Introduction	<i>i</i>
---------------------	----------

I Economic principles

Incentives matter	2
There are always trade-offs—there’s no such thing as a free lunch	4
People make decisions on the margin	8
Voluntary trade is a win-win proposition	11
People earn income and become wealthy by helping others	14
Workers can only consume more if they first produce more	16
Savings and investment today allow for greater prosperity in the future	19
Prices provide valuable information to buyers and sellers	22
Profits harness self interest to guide entrepreneurs in using scarce resources efficiently	25
Policymakers must consider the long-term and “unseen” consequences of their actions	29

II Institutional prerequisites essential for economic progress

An unbiased legal system	34
Limited government regulations	38
Competitive markets	46
An efficient financial market	49
Sound money	55
Low, uniform tax rates	59
Low trade barriers	65

Contents, continued

III Economic myths and how they prevent progress

Myths based on empirical mistakes

Reforming Canadian health care means a US system	73
Canada spends considerably more on public education than the US	80
Government workers are poorly paid compared to their private sector counterparts	82
The rich don't pay their fair share in taxes	85
The minimum wage helps underpaid, underskilled workers	88
Today's poor are tomorrow's poor	90
Economic growth and environmental protection are incompatible	93
Natural resources are scarce and we will eventually run out, so the government should carefully ration their usage	99
Canadians are more generous than Americans	103

Myths based on conceptual mistakes

There are market failures, but not government failures	105
The cost of government is the dollar amount of tax revenue it collects	110
The success of an economic event is measured by how many jobs it creates	114
Canada suffers from a "resource curse"	118
Only the government can redistribute income, or provide public goods	121
Government-owned and operated services save money for consumers because they eliminate the middleman's markup, allowing for lower prices	124
