1 INTRODUCTION AND STRUCTURE OF THE THESIS

2 INSTITUTIONAL DETERMINANTS OF BALANCE OF PAYMENTS DYNAMICS: A FIRST LITERATURE SURVEY

2.1 Introduction

2.2 The Current Account – Ex-IM, Trade and Institutions

2.2.1 Institutions and trade: imports, exports, or both?

2.2.2 Institutions and product complexity: How are exports affected?

2.2.3 Institutions and terms of trade improvement: Is there a connection?

2.2.4 Summing up – do better institutions activate the current account?

2.3 S-I: The savings-investment gap and the current account

2.3.1 Remarks onto the primacy of intertemporal optimization vs. export determinacy of the current account

2.3.2 Explanations for the savings-investment gap approximated by the current account balance

2.3.3 Institutional influences on aggregate savings formation

2.3.4 Institutional influences on gross fixed capital formation, public and private investment and its interrelation

2.3.5 The interrelation of public and private investment volumes depending on the institutional setting

2.3.6 Conclusion: The influence of institutions on the savings-investment gap and the current account

2.4 The financial account and institutions

2.4.1 Institutions and private capital inflows: is there a relation?

2.4.2 Institutions and capital inflows: which types seem to be more affected?

2.4.3 Foreign capital and export performance

2.4.4 Conclusion: the financial account and institutions

2.5 BoP dynamics and institutional determinants – what have we learned?

3 INSTITUTIONS AND SAVINGS IN DEVELOPING AND EMERGING ECONOMIES

3.1 Introduction

3.2 Institutions and savings: a theoretical primer

3.3 Literature review: institutions, growth and savings determinants

3.3.1 Institutions and growth

3.3.2 Drivers of aggregate savings: empirical evidence

3.4 Econometric issues

3.4.1 Dataset description

3.4.2 Estimation model choices

3.5 Results

3.5.1 Baseline model and core hypothesis

3.5.2 Higher-order (political) institutions

3.5.3 Lower-order institutions

3.5.4 Economic freedom as a special form of a ‘lower-order institution’

3.6 Robustness

3.6.1 Alternative and additional control variables

3.6.2 Alternative timing and modeling
