

DECARBONISING THE WORLD'S ECONOMY

Assessing the Feasibility of Policies to
Reduce Greenhouse Gas Emissions

editors

Terry Barker

University of Cambridge, UK

Douglas Crawford-Brown

University of Cambridge, UK

Contents

Introduction	1
<i>Terry Barker</i>	
Chapter 1 The Case for Decarbonisation	5
<i>Douglas Crawford-Brown and Martin Sewell</i>	
1.1. Introduction to the Science of Climate Change Risk	5
1.2. Ethical, Political and Legal Considerations in Decarbonisation	15
1.3. Conclusions	22
References	25
Chapter 2 Policies and Measures for Mitigating Climate Change	29
<i>Paul Haynes and Yongfu Huang</i>	
2.1. Introduction	29
2.2. Classifying Policy Instruments	29
2.3. National versus International Policies	32
2.4. Regulatory Standards: Command and Control Instruments	33
2.5. Market-based Instruments	35
2.5.1. Taxation and removal of subsidies	36
2.5.2. Emissions trading or carbon markets	37

2.6. Financial Instruments	39
2.6.1. Domestic financial mechanisms	40
2.6.2. International financial mechanisms	42
2.7. The Policy Mix and Interactions between Policies	43
References	48
Chapter 3 Scenario Design for a Global Low-carbon Economy	51
<i>Jun Li and Aleix Altimiras-Martin</i>	
3.1. Introduction to the Scenario Review	51
3.1.1. The role of scenarios	51
3.1.2. A framework for environmental issues	52
3.1.3. Reference and low-carbon scenarios	54
3.2. The SRES and IPCC AR5 Scenarios in the Context of Global Low-carbon Scenarios	55
3.2.1. Overview	55
3.2.2. SRES main features	56
3.2.3. SRES in the context of new low-carbon scenarios	59
3.2.4. Methodological issues in the SRES scenarios	60
3.2.5. Disagreements with specific assumptions of the SRES scenarios	62
3.2.6. The new AR5 scenarios	62
3.3. The IEA Scenarios	64
3.3.1. The World Energy Outlook 2008, 2009 and 2010	64
3.3.2. Energy Technology Perspectives 2010	68
3.3.3. Criticisms of the IEA scenarios	71
3.4. Previous E3MG Scenarios	72
3.5. Scenarios Design for Modelling a Low-carbon Economy	74
3.5.1. Learning from past scenarios	74
3.5.2. The driving forces	75
3.6. E3MG Emission Scenarios for this Book	78
3.6.1. The Reference Scenario	79
3.6.2. The decarbonisation scenario	79
3.6.3. The policies evaluation scenarios	79
References	80

Chapter 4	Modelling Decarbonisation Scenarios	85
	<i>Annela Anger, Terry Barker and Mark Syddall</i>	
4.1.	Modelling Decarbonisation	85
4.2.	Modelling the Costs and Benefits of Mitigation	86
4.2.1.	The use of GDP to measure costs	87
4.3.	Literature on Decarbonising the Economy to Achieve the 2°C Target	88
4.3.1.	Failure to take account of induced technological change adequately	89
4.3.1.1.	ITC in top-down economic models	90
4.3.1.2.	The crowding out of low-GHG R&D and investment	91
4.3.2.	Omission of critical opportunities for substitution (e.g. electric for petrol-powered vehicles)	92
4.3.3.	Low substitution elasticities for fossil fuel energy use in response to relative price effects	94
4.3.4.	Omission of regulatory and other instruments in the model (e.g. no regulation on standards for energy efficiency)	94
4.3.4.1.	Modelling portfolios of policies	95
4.3.5.	Conclusions from the literature on stringent decarbonisation	97
4.4.	The Modelling Approach used for this Study	98
4.4.1.	A short description of E3MG	98
4.5.	The Ability of E3MG to Fit the Past	101
4.6.	Developing the Reference and Decarbonisation Scenarios	103
4.6.1.	Using E3MG to model emissions trading schemes for the energy sector	105
4.6.2.	The world oil price, decarbonisation and the global energy market	108
4.6.3.	Additional investment and regulation	110
4.7.	Impacts of Decarbonisation on the Global Economy	111
4.8.	The Resilience of the Policy Mix	117
4.8.1.	The effects of higher oil prices	117
4.8.2.	The effects of lower world growth	117
	References	119

Chapter 5	The Economic Feasibility of Policies for Decarbonisation	123
	<i>Terry Barker, Annela Anger and Hector Pollitt</i>	
5.1.	Introduction	123
5.2.	The Price of Carbon and Decarbonisation	125
5.2.1.	The carbon price as representing a global economic externality	125
5.2.2.	Policy instruments to generate a price of carbon	127
5.2.3.	Achieving decarbonisation by price alone	128
5.3.	Emissions Trading Schemes and Other Policies	130
5.3.1.	Allocation of ETS allowances by benchmarking or auctioning	130
5.3.2.	The effects on GDP of recycling revenues from carbon taxes and permits	132
5.3.3.	World oil prices and decarbonisation	136
5.4.	Regulations for Decarbonisation of Buildings, Industry and Transport	137
5.5.	Reduction of Fossil Fuel Subsidies	140
5.6.	Effects of a Policy Portfolio for Decarbonisation on GDP Growth and Employment	142
5.6.1.	Introduction and previous modelling for IPCC/EMF	142
5.6.2.	The effects of the policy mix on global GDP growth	143
5.7.	Conclusions on the Economic Feasibility of Decarbonisation	146
	References	148
Chapter 6	Feasibility of Decarbonisation from a Technology Perspective	151
	<i>J.-F. Mercure and Pablo Salas</i>	
6.1.	Introduction	151
6.2.	Energy Sector Dynamics	153
6.2.1.	Dynamics of change	153
6.2.2.	Technological learning	156

6.2.3. Technical potentials and cost–supply curves	157
6.2.4. Learning changes cost–supply curves	161
6.2.5. Emission rates and carbon costs as a source of change	162
6.2.6. The levelised cost of electricity	163
6.2.7. Induced technological change	165
6.2.8. The economic potential of energy resources	168
6.3. Global Energy Resources and Technologies	170
6.3.1. Renewable energy resources	170
6.3.1.1. Wind power	171
6.3.1.2. Solar energy	174
6.3.1.3. Hydroelectricity	177
6.3.1.4. Geothermal energy	179
6.3.1.5. Ocean Energy	181
6.3.1.6. Bioenergy	184
6.3.1.7. Potential biomass resources and cost–supply curves	185
6.3.1.8. Bioelectricity and biofuels	186
6.3.2. Nuclear energy	187
6.3.2.1. Nuclear technology	187
6.3.2.2. Global resources of fissile materials	190
6.3.3. Fossil fuels	191
6.3.3.1. Introduction	191
6.3.3.2. Global fossil resources and cost–supply curves	192
6.3.3.3. Fossil fuel resources, GHG emissions and climate change	194
6.4. Carbon Capture and Storage and its Constraints	196
6.4.1. Global CO ₂ storage capacity	196
6.4.2. CCS in combination with biomass and negative emissions	198
6.5. The Feasibility of Decarbonisation in Terms of Natural Resources	199
6.5.1. Meeting demand and supply for power	199
6.5.2. Scenarios for the exploitation of exhaustible resources	200

6.5.3.	Calculation of cost–flow curves	202
6.5.4.	Cost–flow curves for exhaustible resources	204
6.5.5.	Possible range of future total primary energy demand	205
6.5.6.	Cost–supply and cost–flow curves as a tool for energy planning	207
6.5.7.	The replacement of fossil fuels by renewable energy	208
6.5.8.	The decarbonisation of the global economy before 2100	210
6.5.9.	The decarbonisation of the global economy before 2100 (biomass)	212
6.5.10.	Decarbonisation, land use and the natural environment	213
6.6.	Conclusions	214
	References	216
Chapter 7	Feasibility of Reducing Emissions by End-use Sector	223
	<i>Scott Kelly, Andrew Skelton and Aleix Altimiras-Martin</i>	
7.1.	Introduction	223
7.2.	Buildings	227
7.2.1.	The problem	227
7.2.2.	The solution	232
7.3.	Decarbonising Transport	235
7.3.1.	The problem	236
7.3.2.	The solution: A new approach to thinking about travel	240
7.4.	Industrial Sector	242
7.5.	The Role of MNEs	247
7.6.	Conclusions	254
	References	255

Chapter 8	From Theory to Practice: Climate Policy and Political Feasibility	259
	<i>Sonja Klinsky and Michael Grubb</i>	
8.1.	Introduction	259
8.2.	Political Feasibility	264
8.3.	Carbon Pricing	266
8.3.1.	North American carbon taxes	267
8.3.2.	Clinton's energy tax	267
8.3.3.	BC carbon tax	269
8.3.4.	Canadian federal carbon tax	271
8.3.5.	North American cap-and-trade system	272
8.3.6.	Regional Greenhouse Gas Initiative	274
8.3.7.	Western Climate Initiative	277
8.3.8.	European carbon pricing	280
8.3.9.	The EU Emissions Trading Scheme	281
8.3.10.	Key design features of the EU ETS	283
	8.3.10.1. Phase I: 2005–2007	285
	8.3.10.2. Phase II: The allocation battle	286
	8.3.10.3. Into Phase III	289
8.4.	Regulations and Standard Setting	290
8.5.	Discussion	295
8.5.1.	Policy evolution	296
8.5.2.	Policy framing	297
8.5.3.	Non-state actors	298
8.5.4.	Collective action	300
8.5.5.	Institutional structure	301
	References	302
Chapter 9	Co-impacts of a Decarbonised Economy	309
	<i>Douglas Crawford-Brown and Ann Thompson</i>	
9.1.	Introduction to Co-impacts	309
9.2.	Co-benefits to Human Health	315
9.2.1.	Method of estimating co-benefits for PM reduction	316
9.2.2.	Applying the methodology	322
9.2.3.	Policy implications	325

9.3. Water, Food and Energy	327
9.3.1. Co-impacts of policies relating to land use and land-use change	328
9.3.2. Biomass and bioenergy	330
9.3.3. The technical potential of biomass	330
9.3.4. Growth of bioenergy and pressure on land and water resources	331
9.3.5. Reducing GHG emissions from land-use change	332
9.3.6. Co-impacts from reducing GHG emissions from fertilisers	333
9.3.7. Co-impacts from REDD+ and finance for low-carbon development	334
9.3.8. Conclusions on co-impacts relating to food, energy and water	335
References	336
Chapter 10 Conclusions	341
<i>Terry Barker</i>	
10.1. The Basis from Climate Science for Global Decarbonisation	341
10.2. Policies and Measures for Decarbonisation	342
10.3. Scenarios for Assessing Decarbonisation	343
10.4. The Economic Feasibility of Decarbonisation	344
10.5. Transforming the Energy Sector	345
10.6. End-use Decarbonisation	346
10.7. The Political Feasibility of Decarbonisation	347
10.8. Co-benefits of Decarbonisation	349
10.9. Conclusion	350
