposure

7.3 Valuation adjustments
7.3.1 CVA
7.3.2 Impact of margin on CVA
7.3.3 DVA and FVA
7.3.4 Wrong-way risk
7.3.5 The balance between counterparty risk and funding

Appendix 7A: Simple formula for the benefit of a margin agreement

PART III: STRUCTURE AND MECHANICS OF CLEARING

8 The Basics of CCP Operation

8.1 CCP setup
8.1.1 CCP ownership
8.1.2 Fees
8.1.3 What needs to be cleared?
8.1.4 Important OTC derivative CCPs

8.2 CCP operation
8.2.1 CCP members and non-members
8.2.2 Process of clearing
8.2.3 Compression
8.2.4 Requirements for products to be cleared

8.3 CCP risk management
8.3.1 Overview
8.3.2 Membership requirements
8.3.3 Margining
8.3.4 Margin interest rates

8.4 Default management
8.4.1 Declaring a default
8.4.2 Close out process
8.4.3 Auction
8.4.4 Client positions
8.4.5 Loss allocation
8.4.6 Wrong-way risk

8.5 CCP linkage
8.5.1 Interoperability
8.5.2 Participant and peer-to-peer models
8.5.3 Mutual offset
8.5.4 Cross-margining
9 Margin and Default Fund Methodologies

9.1 Variation margin
9.1.1 Valuation
9.1.2 Frequency of margin calls
9.1.3 Convexity and price alignment interest
9.1.4 Variation margin and liquidity risk

9.2 Initial margin
9.2.1 Close out period
9.2.2 Coverage
9.2.3 Linkage to credit quality
9.2.4 Haircuts and non-cash margins
9.2.5 The SPAN methodology

9.3 VAR and historical simulation
9.3.1 Value-at-risk and expected shortfall
9.3.2 Historical simulation
9.3.3 Look-back periods
9.3.4 Relative and absolute scenarios
9.3.5 Procyclicality

9.4 Initial margins for OTC derivatives
9.4.1 Requirements for initial margin approach
9.4.2 OTC CCP initial margin approaches
9.4.3 Competition
9.4.4 Computation considerations
9.4.5 Standard initial margin model (SIMM)

9.5 Cross-margining
9.5.1 Rationale
9.5.2 Cross-margining within a CCP
9.5.3 Exchange-traded and OTC products
9.5.4 Cross-margining between CCPs
9.5.5 Methodologies for cross-margining

9.6 Default funds
9.6.1 Coverage of initial margin
9.6.2 Role of the default fund
9.6.3 Default fund vs. initial margin
9.6.4 Size of the default fund
9.6.5 Splitting default funds

10 The Loss Waterfall and Loss Allocation Methods

10.1 Potential CCP loss events
10.1.1 Review of the loss waterfall
10.1.2 Clearing member default losses
10.1.3 Non-default related losses

10.2 Analysis of CCP loss structure
10.2.1 Second loss exposure
10.2.2 The prisoner’s dilemma
10.2.3 Unlimited default fund contributions
10.2.4 Default fund tranches
10.3 Other loss allocation methods

10.3.1 Variation margin gains haircutting

10.3.2 Partial tear-up and forced allocation

10.3.3 Complete tear-up

10.3.4 Other methods

10.3.5 Impact on client trades

10.3.6 Methods used in practice

10.4 Capital charges for CCP exposures

10.4.1 Qualifying CCPs

10.4.2 Trade and default fund related exposures

10.4.3 Capital requirements for trade exposures

10.4.4 Capital requirements for default fund exposures

10.4.5 Method 1 (interim rules)

10.4.6 Method 2 (interim rules)

10.4.7 Final rules

10.4.8 Example and discussion

10.4.9 Client clearing and bilateral aspects

Appendix 10A: Technical details on the interim and final rules

11 Client Clearing, Segregation and Portability

11.1 Operational aspects

11.1.1 General setup

11.1.2 Principal-to-principal model

11.1.3 Agency model

11.1.4 Margin requirements between client and CCP

11.1.5 Client point of view

11.1.6 Clearing member point of view

11.1.7 Portability

11.2 Segregation, rehypothecation and margin offset

11.2.1 The need for segregation

11.2.2 The difference between variation and initial margins

11.2.3 Net and gross margin

11.2.4 Net margin and portability

11.3 Methods of segregation

11.3.1 Omnibus segregation

11.3.2 Individually segregated accounts

11.3.3 LSOC

11.3.4 Example

11.3.5 The liquidity impact of segregation

11.4 Regulatory requirements

11.4.1 CPSS-IOSCO

11.4.2 Dodd–Frank/CFTC

11.4.3 EMIR

11.4.4 Basel III and capital implications
PART IV: ANALYSIS OF THE IMPACT AND RISKS OF CENTRAL CLEARING 231

12 Analysis of the Impact of Clearing and Margining 233

12.1 The clearing landscape 233
12.1.1 Bilateral vs. central clearing 233
12.1.2 How much is currently cleared? 236
12.1.3 What should be cleared? 236
12.1.4 The number of CCPs 238
12.1.5 Choosing a CCP 239

12.2 Benefits and drawbacks of OTC clearing 240
12.2.1 Advantages 240
12.2.2 Disadvantages 241
12.2.3 Homogenisation 242
12.2.4 Moral hazard and informational asymmetry 243

12.3 Side effects 243
12.3.1 Futurisation 243
12.3.2 Regulatory arbitrage 244
12.3.3 Netting optimisation 246
12.3.4 Re-leveraging 246
12.3.5 Pricing behaviour 247

12.4 Is there a better idea? 248

13 The Cost and Impact of Clearing and Margining 251

13.1 Overview 251
13.1.1 Strengths and weaknesses of margin 251
13.1.2 Variation margin 252
13.1.3 Initial margin 253

13.2 Examples 254
13.2.1 American International Group (AIG) 254
13.2.2 The BP Deepwater Horizon oil spill 254
13.2.3 Ashanti 255

13.3 The cost of margining 256
13.3.1 Margin and funding 256
13.3.2 How expensive? 257
13.3.3 Variation margin 259
13.3.4 Initial margin 261
13.3.5 Converting counterparty risk to liquidity risk 261
13.3.6 Manifestation of funding liquidity risks 263

13.4 Implications 264

14 Risks Caused by CCPs 265

14.1 Overview 265
14.1.1 General risks created by CCPs 265
14.1.2 Risks for clearing members 266
14.1.3 Risks for non-clearing members 266

14.2 Historical CCP failures and near misses 267
14.2.1 New York Gold Exchange Bank (1869) 267
